Attention lovers of old Goldy Knobs!

Have the following for sale:

Browning Golden Eagle Mark III. 23 channel base modified to 40 channel with VFO. Works fine & is run daily. Very nice condition, original stock mike base missing but replaced with hand made wooden base w/Eagle. Although works cannot guarantee after shipping so being sold "as is". $350 firm plus shipping.

No auctions, no haggling.
Email rclanton@nii.net for details. Payment to be money order sent in advance for full amount.

You may want to try getting in touch with the 'Electronic Equipment Bank' of Vienna Virginia. I bought my miniscope from them, and they do repairs. I have long ago sold my miniscope to a company I did work for. And I am unable to supply you with the schematic at this time.

9. Need Advice on O-Scope

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-01 00:00:00 UTC
From: PR <special@rochester.rr.com>
Message-ID: <XfnZ4.2003$sd.21573@typhoon.nyroc.rr.com>
Source record: 65876

I am planning on buying an Oscilloscope this weekend at the Rochester Hamfest. I would like to find one that is of adequate quality to work on Boat Anchors and possible newer equipment. Could anyone give me some pointers here on what to look for ?

Thanks for the Bandwidth

10. WTB: B&W Swinging link

John,

why post a query about British equipment in a foreign ng - and then complain
of a nil response? If you ask in a British group - such as uk.r.a for a
start - and then move on to an email list like the uk vintage radio list -
you are more likely to find what you are looking for.

And, sorry, I can't help with either the B40 or P104 - but there are plenty
of people in the UK familiar with both.

12. Who Sold Me an Apache?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-01 00:00:00 UTC
From: Denis Sharon <denis.sharon@worldnet.att.net>
Message-ID: <v%sZ4.1447$4%6.78932@bgtnsc05-news.ops.worldnet.att.net>
Source record: 65879

Help! A nice gentleman sold me a very clean Heath Apache with an SB-10 sideband adapter at the Rochester, NH hamfest. He told me that he had the manuals for them and would be glad to send them to me. That's the good news. The bad news is that we parted company without exchanging names and addresses. Bummer!

So, if you are that person OR if you have any idea who it might be, PLEASE contact me. (Hint: The seller was leaving early to attend a wedding. Does that help?)

Thanks,

Denis Sharon W1AOK
Ridgefield, CT

From: ovrreactor@aol.com-nospam (OvrReactor)
Subject: FS / FT: Assorted capacitors

I have WAY too much stuff in the garage, So I’ve decided to thin out my capacitors so I can have some shelf space. I’ll also consider trading the capacitors listed below for NOS compactron sockets, if you have any. I’m also looking for 20EZ7’s, 4HA7’s, and 5HA7’s. Anyway, here’s what I have;

(100) - 33 uF 16 V radial electrolytic - Panasonic
$4 ALL

(20) - 22 uF 250 V radial electrolytic - Illinois Capacitor
$8 ALL

(165) - 5 uF 10 V axial electrolytic
$5 ALL

(100) - 25 uF 20 V axial electrolytic - Mallory
$8 ALL

(100) - 10 pF NPO ceramic disc
$4 ALL

(200) - 39 pF 200 V monolithic ceramic CK05 radial - Mallory
$8 ALL

Pictures of the capacitors can be seen at;
http://members.aol.com/ecc81/yardsale/capacitors.html

Interested? Please respond by email to < OvrReactor@aol.com >.

Also, I have a bunch of items (52, actually), listed on eBay (...sorry), with a starting bid of $1.00, no reserve. Check out;

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=over-reactor

The list of items up for auction is below. Thanks for helping me make space for NEW junk,

Regards,
Tom Mitchell

Subject: FS: ARC5 receivers

In order to decide if these radios are worth buying,
we need to know condition of the receivers (modified? unmodified?
complete?)and what is written on
the nomenclature plates and rear of the chassis.
Thanks,
D.S.

Subject: FS: Hallicrafters S20R

Hi All,
I have a Hallicrafters S20R for sale. It is all original, knobs, bottom plate,
everything. I don't want to chopitup for parts as it is quite restorable. The
only thing that I can see that is missing are the 2 strips on the sides. I
believe that it is functional, but the buyer should put it on a variac to make

sure that it doesnt fry. I have 2 photos that I can send to interested buyers.
I am asking $80.00 for this vintage set. Email me directly for the photos at:
nc183d@aol.com and see for yourself...The buyer pays shipping for this item.
rgds,
Mark S.

Subject: FS: Manual copies for TV-7D(*) Tube Tester

I will be making a copy of my 1960 original TM11-6625-274-12 for a
friend. This is the Operators and Organizational Maintenance manual
for the TV-7(*) series tube testers. It will be a high quality copy
including the schematic and switch chart which is not found in the
Operators manual. It is from the Depot Maintenance manual but I
thought it would be good to include it.

I am willing to make more copies while I am at the copy center as I am
there anyways with the manual so if you need a copy please e-mail me.
Cost will be $12.00 mailed in the USA. I will mail overseas but the
postage costs will be higher depending on where it will be mailed to.

Cordially,

Michael Crestohl

From: "J.Parry"
Subject: KW Vanguard/FL2000 linear.

Hi,

I'm having a shack claret and have a Vanguard and an FL2000 for
disposal.

The Vanguard is a cw/am rig made by KW Electronics here
in the UK and I

had intended to use it in conjunction with an old receiver for
setting up an

AM station. The rig is quite big and heavy (a proper boatanchor!)
and I would

imagine runs 100 watts.

The Vanguard and the FL2000 (I have the original packing for
the linear)

are both in good condition and I will either sell (I don't
know what they

are worth so am open to offers...) or exchange for anything
interesting.

I'm interested in receivers generally.

Cheers and best 73's, de

John GW3VVC

From: "Tetrode"
Subject: BOSTON BA's?

Bean town is all pooped out of good BA places, or any BA places as far as I
know. Years ago there used to be places like Meshna and Young Engineering
that were pretty good.

Your best bet is to take a drive out of town.

There is a Ham Radio Outlet in Salem, NH, which is about 40 minutes up RT93. Its mostly all the new stuff but they do have a small consignment shelf.

But for a real treat venture a couple hours north to Pi-exx in Hillsboro, NH.
Chris Sieg has an electronics business there with a large inventory of boatanchor radio gear. (If you ask nice he might let you wander around the back). It's not too often you can walk down a main street in a little town and see a store front window with Collins and Heath radios in it! Recommend you call him at 603-464-5411 before attempting a visit.

Have fun in Bah-ston!

Subject: Central Electronics 10A sideband exciter FS

I have a CE model 10A sideband exciter. It is a piece of history, being the first sideband transmitter available to hams. It is the old phasing type unit. It doesn't use any crystal filters. It's been sitting in an attic for years, or decades. Appears to be all there, though. I even have the original manual for it. Condition is dirty, but could be cleaned up and got working, again. $75 plus a few for shipping. 73 de Jim, W7LS

Subject: Drake TR-6/RV-6 station A Little over 1 DAY REMAINING ON EBAY

Collector Quality Drake TR-6 with rare matching RV-6 remote VFO, Power supply, NB-9 noise blanker installed and (not shown) Drake 7075 microphone. This station is absolutely beautiful cosmetically and electrically. Very little use since new. It has the original Sylvania tubes in it and delivers full output. Extra crystals installed in some of the slots. The factory NB-9 noise blanker works well supressing most QRM and elecrtical noise. The 7075 microphone makes good use of one’s voices harmonics and has a smooth tone. I have the original manual for the TR-6 but not the RV-6 and 7075 microphone. If you want to catch some of the terrific E-skip this season on SSB/CW or want to work AM on 50.400 here's a chance to do it with something other than a Yaecomwoods out of the box radio. I guarantee it to be working when it arrives but no other guarantee is expressed or implied. The pictures shown here are grainy and lack detail. They do not do it justice. Unfortunately, I do not have a better digital camera. Please email me if you have any questions. I’d prefer the lucky winner of this station pick it up at my home but I will pack it very carefully and ship internationally if need be. Payment to be in U.S. funds only. Reason for selling: I recently upgraded my license and prefer to concentrate my operating time on HF. If there were a Drake museum and they needed a six meter station to fill the slot and use every day; this would be the radio to do it with. Happy bidding and good luck. Please go to my URL for pictures since it's not showing up on ebay: http://hometown.aol.com/yardleyite/index.html

From: worley@07snowhill.com
Subject: FS: APS-104 radar modulator

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "07" to reply or call 334-347-5281 day/eve.

Subject: FS:Sams Photofacts sets1-1900+

Hi guys,

Today i came across a bunch of original Howard W. Sams & Co. "Photofact" --
7 filing cabinets from set no. 1 - 1900+ or there abouts. I loaded up sets
no. 1-585 which is all i could carry. I could piece meal them out on ebay I
suppose or try to sell the lot. Is there any one intrested in them? Or give
me some suggestions on unloading them.
They seem very complete with Cumulative index from sets No.1 starting from
6-1946.. Besides the radio service data folders sets 1-1900+ there are
dozens of Photofact books and plenty of notebooks full of service data.
Thanks, Steve N6TT@jps.net

From: Badkitty
Subject: HELP! need info on marine receiver.

Recently acquired this old receiver and would like to find a schematic before I "dig in".

It's a Radiomarine Corporation Of America model AR-6506-B Mfd. in Aug. of 1944. 5 bands. Seen here:
http://members.xoom.com/dc265/radio/May/P0000465sc.JPG
http://members.xoom.com/dc265/radio/May/P0000466sc.JPG
Looking at the date and the lack of any military markings, I'm guessing this was made for the Merchant Marine Service. I've never seen shielding like this before. (3 layers)

Where could I find some documentation on this barge?

Subject: History Project.

The Town I live in will be celebrating it's sesqui-centennial in 2003.
Our local funeral director (it's a small town) gave a presentation last
night with a large collection of early town memorabilia, and our
librarian has received grant money to work on the project.

Over coffee this AM, I said to myself, "Self, surely Joe and you
aren't the only hams to have ever tickled the airwaves from this
corner of the world..."

So, here's the request:

I am looking for anything ham radio related that refers to
Brookston, Indiana, Prairie Township, and/or White County,
Indiana. QSL cards, pictures, rememberances, anything. Don't
have much hope of finding anything, since Brookston is a small
rural Indiana town (but it's a good place to call home) But I thought
there might be an ancient QSL card floating around somewhere.

Thanks, and 73,
John WB9OFG

Subject: MD Hamfest - June 18th

The Frederick Amateur Radio Club (FARC) presents the annual
Father's Day Hamfest on Sunday, June 18, 2000
from 8:00am to 3:00pm, rain or shine.
(Access for tailgaters opens at 6:00am)

It's at the Frederick County Fairgrounds on East Patrick Street in
historic Frederick, Maryland. Easy access from I-70 and I-270,
plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating,
Indoor Commercial Vendors, VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00 donation.
Tailgating spaces are $5.00 each + general admission
Indoor tables are $10.00 each before June 10th, $15.00 after.

One of the largest and most popular hamfests in the
Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net

Thanks & 73,
Bob K9CMR

From: "NANCY GIANAKOPOULOS"
Subject: NC-183D/NC-300 Comparison

Actually, in terms of sensitivity, the Drake 2B will receive as well as most of today's receivers. It may not be as good, in terms of ultimate channel selectivity, stability, etc. The National NC300 was also a very good receiver; it boasted a NF of right around 8dB. The problem is that many of the boatanchors need to be revamped; you know the story, things such as cathode bypass caps, biasing resistors which have changes value over the years, changing the Q point of the tubes.
On a final note, I would say that if you find one of these receivers in proper operating condition, they are great! I've had sever of them myself. As far as the NC183D; that receiver was nothing ever to write home about; the HRO60 was a much better unit. Now if I could have gotten an NC400.....

2:50 AM

OhmyGod,

I'm reading along, digesting one after another perfectly rational post
about radios, and...suddenly...I'VE FALLEN INTO THE WORLD OF PARANOID

IGNORAMUSES. Folks, do you have any conception of how stupid...er, ignorant...you sound?

If I had any doubt of my pro-gun control position, it would only take one or two exhibitions such as this of the caliber of thought on the other side to firm up my conviction.

How could you improve your clarity of thought? To begin with, recognize there is NO rational connection between your gun and your frequencies: One is an object expressly designed to injure people, therefore inherently more dangerous than almost any other object available to us in daily life, and the other is NOT.

Another hint: Scientific studies regarding the danger, if any, of exposure to RF, are not at all likely to have been designed to take away your frequencies, even if funded by the government. Why? Because, first, they will be conducted by SCIENTISTS, and scientists actually tend to be interested in discovering truth, and therefore in testing the things they discover against nature How do you think you got the technology to access your frequencies in the first place? Through the activities of scientists, testing their truths over and over until they got them right. Such people will not lie lightly.
Second, even if the scientists did lie, it is extremely unlikely that they could make any sensible person believe that RF was so dangerous as to justify preventing anyone from experimenting with it, who was willing to run the personal risk. Look at cigarettes. Though proven to be extremely dangerous, it has taken 30 YEARS for the tide of public opinion to turn against them, and still almost no-one suggests outlawing them. This is because we who are anti-smoking are rational enough to know what hardship that would cause to existing smokers.

In other words, for God's sake set aside the paranoia and learn to think clearly. There is still hope for you.

Hey Guys and Gals,

This is the United States, remember? That means there are a lot of RICH
PEOPLE OUT THERE. How hard is it to spend $3500 for a toy when your income
is, say, $10,000,000 a year. (Lots of our CEOs make more.)

Or do you just like to cling to the comforting notion that everyone in the
good old USA is "middle class'?

Subject: What a Bargain !

I believe that some people resent ebay, because of the effect that
these astronomical auctions seem to have on the relative value of used
ham gear. Remember, very few of us hams are rich, yet most of us would
love to have collections to one degree or another.
While you can't hold it against someone for wanting top dollar for
their gear, some of the critics of ebay are concerned about the long
term effects on prices which are rising faster than their paychecks.
On the other hand, most critics seem to dislike ebay because they
can't "make a killing" on a everything that they see and want. Ebay
seems to strip them of their ability to pursuade people to lower their
price to what the buyer wants to pay.

For Sale or Trade or Will Part Out- I have 2- Heath HW101 Transceivers that have minor (I think) problems. I am moving, so I need to move these. They are both on good to very good condition and have a manual and power supply (HeathPS23) that works fine. I will also include the matching HS-1681 speaker for $ 225.00 shipped or trade for ? If I do not get any takers, I will part out these rigs, so send me a list of what you need.

I also have a SB102Transceiver/SB600Speaker/HP23 in good condition. If interested e-mail me and I will give you details.

I also have a 400Hz. Cw filter for these at $50.00 shipped.
E-mail to n5nbk@nortexinfo.net
Thanks- Dan N5NBK

Sent via Deja.com http://www.deja.com/

> I am planning on buying an Oscilloscope this weekend at the Rochester
> Hamfest. I would like to find one that is of adequate quality to work on
> Boat Anchors and possible newer equipment. Could anyone give me some
> pointers here on what to look for ?

Bandwidth is important, and is not usually printed on the face
of the scope anywhere.
BW should be about 5x-10x the BW of the signal you want to
look at. Think about it- if you try to look at a 10 MHz square
wave signal with a 10 MHz BW scope what will you see?
You'll see something approaching a sine wave! By having
5x-10x BW, the waveform will look more like a square wave
because the harmonics are within the BW of the scope.

For audio, a cheapy (one that has 5 way binding posts for input)
may be adequate.

Size is also important. If you get one of those great, hulking old
Teks with about 30
tubes, the thing will be so big that you'll find it hard to use unless
you get a cart to go with it. Then you'll spend more time trouble
shooting the scope than you will the circuits you want to use the
scope on.

I have a AN/USM338 which is a 50MHz dual trace HP scope.
I have seen many at swap meets and bought mine
for $50 a year or so ago. It is solid state except
for the CRT, and since it was built to mil specs, it works well.
Fair Radio Sales has them for $350, but you should be able to
find one for <$100 at a good sized ham fest. It is relatively small
and easily sits on a bench without taking up the whole bench.
It is also light enough to move around without a cart.

Another thing to think about is probes. I spent more on probes
for my scope than I did on the scope- you need probes that are
rated for at least the same BW as the scope (higher is better)
and they must have capacitance that matches the input range of
the scope (usually printed on the front of the scope at the input
ports). Tektronix has some good ap notes about selecting scope
probes - check their web pages.
Be prepared to spend $50-100 per probe (new units) for BW of
50 MHz or higher. The BW of the probe is in 10X mode- i.e.
when the probe is dividing the input voltage by 10. If you switch
a probe for 1X, the BW drops significantly.

Good hunting!
MR

Source record: 65889

For a good RF sink, use as large a ground plane as you can create in your apartment. Even if it is not a quarter wavelength across or more, it will still act as a capacitive object to free space, and present a relatively low impedance (you can calculate its capacitance and thus, its impedance) to RF. Putting metal foil or sheet under the carpeting on the radio shack floor and running it up the wall to the ceiling is not out of line.

This does not, of course, replace an earth type safety ground. That is what the ground on your mains sockets is providing.

Cheers,

Cortland

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

25. Re: 'Good' Ground?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-01 00:00:00 UTC
From: Smith-Gaspard <w4ono@citrus.infi.net>
Message-ID: <39370241.1C7C7019@citrus.infi.net>
Source record: 65892

Greetings Adrian ...

I'm not sure if you are worried about a good equipment grounding connection (EGC) or a good R-F ground at a desired set frequency.

If you are concerned about a good EGC, do not trust the "bonding" wire in your electrical receptacle until you ... yourself ... or a qualified electrician tests the
bonding to earth ground. Your electrical codes are a little different in the U.K. as
compared to our National Electrical Code (NEC) we use here in the states. We are now using the 1999 edition which all new construction is committed.

You may create/improve your electrical EGC by installing a good bond (buss) using a number 10 AWG Cu (copper) connection to all of the chassis ground terminals on your equipment. Once all equipment is bonded to each other now comes the best part. You will need to run at least a number 6 AWG Cu or a number 4 AWG Al (aluminum) conductor from your third floor to the earth leaving at least eight (8) feet extra at the grade. Purchase two (2) ground rods
that are at least eight (8) feet in length and 5/8" dia. Install one ground rod as
close to your EGC from the third floor to grade and install the other ground rod

six (6) feet from the other ground rod. When you purchase the earth ground rods, purchase two (2) Cu grounding clamps ... one for each bond on the rods. Connect the electrical grounding conductor to the first earth ground rod using the grounding clamps and run the remainder of the electrical grounding conductor to the second grounding rod at the clamp.

This meets our 1999 edition of the NEC here in the States. One word of caution ... before running the long EGC from the outside of the third floor to grade ... please check the geometry first so as not to come into contact with any live (hot) existing conductors.

This installation will assure a good bond to earth, preclude ground loops, and eliminate any "hot" R-F on your communication(s) equipment when transmitting.

Good luck ... be safe ... let me know if you install the grounding system.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-02 00:00:00 UTC
From: "Howard L Ritter, Jr" <hlritter@mindspring.com>
Message-ID: <B55CAA81.25C%hlritter@mindspring.com>
Source record: 65797

Not a boatanchor, exactly. Appears to be a government-contract prototype "transmitter-receiver" by Magnavox Ft Wayne. No model number or description silk-screened on the front panel, but has a gov't nomenclature plate with blanks between parentheses in the designator, plus a part number and a contract number with an "88" that looks like it might represent the year.

Rack-mounted and about 2 ft deep, digital display window, keypad controlled, modular componentry, bristling with cooling fins, built like an R-390 in terms of robustness, must weigh close to 100 lbs. Beautiful piece of equipment and very competent-looking.

Anyone have any ideas or information? Post or email directly.

TIA,

--hlritter

30. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8h7fem$ij5$1@news.hawaii.edu>
Source record: 65798
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Looking to buy an original or good copy of the manual for a Dentron 160XV
160 meter transverter.

Regards,

Walt, W2OKF

32. help help for Yeasu FT-DX500

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-02 00:00:00 UTC
From: bea@mediahouse.it
Message-ID: <39376fe9.6499580@10.0.0.2>
Source record: 65800

I need help. I bought this transceiver but i have problems in tuning transmitter. As i can remember , to tune the transceiver, i have to put the rtx in tune mode, to make tuning of rf stages, but i cannot read any power. The only way of tuning is to put it in am mode.

What is the real correct power on ssb? (the reading on the wattmeter).

OK. Why worry about it? You won't lose a single brain cell unless
you're going to chew on it or sand it.

It is not a hazard unless it is peeling or otherwise unstable.

34. FA EV Mike model 619 wired for 8 pin KW

From: "Adrian"
Subject: 'Good' Ground?

Newbie question

Being in a 3rd floor apartment (with no garden access) how can I get a good
ground connection? Bearing in mind that the copper plumbing in the building
(like all electrical installations in the UK) is bonded to the electrical
ground at the consumer/meter unit.
Wouldn't there be a danger of either electrical interference or positive
potential from these copper pipes?

Hmmmm....advice welcomed

Thanks

Adrian

From: brokebob@aol.com (Brokebob)
Subject: 'Good' Ground?

The ground pin on a valid 3 wire outlet is about as good as you can get as far
as RF is concerned. All that wiring acts as a counterpoise. Plug a tester in
the outlet to verify that the third wire is actully wired to the outlet.
brokebob@aol.com (broke=not working, retired=not working, retired=broke)

From: Cortland Richmond
Subject: 'Good' Ground?

For a good RF sink, use as large a ground plane as you can create in your
apartment. Even if it is not a quarter wavelength across or more, it will still
act as a capacitive object to free space, and present a relatively low impedance
(you can calculate its capacitance and thus, its impedance) to RF. Putting
metal foil or sheet under the carpeting on the radio shack floor and running it
up the wall to the ceiling is not out of line.

This does not, of course, replace an earth type safety ground. That is what the
ground on your mains sockets is providing.

Cheers,

Cortland

From: Smith-Gaspard
Subject: 'Good' Ground?

Greetings Adrian ...

I'm not sure if you are worried about a good equipment grounding connection (EGC) or a good R-F ground at a desired set frequency.

If you are concerned about a good EGC, do not trust the "bonding" wire in your electrical receptacle until you ... yourself ... or a qualified electrician tests the
bonding to earth ground. Your electrical codes are a little different in the U.K. as
compared to our National Electrical Code (NEC) we use here in the states. We are now using the 1999 edition which all new construction is committed.

You may create/improve your electrical EGC by installing a good bond (buss) using a number 10 AWG Cu (copper) connection to all of the chassis ground terminals on your equipment. Once all equipment is bonded to each other now comes the best part. You will need to run at least a number 6 AWG Cu or a number 4 AWG Al (aluminum) conductor from your third floor to the earth leaving at least eight (8) feet extra at the grade. Purchase two (2) ground rods
that are at least eight (8) feet in length and 5/8" dia. Install one ground rod as
close to your EGC from the third floor to grade and install the other ground rod

six (6) feet from the other ground rod. When you purchase the earth ground rods, purchase two (2) Cu grounding clamps ... one for each bond on the rods. Connect the electrical grounding conductor to the first earth ground rod using the grounding clamps and run the remainder of the electrical grounding conductor to the second grounding rod at the clamp.

This meets our 1999 edition of the NEC here in the States. One word of caution ... before running the long EGC from the outside of the third floor to grade ... please check the geometry first so as not to come into contact with any live (hot) existing conductors.

This installation will assure a good bond to earth, preclude ground loops, and eliminate any "hot" R-F on your communication(s) equipment when transmitting.

Good luck ... be safe ... let me know if you install the grounding system.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician

3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

John,

why post a query about British equipment in a foreign ng - and then complain
of a nil response? If you ask in a British group - such as uk.r.a for a

start - and then move on to an email list like the uk vintage radio list -
you are more likely to find what you are looking for.

And, sorry, I can't help with either the B40 or P104 - but there are plenty
of people in the UK familiar with both.

From: radiotek@pacbell.net (MAG Electronics)
Subject: CHEAP! FA: Hallicrafters SX-28A Super Skyrider 1940's Receiver

I have a really nice Hallicrafters SX-28A Super Skyrider HF-SW/VHF
Receiver for auction. This is in great condition and is from 1941-1944
vintage. This covers 550 kHz - 43 MHz; AM, SSB and CW modes.
It has a built-in AC Power Supply. I even have the ORIGINAL manual
for this puppy!

This was the finest, Top-Of-The-Line, HF Receiver from Hallicrafters
in the 1940's era. It's going cheap, and there is NO reserve!

Subject: FS or Part Out- Heath HW101

For Sale or Trade or Will Part Out- I have 2- Heath HW101 Transceivers
that have minor (I think) problems. I am moving, so I need to move
these. They are both on good to very good condition and have a manual
and power supply (HeathPS23) that works fine. I will also include the
matching HS-1681 speaker for $ 225.00 shipped or trade for ? If I do
not get any takers, I will part out these rigs, so send me a list of
what you need.

I also have a SB102Transceiver/SB600Speaker/HP23 in good condition. If
interested e-mail me and I will give you details.

I also have a 400Hz. Cw filter for these at $50.00 shipped.
E-mail to n5nbk@nortexinfo.net
Thanks- Dan N5NBK

Subject: help help for Yeasu FT-DX500

I need help. I bought this transceiver but i have problems in tuning
transmitter. As i can remember , to tune the transceiver, i have to
put the rtx in tune mode, to make tuning of rf stages, but i cannot
read any power. The only way of tuning is to put it in am mode.

What is the real correct power on ssb? (the reading on the wattmeter).

Subject: KW Vanguard/FL2000 linear.

oooops that should read shack 'clear out'....

"J.Parry" wrote:

Hi,

I'm having a shack claret and have a Vanguard and an FL2000 for
disposal.

The Vanguard is a cw/am rig made by KW Electronics here
in the UK and I

had intended to use it in conjunction with an old receiver for
setting up an

AM station. The rig is quite big and heavy (a proper boatanchor!)
and I would

imagine runs 100 watts.

The Vanguard and the FL2000 (I have the original packing for
the linear)

are both in good condition and I will either sell (I don't
know what they

are worth so am open to offers...) or exchange for anything
interesting.

I'm interested in receivers generally.

Cheers and best 73's, de

John GW3VVC

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: List of the rec.radio newsgroups

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)

rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

From: "Howard L Ritter, Jr"
Subject: Magnovox mystery rig-help!

Not a boatanchor, exactly. Appears to be a government-contract prototype
"transmitter-receiver" by Magnavox Ft Wayne. No model number or description
silk-screened on the front panel, but has a gov't nomenclature plate with
blanks between parentheses in the designator, plus a part number and a
contract number with an "88" that looks like it might represent the year.

Rack-mounted and about 2 ft deep, digital display window, keypad controlled,
modular componentry, bristling with cooling fins, built like an R-390 in
terms of robustness, must weigh close to 100 lbs. Beautiful piece of
equipment and very competent-looking.

Anyone have any ideas or information? Post or email directly.

TIA,

--hlritter

Subject: Need Advice on O-Scope

> I am planning on buying an Oscilloscope this weekend at the Rochester
> Hamfest. I would like to find one that is of adequate quality to work on
> Boat Anchors and possible newer equipment. Could anyone give me some
> pointers here on what to look for ?

Bandwidth is important, and is not usually printed on the face
of the scope anywhere.
BW should be about 5x-10x the BW of the signal you want to
look at. Think about it- if you try to look at a 10 MHz square
wave signal with a 10 MHz BW scope what will you see?

You'll see something approaching a sine wave! By having
5x-10x BW, the waveform will look more like a square wave
because the harmonics are within the BW of the scope.

For audio, a cheapy (one that has 5 way binding posts for input)
may be adequate.

Size is also important. If you get one of those great, hulking old
Teks with about 30
tubes, the thing will be so big that you'll find it hard to use unless
you get a cart to go with it. Then you'll spend more time trouble
shooting the scope than you will the circuits you want to use the
scope on.

I have a AN/USM338 which is a 50MHz dual trace HP scope.
I have seen many at swap meets and bought mine
for $50 a year or so ago. It is solid state except
for the CRT, and since it was built to mil specs, it works well.
Fair Radio Sales has them for $350, but you should be able to
find one for <$100 at a good sized ham fest. It is relatively small
and easily sits on a bench without taking up the whole bench.
It is also light enough to move around without a cart.

Another thing to think about is probes. I spent more on probes
for my scope than I did on the scope- you need probes that are
rated for at least the same BW as the scope (higher is better)
and they must have capacitance that matches the input range of
the scope (usually printed on the front of the scope at the input
ports). Tektronix has some good ap notes about selecting scope
probes - check their web pages.
Be prepared to spend $50-100 per probe (new units) for BW of
50 MHz or higher. The BW of the probe is in 10X mode- i.e.
when the probe is dividing the input voltage by 10. If you switch
a probe for 1X, the BW drops significantly.

Good hunting!
MR

Subject: BC-375 Transmitter Tuning Unit wanted (WW2 Surplus)

Tom:

I have a TU-8B and also may still have the VLF model -- think this one is a
TU-26B. Also have a couple of cases and front panels -- will have to check
which --B unit they are from.

My first rig was a 40-meter CW trans that was built in a TU-7B -- with a 6L6
driving an 807. It was a great little set and I wish I still had it.

I'll go to my storage unit this after to check what I have. Let me know your
needs. You are right on --XB . . . where X denoted the (approximate) frequency
of the unit. I can make you a package deal on everything I have -- since I may
be moving out of state in the near future and really don't want to pack and
haul these units again.

Subject: Drifty BC-221?

Brought home a 'new BC-221AE'. Nice and clean inside and all tubes check good. At first it didn't want to operate but a dose of contact cleaner on the front panel switches brought it back to life. It's been many years since I last use one but it seemed to me these are pretty stable units after a 30 minute warmup.

This unit however, exibits a slow drift even after hours of operation. It additionally warbles with an ever so slight jostling to the table upon which it sits. If this is NOT a common occurance, anyone have pointers to a cure?

From: "Bob"
Subject: Drifty BC-221?

Hi Jack,

Sounds like the cruds got into the variable capacitors as well.
Carefully shoot some Deoxit into the capacitor bearings and contact points
and also do the padder capacitors. An good shot of air in all the innards
will drive out any collected bug dung and other contaminents. Otherwise,
look for lose tubes and other parts. Let's face it, these old rascals are
55 years or more old and need a bit of TLC to keep them purring. You may
wan't to verfy that the 1 mhz crystal calibrator is stable--they can get a
bit wobbly after 50 plus years. The 221 should not move all that much after
a reasonable warm up, but keep in mind that they were a 0.01 percent of Fo
instrument in calibration accurace and that may be as good as it gets. They
will drift a bit (50 hz in 30 minutes perhaps). Clean-scrub-repalce old
carbon resistors-leaky tubes.

Subject: FS: Echophone Commercial EC-1B receiver

This would make a fine restoration project for someone with the time. The
radio is original and complete with no damage, mods -- or holes in the case of
chassis. It will need a new speaker, dial cords and re-capping in addition to
a good cleaning.
The side and front of the of case are OK but the top needs a good sanding and
repainting. I used an EC-1B on 40-meter CW as a Novice 45 years ago. Had
hoped to get this one back to near-original condition but the work schedule
just won't let me. Asking $35.00 plus shipping.

From: tubepwr813@aol.com (TubePwr813)
Subject: FS: For Sale List

Shack Spring Cleaning List 5/27/00

All items are as is. Items will be listed as working or not. Most items I
can supply digital photos of (or can take). Prefer payment to be US Postal,

Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $350 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $280 Set is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is 70lbs A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

From: Chris Suhar
Subject: Heathkit HX-10 "Maurader: question

I owned one for several years. It is an outstanding rig. Quite stable on ssb compared to the Apache with the adapter. The Maurader was a filter type ssb rig as opposed to the ssb adapter for the Apache which was phasing method. The potted power transformer was the weakness of the Maurader. Peter Dhal made a bunch of bucks selling replacement transformers. If you are fortunate to pick up a Maurader with one of his transformers in it, you will have on FB rig.

Subject: Help w/ drake tr-3

Check out this site and download the TR4CW pages. Operation of the TR3and 4's are very similar. You can get a TR3 manual from The Manual Man, etc. on the web. Just be sure to keep your key down time short during tune up to prevent over heating the final tubes. Get a watt meter and dummy load that will handle 300 watts. You will need a high impedance mic ie. Sure 444 or D104.

Adrian,

Welcome to the group. The Hammarlund HQ-150 offers a q-multiplier and a crystal filter. It is a bit older in style than the equally good HQ-145 and HQ-160 models. These are still fairly modestly priced though the readout is not too good in any of the aforementioned models. There are available a couple of outboard LCD digital displays available which will easily interface to most of the older receivers.

I hope you can find a bargain!

No. So far you're the only one to make that rather unsupportable
conclusion.

Did you read this thread? From the start? I doubt it. Let me copy in one
of my earlier comments:

>> >> I'm not quite sure if there is a correlation between gun control and
>> >> taking away our frequencies, aside from the general issue of
government
>> >> control.

I thnk Dan Fox's reply was tounge in cheek, so why don't you chill out
Lenny?

>
>If I had any doubt of my pro-gun control position

I'm anti-gun control and proud of it. If you don't like it, that's just
too bad. Deal with it. I don't back down from my positions just because
someone doesn't like it.

>
>Another hint: Scientific studies regarding the danger, if any, of exposure
>to RF, are not at all likely to have been designed to take away your
>frequencies, even if funded by the government....

[snip]

Lenny, chill out...take a deep breath and some valium...learn to recognize
humor when you see it. Me thinks YOUR the one so paranoid about us anti-gun
folks....If you don't want to own a gun that fine by me.

Subject: What a Bargain !

In article <8ghetkgup1@laurel.tc.umn.edu>, "George R. Gonzalez"
wrote:

> If he'd invested the $595 in 1955 in a 6% bond, it would be now worth
> $8,189.
>
>

In 1968 when I was 16 I had the opportunity to use, and the option to purchase a SX88 from a local older ham who had purchased it new in the mid 50s but had just "upgraded" to Drake equipment, I think an early 4 line. I used the receiver along with my old DX 100 for about a month and wished I could afford the $300 he was asking for it back then. It was way ahead of my SX110 in performance but $300 to spend on a ham radio receiver, even an SX88, back then was as far away from me as the $6,000+ it sold for on e-bay.

After I returned the SX88 to its owner,I used the SX110 for a few years and purchased a NC303 that IMHO was a better receiver on the ham bands than the SX88, and I only paid $125 for it.

The SX88 gained its reputation as the rock solid receiver that went on the first Clipperton DXpedition. The group that went to Clipperton sang its praises in many Hallicrafters ads during the mid 50s. I did not realize that there were so few of them made (anyone have a total?). If I had purchased the receiver in 68 I probably would have sold it at a hamfest in the early 70s for much less than I paid for it when I decided that I really needed something like the TS 520 or the Yaesu 101 more than a couple of boatanchor Heath and National units. Today I wish I had the 88 and the 303 and maybe the DX100 back.

That the SX88 went for as much as it did tells me that there is a lot of money out there chasing a dwindling number of collectable goods. This happened in the US rare coin market in the late 70s and the collector car market recently. Usually these things run in cycles and follow the fortunes of the economy.

BTW,

The SX88 went for $595 in 1955. According to the Consumer Price Index ((http://stats.bls.gov/cpihome.htm)this would be $3800 today and it It went for almost 100% more than that. As one writer pointed out it did not beat a 6% bond return, but was it possible to get a 6% bond in 1955?

I have for sale a very nice Collins S Line Station (WE) consisting of 75S1 Receiver with Waters Rejection unit and 4 Tubester Solid State tubes(these could be removed easily if desired as they simply plug in) and 500 Cycle Collins CW filter, 32S1 Transmitter, and 516F2 powersupply in the Speaker Cabinet. The front panels are original and in excellent condition, the chassis are very clean with all lettering intact, the cabinets and trim rings are good and straight and have been repainted. These units are used almost daily in my shack. I am moving about June 20 and will have a smaller space for my shack, so these must go. $1250.00 firm plus shipping and insurance or trade for ham gear (I could really use a mobile HF rig, KWM-2(A), or free standing tower). e-mail me at n5nbk@nortexinfo.net
Thanks, Dan N5NBK

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $425 each plus shipping.

I have one R-390A in decent shape for sale.
Front panel is in good shape. Minor scrapes have
been touched up. Knobs could use a repaint.
Mechanically and electrically ok.
Has bottom cover. No top cover.
Replacement meters.
Aligned and re-tubed about 2 years ago.
Copy of manual.
Works fine but offered as-is.

I have been keeping it as a spare for the one I have
in operation but decided I need the space more than a spare.

$275.00.
Pickup in Owosso MI.

I can email pictures to anyone interested in seeing it.

I used to work for Magnavox Ft Wayne during that time period.

What kind of Digital display window? Two or three rows in the center?

Where was the keypad located?

What are the the front panel switches labled?

I have used a Tektronix 7603 for years and just got a 2235 and really loike it....especially the size and low weight <grin>. 100 MHz will wwork for you in most instances..... the rule of thumb is to purchase bandwidth 3 to 5 times the highest freq signal you wish to display........

Source record: 65747

I got this radio yesterday,I was hoping someone out there possibly
had the info on the PD-5,and what mods were done to the radio itself
to install it.
It's working well after I fixed several bad solder joints,and cleaned
the switches.It does do some odd stuff,and I don't know what it's
SUPPOSED to do!The "selectivity" knob has little effect in SSB mode,but
with the "Q-Multiplyer" on,the knob seems to work on part of it's range,
but if turned clockwise,it squeals like hell.Is this normal,or does it
need a realign.
This is my first BA since I was a little kid,I had an old Hallicrafters
cheapie that died soon after I got it.
Thanks,
Barry

62. Need info on removing tape residue from front panel

Hi,

I need to remove some old tape adhesive from the front panel of my
"new HQ-100".There is some just under the S-Meter,and some other
under and on the blank panel for the clock that's not there.
The front panel is in nice shape,a little of the lettering is worn
above the volume and bandspread knob.Other than that,and the tape,it
looks great!
Thanks,
Barry

It was made by AMELCO Inc. Collins design with Collins mechanical filters.
filter bandwidths: 16 6 4 2 1 and .1 kc.

Really not interesed in a trade as I am trying to make space.

A private chat room with a ham, now that is exciting.
More exciting than talking to the finast woman in the world.

Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)
K1OIK Bacteria-the only culture most hams have

67. Info. on EV stand?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-03 00:00:00 UTC
From: N0ZEU <johne@tds.net>
Message-ID: <3938E66F.1B38CEC0@tds.net>
Source record: 65753

Looking for info on a stand for a Eletrovoice 644.

The stand looks like a low profile where the 644 mounts
right on to the stand with no "tube type" vertical adjustment.
I think it was made out of cast iron?

Is a model number known?

I am looking for this combination.

Thanks de John Nï¿½ZEU

68. RACAL FREQ COUNTER RA 6196a

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-03 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000603092057.05082.00001340@ng-fn1.aol.com>
Source record: 65754

The RA-6196a is really an antique. I have 2
This was used with early radios like the RA-17 and maybe the 6217(?).
It reads frequencies by using pre-nixie tubes that have a dot rotating in a circle (remember those?) and stopping at a patrticular digit. The indication is at the top of the unit. The indicator tubes are missing, but maybe could be gotten at a hamfest if you're lucky.
Rack mount maybe 2" high. No other info.
A real collector item.

$50 plus shipping

EMail please

69. RACAL RA-6397 Synthesizer F/S

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-03 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000603093829.05082.00001348@ng-fn1.aol.com>
Source record: 65755

I don't have much info but worked with the RA-6200 series of radios (RA 6217, 6225 etc) and maybe others to provide more accurate tuning than the analog dials. Rack mounted about
4" high, 19" wide. Still in factory box; appears unused. You set frequency through a set of 10-position switches (0-9). There is a chance that this unit has freq offsets already built in for these radios, so maybe not suitable as signal generators, BUT I DON'T KNOW AS I HAVE NO MANUAL. CAVEAT EMPTOR.
$120 + shipping
EMail only please

70. Racal VLF adapet RA 6337A

Source record: 65756

RA-6337A LF converter for the RA6217. It is factory new but
without the front panel and knobs. Still has QC tag! No manual either. My last
one went for over $200 on EBay; first $140 gets it (plus $10 Priority Mail in
US) here. If
not sold by next weekend will put it on EBay.

BTW that's the last of them (I had bought a half dozen at the Racal factory
a long while back). Find a blank rackpanel, cut a 1" sq hole for the tuning
dial,
and three holes for the knobs, and you're set.

I have several brand-new 250 Hz crystal filters for the 6778; also fits 6772E
and maybe others. 1.4 Mhz center freq. New. Case is rectangular with
solder-on mounting posts and smaller connector pins (solder these too). $60
ea shipped in US.

EMail only please

You could try lighter fluid which is naphtha. This is a relatively mild solvent that should work. I use it first, and then use car wax and buff out the panel. I did this on my Drake gear and it looks new. (It will not remove paint like stronger solvents will.)

:-)) 5 points. But...

"
A nerd is a technically bright but socially inept person. The classic image of the nerd has been the wild-haired genius kid with thick-lensed glasses surrounded by test tubes and computers. Microsoft's Bill Gates is sometimes considered the walking embodiment of the older, successful nerd. As computer technology becomes less frightening and "nerdish" to larger numbers of people, society seems to be developing a more tolerant, even benevolent view of the nerd.

Nerd is a more general term than geek (which always means computer geek) and weenie and is somewhat comparable to propellor head.

Although the term's origin is obscure, one theory is that it derives from a children's book by Dr. Suess, If I Ran the Zoo, in which this passage is found:

And then, just to show them,
I'll sail to Ka-Troo
And bring back an it-kutch,
A preep, and a proo,
A nerkle, a nerd,
And a seersucker, too!"
Dr. Suess's picture of the nerd looks much like the way computer nerds are portrayed today.

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and
also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $425 each plus shipping.

Subject: FS: R390A/URR Reduced

I have one R-390A in decent shape for sale.
Front panel is in good shape. Minor scrapes have
been touched up. Knobs could use a repaint.
Mechanically and electrically ok.
Has bottom cover. No top cover.
Replacement meters.
Aligned and re-tubed about 2 years ago.
Copy of manual.
Works fine but offered as-is.

I have been keeping it as a spare for the one I have
in operation but decided I need the space more than a spare.

$275.00.
Pickup in Owosso MI.

I can email pictures to anyone interested in seeing it.

>Ed VE5VX

Hi Ed;
I really cannot offer much but I had seen them brand NEW at Harrison Radio on
Long Island. I guess that was in the late 70's.
They are beautifully made in England.
I did own a set of KW Twins which look very similiar to the 2000. The Quality
was superb except that they use a giant circuit board with the tubes sockets
attached, but all aluminum frames es cabinet, very much like Collins.. I Know
they made both a "A" and a plain and have seen both being offered on Ebay a
while ago.
KW Electronics also made a high power transceiver called the KW "Atlanta" which
looked very much like a Swan 500CX, go figure?
Good Luck in your Quest.

OK. Why worry about it? You won't lose a single brain cell unless
you're going to chew on it or sand it.

It is not a hazard unless it is peeling or otherwise unstable.

I have used a Tektronix 7603 for years and just got a 2235 and really loike
it....especially the size and low weight . 100 MHz will wwork for you
in most instances..... the rule of thumb is to purchase bandwidth 3 to 5
times the highest freq signal you wish to display........

From: BDF
Subject: Need Info on Hq-100 with added on Product Detector PD-5

I got this radio yesterday,I was hoping someone out there possibly
had the info on the PD-5,and what mods were done to the radio itself
to install it.
It's working well after I fixed several bad solder joints,and cleaned
the switches.It does do some odd stuff,and I don't know what it's
SUPPOSED to do!The "selectivity" knob has little effect in SSB mode,but
with the "Q-Multiplyer" on,the knob seems to work on part of it's range,
but if turned clockwise,it squeals like hell.Is this normal,or does it
need a realign.
This is my first BA since I was a little kid,I had an old Hallicrafters
cheapie that died soon after I got it.
Thanks,
Barry

Subject: Need info on removing tape residue from front panel

Hi,

I need to remove some old tape adhesive from the front panel of my
"new HQ-100".There is some just under the S-Meter,and some other
under and on the blank panel for the clock that's not there.
The front panel is in nice shape,a little of the lettering is worn
above the volume and bandspread knob.Other than that,and the tape,it
looks great!
Thanks,
Barry

From: "Mike Srock"
Subject: FS: R-390A/URR RECEIVER

I have one R-390A in decent shape for sale.
Front panel is in good shape. Minor scrapes have
been touched up. Knobs could use a repaint.
Mechanically and electrically ok.
Has bottom cover. No top cover.
Replacement meters.
Aligned and re-tubed about 2 years ago.
Copy of manual.

This was Walt Bauer's personal R-390 for
those of you who knew him. I have been keeping
it as a spare for the one I have in operation but
decided I need the space more than a spare.

$325.00

Pick up only in Owosso MI or will meet up to
150 miles.

I can email pictures to anyone interested in seeing it.

Hi Adrian,
One of the better known (and used) general coverage receivers
of the valve era is the RCA AR88. I have the standard AR88
and also the AR88LF, which goes down to 74KHz.
There are lots of these sets around in the U.K., they are quite

often seen being sold at radio rallies. Expect to pay anything
between 40 to 70 quid for one. The only problem is the sheer
weight - 110lbs!, a true "boatanchor" in the real sense, very
solidly built, but I would recommend the AR88 anyday in preference
to some of the highly-priced over-rated modern rubbish.
Best wishes,
Duncan G4DFV.

From: n4buq@aol.com (N4BUQ)
Subject: Newbie with a question

Don't know about the availibility in the UK, but here in the US there is quite
a following for the Collins designed R390 and R390A. These were built for the
military by several contractors in the 50's, 60's (some even later than that).
They are quite a radio. At 26 tubes(valves) and 85 lbs., they are also in the
"heavy metal" boatanchor realm.

Good luck,

Barry - N4BUQ

From: "Brian Denley"
Subject: Newbie with a question

Adrian and Dave:
I will second that. I just got an excellent condition HQ-150 and it sounds
wonderful. The radio is sensitive and looks great. In fact, it dominates
the room. I have several digital receivers but this old set seems to pull
in just about anything the modern ones do. Last night I listened to
programs on Radio New Zealand from here just north of Boston MA. The damn
thing is built like a tank!

>I am looking for information about the KW ELECTRONICS KW 2000 B TRANSCEIVER.
>I have heard of this rig but know nothing about it and have never seen one.
>Any information appreciated.
>

Hi Ed,

I have a KW2000B which needs a bit of mending, it was my first rig and I love it. Nice and simple, elegant to look at.

The method of jointing components mentioned by another poster as "corkscrew" joints (I think that's how he described them), was known over here as the 'Jenkin's spring' technique.

I have a user manual which gives pretty comprehensive alignment and service info, which I will scan and e-mail to you if you like, but it will be a pretty big e-mail.

One word of warning about alignment. The coils are connected in series, so always begin with 160 metres.

Hi John,

Not sure if you are referring to the Electro Voice Model 664 or the Model 644. The 664 was the "Variable D" cardioid whereas the 644 was the long, slender one known as the "Sound Spot" and sometimes used on "shotgun microphones" on the Lloyd Thaxton Show back "in my day."
Anyway, it doesn't matter because BOTH used the same desk stand known as the Model #419. These are fairly rare although I lucked out at a flea market and bought one for $1.00.
Good luck.

ZUT,

Vern A. Weiss, W9STB

>
>Thanks.
>
>Ed VE5VX

Hi Ed;
I really cannot offer much but I had seen them brand NEW at Harrison Radio on Long Island. I guess that was in the late 70's.
They are beautifully made in England.
I did own a set of KW Twins which look very similiar to the 2000. The Quality was superb except that they use a giant circuit board with the tubes sockets attached, but all aluminum frames es cabinet, very much like Collins.. I Know they made both a "A" and a plain and have seen both being offered on Ebay a while ago.
KW Electronics also made a high power transceiver called the KW "Atlanta" which looked very much like a Swan 500CX, go figure?
Good Luck in your Quest.

I have a SP600VLF which has been thru a depot reconditioning.
No black beauties, and the front panel was repainted and relettered.
It is intermittant on one band. I suspect a cold solder joint or a cap
as sometimes it is ok and othertimes it is dead.
I will include a manual copy
$650.00 firm

Buddy, you don't know what species I screw, much less what gender, so
don't be telling me what diseases I may or may not have.

But I do know that whatever disease I may or may not contract in my
life, it won't be near as deadly and contagious and vile as the one you
are spreading right now.

Gotta name and an address? Or are you just another feckless flamer
hiding behind an adolescent user name and a mythical address?

I apologize for insulting all the churlish oafs out there.

Gray

Quite a sophisticated radio. In very good condition. Has one of the smoothest
tuning dials I've ever used. See it in Fred Osterman's book.
Will mount in 19" or can stay in its unique case. Open to offers before listing
on $Bay

Subject: Info. on EV stand?

Looking for info on a stand for a Eletrovoice 644.

The stand looks like a low profile where the 644 mounts
right on to the stand with no "tube type" vertical adjustment.
I think it was made out of cast iron?

Is a model number known?

I am looking for this combination.

Thanks de John N&#65533;ZEU

Subject: Info. on EV stand?

Hi John,

Not sure if you are referring to the Electro Voice Model 664 or the
Model 644. The 664 was the "Variable D" cardioid whereas the 644 was the
long, slender one known as the "Sound Spot" and sometimes used on "shotgun
microphones" on the Lloyd Thaxton Show back "in my day."
Anyway, it doesn't matter because BOTH used the same desk stand known
as the Model #419. These are fairly rare although I lucked out at a flea
market and bought one for $1.00.
Good luck.

ZUT,

Vern A. Weiss, W9STB

>Any information appreciated.
>

Hi Ed,

I have a KW2000B which needs a bit of mending, it was my first rig and I love it. Nice and simple, elegant to look at.

The method of jointing components mentioned by another poster as "corkscrew" joints (I think that's how he described them), was known over here as the 'Jenkin's spring' technique.

I have a user manual which gives pretty comprehensive alignment and service info, which I will scan and e-mail to you if you like, but it will be a pretty big e-mail.

One word of warning about alignment. The coils are connected in series, so always begin with 160 metres.

Subject: Need info on removing tape residue from front panel

You could try lighter fluid which is naphtha. This is a relatively mild solvent that should work. I use it first, and then use car wax and buff out the panel. I did this on my Drake gear and it looks new. (It will not remove paint like stronger solvents will.)

Subject: RACAL FREQ COUNTER RA 6196a

The RA-6196a is really an antique. I have 2
This was used with early radios like the RA-17 and maybe the 6217(?).
It reads frequencies by using pre-nixie tubes that have a dot rotating in a
circle (remember those?) and stopping at a patrticular digit. The indication is
at the top of the unit. The indicator tubes are missing, but maybe could be
gotten at a hamfest if you're lucky.
Rack mount maybe 2" high. No other info.
A real collector item.

$50 plus shipping

EMail please

From: radiomatt@aol.com (Radiomatt)
Subject: RACAL RA-6397 Synthesizer F/S

I don't have much info but worked with the RA-6200 series of radios (RA 6217,
6225 etc) and maybe others to provide more accurate tuning than the analog
dials. Rack mounted about
4" high, 19" wide. Still in factory box; appears unused. You set frequency
through a set of 10-position switches (0-9). There is a chance that this unit
has freq offsets already built in for these radios, so maybe not suitable as
signal generators, BUT I DON'T KNOW AS I HAVE NO MANUAL. CAVEAT EMPTOR.
$120 + shipping
EMail only please

Date: 04 Jun 2000 00:05:54 GMT
From: radiomatt@aol.com (Radiomatt)
Subject: RACAL RA-6397 Synthesizer F/S

Sorry...model number is MA 6317 and provides multiple outputs to work with RA 6217, 6218, 6225, 1217, 153, and 117, so that the frequency you dial in to the knobs is the actual received freq on the radio. There are six tuning knobs, and the smallest step is 100kHz. The output is 3.6 to 4.6 MHz.

From: radiomatt@aol.com (Radiomatt)
Subject: Racal VLF adapet RA 6337A

RA-6337A LF converter for the RA6217. It is factory new but
without the front panel and knobs. Still has QC tag! No manual either. My last one went for over $200 on EBay; first $140 gets it (plus $10 Priority Mail in US) here. If
not sold by next weekend will put it on EBay.

BTW that's the last of them (I had bought a half dozen at the Racal factory a long while back). Find a blank rackpanel, cut a 1" sq hole for the tuning dial,
and three holes for the knobs, and you're set.

I have several brand-new 250 Hz crystal filters for the 6778; also fits 6772E and maybe others. 1.4 Mhz center freq. New. Case is rectangular with solder-on mounting posts and smaller connector pins (solder these too). $60 ea shipped in US.

Subject: Shack Sale List

Shack Cleaning List 6/3/00

All items are as is. Items will be listed as working or not. Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set, as I never had it. I used the rig with a little hombrew power supply that I wish to keep. Selling Price for the above $350 Prefer pickup, but will ship. OFFERS??

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is a beast....hi A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165

Yaesu FRG-7 Shortwave Receiver....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

More to follow.....

This is my first experience with the RA17. With antenna connected to grid on rf tube, a signal goes through. Nothing from the antenna terminals. I want to check the coupling capacitor(if it's that) but how do I gain access without rebuilding the radio? it's built like a tank! much obliged - Bill
please email any advice to bill@tuberadiorepair.com thanks

150. Fixing up a Drake 2-B

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-04 00:00:00 UTC
From: n2cqr@erols.com
Message-ID: <393a725d.88427437@news.erols.com>
Source record: 65708

With the help of Avery, W3AVE, I was able to fix the dial/drive problem in my beloved Drake 2-B. The original owner had many years ago, successfully fixed the "too fast tuning" problem by putting a Jackson Brothers 6:1 reduction drive between the tuning knob and the little shaft mechanism that turns the string inside the 2-B. My reduction drive had apparently been damaged (probably during shipping) by some sort of lateral shock. This introduced all sorts of wobbliness and jumpiness in the tuning. Putting in the new drive fixed this right up. Tuning is now smooth as silk.

I'm not using the original Drake knob and skirt. I know this will be upsetting to BA purists, but I put a nice big knob from an old Hammarlund SP-600 on the Drake. I also used a little shaft extender so that this knob sits about an inch or so out from the front panel of the RX. This allows me to tune without bumping my hand on the side of the cabinet.

I noticed one other mod that the previous owner put in there: He ran a shielded cable from the input (grid) of the first audio amplifier to a plug on the back of the chassis. I'm thinking that he was using this to sample the audio (perhaps for input to a scope?). Any other thoughts on what this mod was for?

This morning I fired up the old Drake and its companion HT-37. On 20 meters using an inverted Vee, I called CQ and the first response was from Steve, VK6VZ near Perth. We had a very nice QSO.

73 Bill N2CQR

151. WTD: Schematic FTDX400 FRDX400

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-04 00:00:00 UTC
From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <393A007E.2D8C@nbnet.nb.ca>
Source record: 65709

Howdy all.....resurrecting and repairing this pair donated to our radio club and would primarily like to get ahold of a schematic for the transmitter (FTDX400). Would prefer if someone might scan one and send it to me or point me to a site which has one....current searches of FTDX400 or BAMA haven't turned up what I need. Failing that, a manual for scrounge or sale within the Maritime provinces of Canada would be welcomed. Lastly, if anyone out there could send me the pinout of the 11 pin keyed female chassis connector on the rear chassis apron of the FTDX400, that would be a help....at least as far as determining what the original wiring was supposed to be (a "bit" modified now heheh).

73....Keep on Tinkering.......THAT is REAL HAM RADIO

154. Panel Labeling Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-04 00:00:00 UTC
From: Jim Flanagan <jflan@ieee.org>
Message-ID: <MPG.13a426382e4796099896ea@netnews.worldnet.att.net>
Source record: 65712

Hello..
I am looking for advice on panel labeling. I have seen threads
regarding this topic where the use of decals, thermal labeling devices,
etc. have been used, but I want to learn an easy to do 'paint' technique.
I understand that silkscreening is what is commercially done, but are
there alternative ways that one could do this? As far as silkscreening,
what is the cost of having a stencil made, assuming that I provided the
artwork in negative/positve form? That seems to be where all of the cost
is tied up.. Thanks for all responses...

157. FA: Keypad for Collins KWM-380

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-04 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <8hdqn4$97e$1@nnrp1.deja.com>
Source record: 65715
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have a keypad for the Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=349728588

and the description is

This is a mint-condition keypad for the Collins KWM-380 HF transceiver.
When used with the interface board in your radio, enables direct
frequency entry from the keypad, storage of displayed frequency into one
of 10 memories, recall of frequencies stored in memory, and "stepping"
through the frequencies stored in memory. The stepping feature is
especially nice for contesting. This is a heavy metal brute, weighs
around two pounds and is mounted on a rubber slab so it stays put on
your operating table. Comes with documentation, cable and connector all
ready to plug into your '380 and go. This is in like-new condition,
owned by a non-smoker who rarely used it. I honestly don't think you
could tell it from new. The last time I saw a KWM-380 keypad advertised
retail it was close to $300, starting bid is about 1/6 of that; I don't
even know if they're still available anywhere else but right here on
good ol' eBay.

Closes 6/11/00.

Thank-you

171. need more valve info

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-04 00:00:00 UTC
From: LA8AK@online.no
Message-ID: <393abd80.82509241@news.online.no>
Source record: 65729

http://duncanamps.com/tubedata/tubesearch.html
is a valuable site for finding valve data. I tried several valve
types, but it seems that
only European valves have available extensive information
6BA6/EF93, 6BE6/EK90, 6AU6/EF94 have only the normal tables which
doesn't give
the additional info sought, while typical Philips have up to over a
douzen pages with graphs
and other design information as well as the tables

Found a very interesting graph for RV12P2000 (
http://duncanamps.com/tubedata/pdf/rv12p2000.pdf) -

it is on left side at the end of first page showing screen current vs
anode voltage for different settings of
grid voltage, I haven't seen this info for other valves, but would be
pleased if somebody could tell me if
it is available(?), it might only be found in Russian sources where
this seem to come from

the particular valves (pentode section) I need this data for is ECL82,
ECL84, ECL85, ECL86, EL84 -
particularly need info showing screen current as anode voltage
approaches zero

hope to hear from you

Hi All,
I have a National NC109 that is for sale. Made 1957-1960, 11 tubes, S meter, continuous coverage from .55-40 mhz. Bandspread on 80, 40, 20, 15 and 10 meters. I am selling it as a non-working set, it is missing 2 of the 455mhz I.F's. As I recall, other than that; it is working. I have a couple of pictures that I can send to interested buyers. I am asking $65.00 for the set. The buyer pays shipping. Please respond directly to: nc183d@aol.com
rgds,
Mark S.

Hi, gang,

I need two of the round 6-position coax switches with the SO-239s extending out the back. These for an antenna/shack switching panel I'm making. These switches will be the best configuration for the space I have available in the panel.

There must be two of these critters out there looking for a new home. E-mail me at the address below if you've got one. Thanks!!

73,

Doeas anyone have the specs on Andrew 3/8" heliax? I have 100's of feet of the stuff and connectors. If its better that RG-214, I'd like to use it on 6/2/432 at about 150 watts, vice RG-214. Thanks in advance.

Sorry...model number is MA 6317 and provides multiple outputs to work with RA 6217, 6218, 6225, 1217, 153, and 117, so that the frequency you dial in to the knobs is the actual received freq on the radio. There are six tuning knobs, and the smallest step is 100kHz. The output is 3.6 to 4.6 MHz.

Shack Cleaning List 6/3/00

All items are as is. Items will be listed as working or not. Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set, as I never had it. I used the rig with a little hombrew power supply that I wish to keep. Selling Price for the above $350 Prefer pickup, but will ship. OFFERS??

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is a beast....hi A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165

Yaesu FRG-7 Shortwave Receiver....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

More to follow.....

G'Day Bob,

The 1971 Summer Radio Amateur Callbook lists WA3QPY as follows:-

General Licence - George F Fuchs III, 4232 Joppa Road, Baltimore,
Maryland. 21236.

I checked out http://www.qrz.com but there is no current holder of this call
sign.
Knew that old call book would be useful one day, Hi.

I'm interested in the 30L1, but I'd fly to pick it up in person...Cash!
If you are within 80-1200 miles of central Michigan.

The only way I purchase these kinds of items on the net is to see them and
pay cash in person.

I do not in any way shape of form buy though e-bay.

Source record: 65631

Actually this is mis-labeled by manufacturer. It is a dummy load (50 ohm) with a little meter and a switch to route the output of the transmitter into either the dummy load resistor or directly to the antenna.

Nice blue case designed for wall mounting

ITT Mackay Marine
ARTIFICIAL ANTENNA
50 ohm 175 watt
601167-029-001

about 4' deep. 6" high, and 11" wide with screened ventilation holes at side-top and bottom. The connectors are at the bottom, and there are two brackets with screw holes for wall mounting. I do not have transmitter to test it with, but all appears OK (meter should be re-zeroed)(marked milliamps 0-1 but no indication of meaning of readings). The switch is mounted under the meter, and is marked ANTENNA and ARTIFICIAL ANTENNA

I originally bought it to use in reverse (route outdoor antenna to resistor, or switch to receiver when I'm using radios) to provide some lightning protection, but I got a switch that grounds antennas instead.

$140+ shipping. (Light...should weigh under 8 lbs packed)

EMail only please

Source record: 65633

Who said he was a Ham operator? And it took more than one to push it that high...hmmm

216. Help me identify this Yaesu crystal

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-05 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <EvN_4.38$x75.7402@bos-service2.ext.raytheon.com>
Source record: 65634
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.boatanchors

I found a crystal in my parts bin marked as follows:

Yaesu
FT-200
35.500

Obviously, it's a Yaesu FT-200 / Tempo One crystal
that runs at 35.500 MHz. What band does it cover
when installed in the set?

73,
Dean, K5DH

This gentleman and I are trading a few items, and anything that could go wrong has (tube damaged in shipment, etc.). But no beefs, no complaints on my part, because he has gone WAY beyond fair in making the trade a success. In fact, he's been just outstanding!

I highly recommend D.S. Platt, he's a really good guy!

From: "Ron"
Subject: CC-AWA Summer Swap meet CANCELED

I'm VERY sorry to inform everyone that the second annual
CC-AWA Summer Swap Meet in Raleigh NC has been
CANCELED.

This is due in part to a scheduling conflict with the
NC State Fairgrounds and my trying to plan a meet in a city located
more than 3 hours away from where I live. It really makes it hard
to try to put everything together when it's that far away.

Hence forth, ALL CC-AWA swap meets will be required to
have a local person to handle the planning.
Our other 3 swap meets, Greensboro NC, Columbia SC and
Spencer NC all have local members doing the planning.
I will take care of sending out notices to the AWA and ARC
and posting them on the NG's and our web page.

We now have an opening for a swap meet in the summer of
2001. If anyone would be interested in hosting this event
please let me know. If possible I would like to have a firm
date and location by the first of September.

73,

Ron

From: Chris
Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and
also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $425 each plus shipping.

Subject: FS: Complete AM station and More

Complete AM Station For sale: Hammarlund HQ-170A-VHF Receiver, Multi-Elmac AF-67 Transmitter (160 to 10 meters), Rare PS2V Elmac Power supply, even rarer Factory cabling between PS and AF-67. All manuals, all work. On the air now. Good condition.
Just supply the antenna, mic, key, and antenna relay. Prefer to sell as a set $350.00.

Hallicrafters SR-150 Transceiver with PS150-120 Power supply. Power supply works, SR-150 needs some work but lights up, receives, and puts out power. With Original Manual. $200.

Rare Yaesu SP-980P Speaker patch excellent with original Manual and cables. $80.

Can deliver to the Atlanta Hamfest June 2 or 3 or will make arrangements to deliver or ship.

From: "George M. Winford"
Subject: Globe Scout 65

We are in the process of moving, and I ran across my first transmitter, a Globe Scout 65 bought from WRL in 1953. It hasn't been used since I joined the Navy in 1959, but it looks pretty good.

Are their manuals/parts available for it? Or, should I just throw it on the junk heap with other stuff?

Curious,

geo., K5AIE

From: "D. S. Platt"
Subject: Globe Scout 65

Why don't you put it on the air. Books are readily available from dealers on the net (e.g. W7FG Manuals). Parts? No problem, really..especially tubes. The old rigs are worth money again and AM is popular! If its nice and you get rid of it, you may never find another similar one. Besides, its your old rig!!!

From: "Vern Weiff"
Subject: Heath V7A VTVM High Voltage Probe Question

Does anyone have the specifics on what size resistor was used in the Heath V7A VTVM high voltage probe? I found a probe at a flea market with a 1090

Megohm resistor inside and am wondering if it will work.

Also, with a Heath HV probe, what is the factor used to read DC voltage on a V7A VTVM?

Thanks.

Subject: Heath V7A VTVM High Voltage Probe Question

Vern,

My Heathkit model # IMA 100-11 probe has a 1090 Megohm resistor inside it. It also has a label saying "X100 for 11 Meg ohm inputs".

hope this helps,

Bill
KC0LE

Subject: Heath V7A VTVM High Voltage Probe Question

Vern,

I just looked inside my Heathkit model IMA 100-11 HV probe, and it has a 1090 Meg resistor in it. The label says that it is X100 for 11 Meg input VTVMs. So, a 1000 volt source should read 10 volts on your VTVM - provided that it is has an input of 11 Megohms.

hope this helps,

Bill
KC0LE

Subject: lead in boatanchor paint?

Does anyone know whether the paint used on the metal front panels and
cabinets of boatanchors typically contains lead? If it does, is there
much of a hazard when either sanding the old paint off or using paint
remover solvent?

Date: Tue, 30 May 2000 14:42:10 -0500
From: "George R. Gonzalez"
Subject: lead in boatanchor paint?

Better safe than sorry. Go to your local hardware store and get a "lead
testing kit".
For about $3 you get some pieces of sensitive paper that you can test the
equipment with.
Better than losing a lot of brain cells... or ending up with stunted
children.

(ok, you all can start with the rebuttals now....)

PLEASE do! Those of us who are a bit to young to have lived through it can
get a sense of what it might have been like when we can see and touch some
of the real stuff. Who knows where that radio was in 1944?

That tangible, palpable sense of history that makes a difference in people's
lives comes from their ability to feel like they were there, and these
radios are bits of history that are vivid reminders.

Thanks to the posters who preceded me on this thread.

charset="iso-8859-1"

Thanks to Chris Cooper for the info on the B40 BFO valve, which is a =
CV303, equivalent to a EF22. My apology to the readers for my earlier =
sarcastic comment about a nil response. I'd forgotten that last weekend =
was a holiday weekend. Most people in their right mind would have been =
out enjoying the good weather, instead of being glued to a computer.

Regarding the P104 receiver, I do know that it requires a separate power =
supply, which connects via a cable terminated in a 6-pin Jones plug. =
This appears to be identical to the Jones plug as fitted to the Air =
Ministry R1155 receiver. There is a good chance that the Museum of =
Communication will have the correct power supply.

I'll keep you posted on developments at the visitors' centre for the =
Tall Ship at Glasgow Harbour. As well as a workshop facility, part of =
which will be a display, we hope to have a mock-up of a ship's radio =
cabin, dating from WWII. The Marconi CR100 will be used for this. To =
encourage a "hands on" experience for the visitors, it is intended that =
two listening booths will be provided, one probably with the =
aforementioned B40, and the other, with the P104, provided I can get it =
working.

Bye for now, and 73 from John GM0KTO

In keeping up with what is a fine positive notification for the forum, I would like to mention a recent dealing with Jon Bachrach who goes by Jon as a message poster. I recently expressed a desire for a piece of radio gear that he had for sale. Before I could get a check to him, a local ham offered him more than his offering price...cash. Being a good guy, he stuck to his original offer and sold the piece to me. Sometimes we may think intergity is lost but with cases such as this, maybe there is more hope than we think. Thanks for the bandwidth, John

Take this ridiculous Chat to private E-mail and not a cross several groups. I think you are all Ignorant Idiots that act like little children and should learn if your going to flame someone for there lifestyle them use E-MAIL not public posting. The rest of use that read these groups do not want to see it at all. If you don't like the original poster for trying to make money on hats with your call sign on them so people know who you are during a hamfest then don't buy it and keep your mouth shut about it. I am for one proud of my call and it makes it easier to display it so people know who I am when they see me at a show or a hamfest. NOW GROW UP AND SHUT UP!!

Well, which is it? Hard line, Heliax(TM) and Superflex(TM) are all
different.
at 400 MHz, RG214 is 4.1dB/100', 3/8 Superflex is 2.4dB/100', and Heliax is
2.2dB/100' . Hard line, depends which it is. All this is in catalog 37, or
at www.andrew.com

From: WB3KUM/9 <d.breeden@NOSPAMwcom.com>
Message-ID: <393BEA3F.1335815D@NOSPAMwcom.com>
Source record: 65648
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amareur.equipment

I have a KnightKit T175 10/6 meter linear. It had several problems when I got it even though it was sold working. Still has wrong finals but works with one outstanding problem. It will not trip the relay in SSB, AM/FM fine, CW kicks in and out too quickly. All the parts in the sense circuit and the 12AT7 seem to be fine, tube test good. Relay kicks in with about +7 volts bias to 12AT7, kicks out at about 2 volts. 12AT7 seems to drop 80V from the relay to gnd. I tried rebias and I can get it to kick in, but it will not kick out then.

Any ideas other than external switching of the relay. I have installed this as a tempory measure, but would like a perment fix. Contesting time here and I need more than 6W on 6M!

Thanks

Dennis WB3KUM/9

<<In keeping up with what is a fine positive notification for the forum, I would like to mention a recent dealing with Jon Bachrach who goes by Jon as a message poster. I recently expressed a desire for a piece of radio gear that he had for sale. Before I could get a check to him, a local ham offered him more than his offering price...cash. Being a good guy, he stuck to his original offer and sold the piece to me. Sometimes we may think intergity is lost but with cases such as this, maybe there is more hope than we think. Thanks for the bandwidth, John>>

Yes, I've also had very positive dealings with John, 73, Joe

Replace the electrolitic capacitor that is used to hold the voltage up
in the sense circuit. It has probably become defective with age. You
might also want to ohm out all the resistors involved. Old carbon
types will change with age also.

Judgeing by some of the post's in this thread, several of these
"IDIOTS" need HATS.. To cover the hole in their head where their
Feeble Brain was sucked out.

My opinion of course.!!

241. Tektronix selling price survey updated

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-05 00:00:00 UTC
From: "Phil T. (VA3UX)" <phil@vaxxine.com>
Message-ID: <393C26F2.1BBC64A0@vaxxine.com>
Source record: 65659

My selling price survey of Tek stuff on eBay has been updated. The
survey
now includes 963 different instruments (scopes, probes, plug-ins etc),
and
there are over 9600 prices data entries gathered during the past 10
months.
Some HP, GR and Wavetek stuff too.

My site is located at :

http://www.vaxxine.com/phil/default.htm

Still haven't got any pics in the "scope" section yet but there are few
in the
Vintage Radio section (this takes WAY more time than I thought it
would).
Comments/suggestions on the format greatly appreciated.

Phil Turcotte (VA3UX)

242. FS; Icom IC-71 6 meter AM/FM transceiver

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.boatanchors

Hello Dean,
The 35.500 Crystal is for the 21.000 to 21.500 MHz band. it is designated X202 in the heterodyne crystal oscillator (TR201 2SC372) It should have been fitted as a standard item.
According to the Instruction Manual for the Tempo One (FT200), 28.5 to 29.0 MHz is crystalled as a standard band. And optional crystals can be installed for 28.0 to 28.5, 29.0 to 29.5, 29.5 to 30.0, for which HC16U crystals with wire leads are recommended and should be soldered into marked positions on the Heterodyne Oscillator circuit board. The appropriate Trimmers should be adjusted for each added crystal.
Hope this helps, 73 de Denzil G3KXF.

Hello. I just picked one of these up at Dayton, and haven't had a chance to make a power cord for it just yet to see if it works. I have a couple of questions in the meantime:

1. How well does this rig work? I've never known anyone using one and was curious.

2. Anyone reduce to power to QRP level? If so, any tips on how to do this?

3. Any other comments would be welcome.

Thanks and 73s

Bob KT8DX

From: ovrreactor@aol.com-nospam (OvrReactor)
Subject: FS / FT: Assorted capacitors

I have WAY too much stuff in the garage, So I've decided to thin out my capacitors so I can have some shelf space. I'll also consider trading the capacitors listed below for NOS compactron sockets, if you have any. I'm also looking for 20EZ7's, 4HA7's, and 5HA7's. Anyway, here's what I have;

(100) - 33 uF 16 V radial electrolytic - Panasonic
$4 ALL

(20) - 22 uF 250 V radial electrolytic - Illinois Capacitor
$8 ALL

(165) - 5 uF 10 V axial electrolytic
$5 ALL

(100) - 25 uF 20 V axial electrolytic - Mallory
$8 ALL

(100) - 10 pF NPO ceramic disc
$4 ALL

(200) - 39 pF 200 V monolithic ceramic CK05 radial - Mallory
$8 ALL

Pictures of the capacitors can be seen at;
http://members.aol.com/ecc81/yardsale/capacitors.html

Interested? Please respond by email to < OvrReactor@aol.com >.

Also, I have a bunch of items (52, actually), listed on eBay (...sorry), with a starting bid of $1.00, no reserve. Check out;

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=over-reactor

The list of items up for auction is below. Thanks for helping me make space for NEW junk,

Regards,
Tom Mitchell

Subject: FS: Hallicrafters S20R

Hi All,
I have a Hallicrafters S20R for sale. It is all original, knobs, bottom plate,
everything. I don't want to chopitup for parts as it is quite restorable. The
only thing that I can see that is missing are the 2 strips on the sides. I
believe that it is functional, but the buyer should put it on a variac to make

sure that it doesnt fry. I have 2 photos that I can send to interested buyers.
I am asking $80.00 for this vintage set. Email me directly for the photos at:
nc183d@aol.com and see for yourself...The buyer pays shipping for this item.
rgds,
Mark S.

Subject: FS: Manual copies for TV-7D(*) Tube Tester

I will be making a copy of my 1960 original TM11-6625-274-12 for a
friend. This is the Operators and Organizational Maintenance manual
for the TV-7(*) series tube testers. It will be a high quality copy
including the schematic and switch chart which is not found in the
Operators manual. It is from the Depot Maintenance manual but I
thought it would be good to include it.

I am willing to make more copies while I am at the copy center as I am
there anyways with the manual so if you need a copy please e-mail me.
Cost will be $12.00 mailed in the USA. I will mail overseas but the
postage costs will be higher depending on where it will be mailed to.

Cordially,

Michael Crestohl

From: "J.Parry"
Subject: KW Vanguard/FL2000 linear.

Hi,

I'm having a shack claret and have a Vanguard and an FL2000 for
disposal.

The Vanguard is a cw/am rig made by KW Electronics here
in the UK and I

had intended to use it in conjunction with an old receiver for
setting up an

AM station. The rig is quite big and heavy (a proper boatanchor!)
and I would

imagine runs 100 watts.

The Vanguard and the FL2000 (I have the original packing for
the linear)

are both in good condition and I will either sell (I don't
know what they

are worth so am open to offers...) or exchange for anything
interesting.

I'm interested in receivers generally.

Cheers and best 73's, de

John GW3VVC

260. Collins 30L-1 diode boards available

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-06 00:00:00 UTC
From: Rod Murray <rmurray@mitre.org>
Message-ID: <393D22CD.2A78683C@mitre.org>
Source record: 65548
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.homebrew

Hi folks,

I have reproduced the original diode boards for the Collins 30L-1 amplifier. The boards are high quality copies of the original. All component locations as well as electrical traces are just as they are in the original. I did increase the diode through hole size so the boards can be populated with either 1 amp (i.e. 1N40007) or 3 amp (i.e. 1N5408) type diodes. There are two versions available. One version has a soldermask (dresses up the board a bit), and silkscreen with component reference designators and outlines. The other is just like the original and has neither. Photos of populated, unpopulated, soldermask/silkscreen, bare board and an installed board can be seen at: http://members.aol.com/dw130/diode1.jpg
http://members.aol.com/dw130/diode2.jpg
http://members.aol.com/dw130/diode3.jpg
http://members.aol.com/dw130/diode4.jpg
http://members.aol.com/dw130/diode5.jpg

What I am making available is unpopulated boards in either version. I will include a parts list and source for components or you can use your own choice in components.

I am giving these boards out at my cost to produce of $15.00 each. I am doing this as a service to 30L-1 owners not to make any money from it. (Of course I am not terribly interested in losing money on it either!)

If you would like one or more of these boards, they are available on a first come / first served basis.

Please e-mail me first to confirm availability. Then send $15.00 for each board + $3.55 shipping in the US (no matter how many boards), $6 shipping overseas for one board + $1 for each additional board to:

Rod Murray (k1rod)
17 Shelly Drive
Derry, NH 03038

From: "Rob M." <rmcrae1@nycap.rr.com>
Message-ID: <trb%4.2616$mD1.44844@typhoon.nyroc.rr.com>
Source record: 65553

Hello,

Sorry for the OT post but does anyone know if the 1L5 plug in will work in my 551 scope? If so, do all 1** series plug ins work in the 551? Any help is appreciated!

Thanks,
Rob

266. Elmac AF67 value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-06 00:00:00 UTC
From: Kline Wilson <tennis@olypen.com>
Message-ID: <zRb%4.135727$701.1710871@news4.giganews.com>
Source record: 65554

Hi,

What is an Elmac AF-67 worth? I am not trying to sell it here. I have a buyer, just want some idea of what it is worth.

It worked fine in 1961 when I last used it so tubes should be OK. I would pass it on with a James vibrator power supply, cables, and all manuals.

Thanks and 73s Kline w7cnn@arrl.net

My my, aren't we sensitive. I don't like hats either-with or without call signs-but if someone wants to "where" one, I can't see getting this excited about it. I'm new to amateur radio, but if I meet any more hams as obnoxious as this guy I'll find some other hobby. Time to crawl back under your rotted log, BigUnit, people are laughing at you and you've gotten very tiresome.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

I have an exceptional Drake 7-line (TR7,PS7,MS7,RV7,matching desk mic, fan, NB, reprint book set, incl. maint.) and a pretty nice R-274/SX-73. I'm looking for the following: Hallicrafters HT-20, ART-13 w/ p.s. or other 100-400w MIL AM transmitter. Might consider an outstanding GRC-19 (or T195 and rack/cables).

Sure wish I had what you need. I had an R274 once and have regretted letting
it go for a long time. But the closest I come is an HT-18 -- FM/CW, not AM;
QRP, not QRO...NOT what you need.

Good luck

Cortland

Hi Rob:

The 1L5 will work in the 551. Also, the 1** series (called the "letter series") will work in the 551. Two vertical amplifiers are needed for the dual beam scope.

The 1L5 is not considered very good as it has numerous images. If you need a spectrum analyzer, buy something else. Most of the other letter series work fine.

The 551 is a unique scope and difficult to get many parts for. I hope you have the power supply for it and it works ok.

This scope is truly a proper piece for the boatanchors net.

73, Colin K7FM

I have an OLD Collins filter catalog which lists them, but there are several versions of each. There are none ending in 000, however if they end in 00 then they should be 2.7kHz at 3dB long type Y. The catalog I found them in uses kc instead of kHz so you can guess how old it is!

Long type Y are 7/16" dia. and 2 1/2" long not including three solder tabs on each end.

If they don't end in 00 then there are various bandwidths and case styles but I only have data for 011, 021, 031 and 041.

Hope this helps.

287. ***Newbee question re HRO receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-06 00:00:00 UTC
From: wagil@aol.com
Message-ID: <20000605224534.18577.00001643@ng-ca1.aol.com>
Source record: 65677

I'm new to this group and know little to nothing but want to learn more.

Could anyone out there tell me when the first HRO receiver was made. Some fellow told me that Pres Hoovers son designed it. Is that true?

2. Has anyone seen/found a NEAR device. It looks like a wall wart with no outlets. It was designed in 60s as part of a Civil Defense aleart system. It plugs into your a/c outlet and when the pulic utilities sent a superimposed freg down line it caused this thing to alarm.

Any help/clues/info appreciated

Pls email me as I may not be able to find my way back to site.

294. Summertime Shack clean up.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-06 00:00:00 UTC
From: cnord@snet.net
Message-ID: <393c8688.6672484@news.snet.net>
Source record: 65684

Summertime Shack clean up.

Hallicrafters SX-25. Recapped, resistors replaced as needed,
cleaned up and aligned. I would rate this as a 8 or 9
cosmetically with very clean paint, sharp lettering and few
scratches. There is a minor paint chip at the bottom of the ANL
switch.
Electrically it is fine except the highest band (15 to 42
MHZ) does not work. I have not tried to fix this as my interest
was in 160 and 80 meters. Nice looking and nice sounding radio with PP
6V6
output.
Includes original manual. $180 shipped UPS in the US. Looks much
nicer then it's picture at http://pages.cthome.net/nord/sx_25.html

Ecophone Commercial EC-1 Very nice cosmetic condition. Works but has
not
been restored. $75 shipped UPS in the US.

Sargent 10A. This is a rare early 30's short-wave regenerative
rcvr. Uses a mechanical linkage to rotate the tuning cap body
about 2 degrees for bandspread. Completely restored and
functional. Cosmetically a 9 but does not have all the original
knobs. $225 shipped in US.
http://pages.cthome.net/nord/sargent10a.htm

Drake R4B w/ MS-4 Speaker. Works and includes 160 mtr and 29 mhz
xtals. Has wearing of paint around the tuning and AF knob.
Otherwise looks fine. Speaker is very nice. $170 shipped.

Globe Scout 65. Fair cosmetic condition, some scratches on front.
Unknown
electrical condition. $65 shipped.

Bob,
The Yeasu FT-7 is a (SSB + CW) 20 watt 10 thru 80 meter tranceiver. I've always had a high regard for them because of their performance. It would make a great mobile radio.

I don't know of any power mod but you may be able to find something on the net.

298. FS:Collins Filter Adapter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-06 00:00:00 UTC
From: gary sarra <gary.sarra@snet.net>
Message-ID: <393CFFAD.9BC8D37D@snet.net>
Source record: 65688
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Hi,
If you own a Collins R-388 or a 51J-3 this mechanical filter adapter will enable you to enjoy the benefits of their mechanical filters that were included in the 51J-4. The adapter plugs into the first IF tube socket and this tube plugs into the adapter. You are then able to choose 1 filter to plug into the adapter. This unit works great. Included besides the adapter are 3 Collins mechanical filters, 1.4Kc, 3.1Kc, and 6.0Kc. Asking $400 shipped in the 48 for the set. I would like to keep it as a set, but if no interest I may sell the items seperately.
Thanks, Gary. gary.sarra@snet.net

Not true, but he made some suggestions that influenced the design.

There is a 1934 QST article by James Millen describing the design of the first HRO. See the ARRL QST compact disk for 1934.

FS: Hammarlund HQ-150 general coverage and ham band receiver. This is a great receiver to listen to. It has a nice front panel, appears unmodified, and has some wear on the cabinet (not bad). It has variable selectivity as well as s-meter on the front panel. Part of an estate, includes manual. If I don't sell it here by tomorrow evening I am taking it to Ham-Com 2000 this weekend. Works, $225. Mike, (409) 693-1461.

318. Circuit board goo?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-07 00:00:00 UTC
From: "(blank)" <w4pa@yahoo.com>
Message-ID: <5xt%4.4277$Zl6.29794@news1.atl>
Source record: 65497

Been working on a tube rig and while replacing some .01�s and the filter caps I�ve noticed that the brownish-red circuit board material used on the boards and the terminal strips melts at the touch of a soldering iron just a little quicker than I would like (or expected). This begs two questions: 1) any suggestion for getting this gooey melted crud off of the copper circuit board traces? 2) some of this goo ends up mixing with the melted solder while the solder joints look good, I've got to wonder if they're cold. Any thoughts?
Scott

319. Power Transistors for FT101EE

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-07 00:00:00 UTC
From: Art <art2@pipeline.com>
Message-ID: <8hlp9kths1@slb7.atl.mindspring.net>
Source record: 65498

I have an FT101EE and need to replace the two power transistors in the low voltage power supply section. The transistors are labeled T20A6 and this coincides with the schematic. However, I have not been able to find this transistors in any of the semiconductor suppliers. Could someone please advise what the normal replacement for this transistor is?? Any help would be greatly appreciated.

Best regards,

Art WB4VVO

Colin,

Many thanks for your reply! A couple of questions though. Are the letter series units starting with 1 the only ones that fit? My 551 manual only covers the single letter types (type CA excepted). I have seen some starting with 3** and 5**.

And yes this scope definitely fits in the boat anchor category! I have the supply and it still works well. I got it from a defunct stereo shop 10 years ago w/cart etc..

I didn't get the manuals though. 10 years later, I bought a set on ebay and after talking to the seller they turned out to be the very ones that came with my scope!

Thanks,
Rob

Of course I'm not, and I didn't claim to be. I do, however, have
at least a passing grasp of the use of punctuation, capitalization,
correct spelling, complete sentences, and coherent thoughts within
those sentences!

By the way, your post to me is full of its own spelling and grammar
errors. May I assume that you don't live in a glass house?

Just wate until your over 60 and you 60 WPM typin goes down hill...What was fat fingering becomes a way of life...then you fingers dicide that "a" belongs in nearly all words, that "d" and "k" have traded places....That's about the time you need to hire a proof reader as the ones built into the word processors do not catch many of the gramatical errors mixed in with the spelling errors and you start tending toward runon sentences with random punctuation,

For those who don't need spell checkers and syntax checkers and have never mispelled a word in their lives, just wait until you suddely can't remember the word you were trying to spell. And...all of this happens *before* you get old. <:-))

Then with strong bifocals you can tell there is something on the screen, but often have to take them off to read it, or put them on to read it, or just throw them in a corner.

Gettin' old is Hell, but it sure beats the alternative!

A LOT more work, a hold lot less expensive.

Unless the transformer is completely gone, open it up and replace this one wire. Other than rewinding it (done it a couple of times), or having it done (I have no idea who would do this), Peter Dahl is the only source I know of.

Source record: 65519

I am trying to figure out the various models. I have a few questions for the group:

1. Heathkit SB-230 - What type of final tubes/availability and input power. I think this one uses a rare tube.

2. Heathkit SB-1000 - What type of final tubes/availability and input power

3. Heatkit SB-220 - Did these use (2) 3-500Z?

4. Was the SB-201 like the SB-200, but without 10meters?

5. Dentron - did all of these use TV sweep tubes?

6. Yeasu FL-1000 - Did these use (4) 572B's?

Thanks for the collective knowledge and 73,
Eric

Subject: 'Good' Ground?

Newbie question

Being in a 3rd floor apartment (with no garden access) how can I get a good
ground connection? Bearing in mind that the copper plumbing in the building
(like all electrical installations in the UK) is bonded to the electrical
ground at the consumer/meter unit.
Wouldn't there be a danger of either electrical interference or positive
potential from these copper pipes?

Hmmmm....advice welcomed

Thanks

Adrian

Subject: 'Good' Ground?

The ground pin on a valid 3 wire outlet is about as good as you can get as far
as RF is concerned. All that wiring acts as a counterpoise. Plug a tester in
the outlet to verify that the third wire is actully wired to the outlet.
brokebob@aol.com (broke=not working, retired=not working, retired=broke)

From: Cortland Richmond
Subject: 'Good' Ground?

For a good RF sink, use as large a ground plane as you can create in your
apartment. Even if it is not a quarter wavelength across or more, it will still
act as a capacitive object to free space, and present a relatively low impedance
(you can calculate its capacitance and thus, its impedance) to RF. Putting
metal foil or sheet under the carpeting on the radio shack floor and running it
up the wall to the ceiling is not out of line.

This does not, of course, replace an earth type safety ground. That is what the
ground on your mains sockets is providing.

Cheers,

Cortland

From: Smith-Gaspard
Subject: 'Good' Ground?

Greetings Adrian ...

I'm not sure if you are worried about a good equipment grounding connection (EGC) or a good R-F ground at a desired set frequency.

If you are concerned about a good EGC, do not trust the "bonding" wire in your electrical receptacle until you ... yourself ... or a qualified electrician tests the
bonding to earth ground. Your electrical codes are a little different in the U.K. as
compared to our National Electrical Code (NEC) we use here in the states. We are now using the 1999 edition which all new construction is committed.

You may create/improve your electrical EGC by installing a good bond (buss) using a number 10 AWG Cu (copper) connection to all of the chassis ground terminals on your equipment. Once all equipment is bonded to each other now comes the best part. You will need to run at least a number 6 AWG Cu or a number 4 AWG Al (aluminum) conductor from your third floor to the earth leaving at least eight (8) feet extra at the grade. Purchase two (2) ground rods
that are at least eight (8) feet in length and 5/8" dia. Install one ground rod as
close to your EGC from the third floor to grade and install the other ground rod

six (6) feet from the other ground rod. When you purchase the earth ground rods, purchase two (2) Cu grounding clamps ... one for each bond on the rods. Connect the electrical grounding conductor to the first earth ground rod using the grounding clamps and run the remainder of the electrical grounding conductor to the second grounding rod at the clamp.

This meets our 1999 edition of the NEC here in the States. One word of caution ... before running the long EGC from the outside of the third floor to grade ... please check the geometry first so as not to come into contact with any live (hot) existing conductors.

This installation will assure a good bond to earth, preclude ground loops,
and eliminate any "hot" R-F on your communication(s) equipment when
transmitting.

Good luck ... be safe ... let me know if you install the grounding system.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician

3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

John,

why post a query about British equipment in a foreign ng - and then complain
of a nil response? If you ask in a British group - such as uk.r.a for a
start - and then move on to an email list like the uk vintage radio list -
you are more likely to find what you are looking for.

And, sorry, I can't help with either the B40 or P104 - but there are plenty
of people in the UK familiar with both.

Subject: CHEAP! FA: Hallicrafters SX-28A Super Skyrider 1940's Receiver

I have a really nice Hallicrafters SX-28A Super Skyrider HF-SW/VHF
Receiver for auction. This is in great condition and is from 1941-1944
vintage. This covers 550 kHz - 43 MHz; AM, SSB and CW modes.
It has a built-in AC Power Supply. I even have the ORIGINAL manual
for this puppy!

This was the finest, Top-Of-The-Line, HF Receiver from Hallicrafters
in the 1940's era. It's going cheap, and there is NO reserve!

"J.Parry" wrote:

Hi,

I'm having a shack claret and have a Vanguard and an FL2000 for
disposal.

The Vanguard is a cw/am rig made by KW Electronics here
in the UK and I

had intended to use it in conjunction with an old receiver for
setting up an

AM station. The rig is quite big and heavy (a proper boatanchor!)
and I would

imagine runs 100 watts.

The Vanguard and the FL2000 (I have the original packing for
the linear)

are both in good condition and I will either sell (I don't
know what they

are worth so am open to offers...) or exchange for anything
interesting.

I'm interested in receivers generally.

Cheers and best 73's, de

John GW3VVC

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: List of the rec.radio newsgroups

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

From: "Howard L Ritter, Jr"
Subject: Magnovox mystery rig-help!

Not a boatanchor, exactly. Appears to be a government-contract prototype "transmitter-receiver" by Magnavox Ft Wayne. No model number or description silk-screened on the front panel, but has a gov't nomenclature plate with blanks between parentheses in the designator, plus a part number and a contract number with an "88" that looks like it might represent the year.

Rack-mounted and about 2 ft deep, digital display window, keypad controlled, modular componentry, bristling with cooling fins, built like an R-390 in terms of robustness, must weigh close to 100 lbs. Beautiful piece of equipment and very competent-looking.

Anyone have any ideas or information? Post or email directly.

TIA,

--hlritter

Subject: Need Advice on O-Scope

> I am planning on buying an Oscilloscope this weekend at the Rochester
> Hamfest. I would like to find one that is of adequate quality to work on
> Boat Anchors and possible newer equipment. Could anyone give me some
> pointers here on what to look for ?

Bandwidth is important, and is not usually printed on the face
of the scope anywhere.
BW should be about 5x-10x the BW of the signal you want to
look at. Think about it- if you try to look at a 10 MHz square
wave signal with a 10 MHz BW scope what will you see?
You'll see something approaching a sine wave! By having
5x-10x BW, the waveform will look more like a square wave
because the harmonics are within the BW of the scope.

For audio, a cheapy (one that has 5 way binding posts for input)
may be adequate.

Size is also important. If you get one of those great, hulking old
Teks with about 30
tubes, the thing will be so big that you'll find it hard to use unless
you get a cart to go with it. Then you'll spend more time trouble
shooting the scope than you will the circuits you want to use the
scope on.

I have a AN/USM338 which is a 50MHz dual trace HP scope.
I have seen many at swap meets and bought mine
for $50 a year or so ago. It is solid state except
for the CRT, and since it was built to mil specs, it works well.
Fair Radio Sales has them for $350, but you should be able to
find one for <$100 at a good sized ham fest. It is relatively small
and easily sits on a bench without taking up the whole bench.
It is also light enough to move around without a cart.

Another thing to think about is probes. I spent more on probes
for my scope than I did on the scope- you need probes that are
rated for at least the same BW as the scope (higher is better)
and they must have capacitance that matches the input range of
the scope (usually printed on the front of the scope at the input
ports). Tektronix has some good ap notes about selecting scope
probes - check their web pages.
Be prepared to spend $50-100 per probe (new units) for BW of
50 MHz or higher. The BW of the probe is in 10X mode- i.e.
when the probe is dividing the input voltage by 10. If you switch
a probe for 1X, the BW drops significantly.

Good hunting!
MR

I stand corrected- It could be anything related to the BigScum. From the apparent age of XXX, as indicated by the high tone of the repartee, I had assumed it was younger (by a little). THe vocabulary has not developed much, so I assumed about 6-8 years old, if that.

I'm back, completely frustrated. I will freely admit I got ripped off. The IDIOT that had this before me, in addition to completely hosing up the B+ supply, worked very hard to replace the 6JE6s with 6KM6. He had to unsolder and swap the plate caps!! Works OK on 10 meters, doesn't work on 6 meters at all. I get more power out in bypass. So much for this weekends VHF contest.

Opinions, do I

spend $70-$100 on correct tubes.
use it as a basic chassis for some other tube(s), i.e. 6146, 807, 829B, 2E24, 2E26, ?
are there any good simple plans for a 6 meter linear using one of these newer power modules?

Sorry, $300+ for a TE or other is currently out of my price range I really don't need that much power. 50 to 100W is fine.

Many thanks to all in advance.

Dennis WB3KUM/9

A2426 is a vidicon tube, tube pin-out pattern 8HM, fil. 6.3 volts @ 0.090 amps.

I wish I could scan the base pattern for you, but I haven't a scanner...
Source book is Electron Tube Locator, by George Fathauer.
The A2426 is the same tube as an 8541.

Hope that helps some..

This is not correct. A2426 is nice beam-power valve, at least if it is
made by GEC. It has an octal base. I don't know of any other A2426
valve.
I can't find CV 4082 in any of my list. Are you sure it is the correct
number?

I am looking for a mike connector for my Cillins 32V2 transmitter. The rigs connector is listed as connector; 2 female contacts; wall mount part number 365 1004 00.
What I need is the mike connector. It will have 2 male pins with a round jacket with threads on the inside of the jacket that will thread to the wall mounted female receiver of the trandmitter. It is possible that other boat ankors would have used this same connector. I have not found a connector listed in any of my reference books but they are limited. Any held would be appreciated

Of all the tubes mentioned the 6146 is the only thing worth
considering. If the amp used "sweep tubes" then you will have to
reduce the plate voltage to around 800 under load.

Considering how "hosed up" the thing is and it works somewhat on ten I
would look at the input and the output circuitry. Sounds to me like it
was butchered to work on 11 meters, and thats all.

378. HELP!Heathkit Apache

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-07 00:00:00 UTC
From: cen45169 <jimw8vxh@centurytel.net>
Message-ID: <393E43AA.175C876F@centurytel.net>
Source record: 65585

I recently purchased a Heathkit Apache Transmitter in excellent condition and am interested in putting it into service, however I have developed a major problem.
After thouroughly checking it out, and applying power in 30 volt increments over time increments of an hour, everything was looking good until the last 30 volt increment which brought the applied voltage up to 120 volts. after about a minute at the normal applied voltage, I heard a loud arching noise and the two 7 amp inline fuses blew. This arc was caused by the fact that when this unit was assembled one of the high voltage leads from the power transformers was pinched between the transformer flange and the chassis.
This caused the high voltage transformer to become shorted and consequently permanently destroyed with an internal short.
I am in need for a transformer to restore this Transmitter.
Heathkit part number is 54-65 with the following voltages.
Primary 115 volts 60 cycles
Secondary voltages as follows.
5VAC @ 4AMPS
5VAC @ 2AMPS
6.3VAC @ 3.3 AMPS
6.3VAC @ 9 AMPS
800VAC CT @ 175 MA
240VAC CT @ 20 MA
Any help in locating a transformer to replace the defective one would be very much appreciated.

Anybody that may be able give me a lead in locating a transformer for this transmitter
please e-mail me at the following address.

jimw8vxh@centurytel.net

Thank you
Jim

You might want to try Antique Electronic Supply at
"http://www.tubesandmore.com/". They have new and used
7027As. The used ones go for $23.30 but there is no price
on the new ones.

Okay, folks, what happened to spelling and grammar? How many
times have you seen an ad like this on a newsgroup recently?

"for sell amatuer ham raido equiptment not suer what it does
im not a ham not in to bad of shape dont no if it works came
from an old mans estate been seting on a shelfs in garage for
years their are 8 items whant to sale all for one money make
me a offer im not to suer what their worth so dont rip me of
thanks and 73's.bubba"

Presumably, these ads are being posted by adults, and it's
probably fair to assume that they at least graduated from
high school. I was always under the impression that one
had to know how to read and write to graduate. Apparently,
I was wrong.

I have my Nomex firesuit on (I'm sure the "flames" will be
flying my way soon).

7027A tubes seem to be over-priced these days. An alternative would
be to replace them with 6550s. There are 2 web sites that deal with
Ranger mods and I am seriously considering modifying my RII. The mods
are a good alternative to 7027As. Improved audio and better RF
performance due to power supply improvements.

Check W3AM's web site for more info.

Hi,
I have for sale a National NC-303 receiver. The RX covers 160-10 meters. The dial is also calibrated to cover 6,2,11/4 meters with converters (not included). Has XCU-300 xtal. calib. and copy of the owner/maint. manual. Front panel is a 9 out of 10 and the cabinet is an 8 out of 10 only because of a couple small nicks. No rust, dents, corrosion. Operates excellent on all bands and is well calibrated. This is a nice radio. $275 I will split shipping or if you pick it up I will negotiate the price a little. Radio is located in CT. 06248. Thanks Gary

I can see the bad spelling and grammer as being forgiveable in only two instances. One being that the person is a foreigner and has not yet learned sufficient English. Two being that the person is from south of the Mason Dixon line and is the innocent victim of the extensive inbreeding in that area. In this area it is also common for residents to refer to "my senior year" and actually be talking about the 5th grade.

May I respectfully suggest that it's time for all of us to simply ignore this blowhard, and I use that term knowingly, as not being worth the bandwidth?

This poster is a classic example of a certain psychopathology that works like this:

What is different is not comprehended by the provincial.
What is not comprehended is inconceivable to the impoverished of imagination.
What is inconceivable is feared by the fearful.
What is feared is hated by the insecure.
What is hated becomes both the vehicle and, paradoxically, also the very object, of opprobrium on the part of those who are insecure with their own identities and subconsciously fearful that they, in fact, are much more LIKE those they fear and hate than their conscious minds can tolerate realizing.

In this case, homosexuals become both the object of vilification and the preferred paradigm of insult, despite the fact that any poster's sexual orientation is utterly irrelevant to the discussion, unknowable to BigUnit, and finally not even perceived as insulting by the objects of his tirades, who understand the source. Yet deviant (in his mind) sexual orientation is the mode to which this psychopathological individual gravitates inevitably. His monomaniacality is stunning. He can't get out of this rut! It has entrapped him! And there is a good reason for that.

Even his chosen screen moniker fairly shouts ambivalence and insecurity: "Look, everyone! I've got a Big One!" A more pathetic plea for respect could hardly be imagined, or a more heart-rending attempt, whistling in the dark, to convince himself of his own worth and identity. And he also, significantly and undoubtedly subconsciously, in choosing to identify himself AS his penis, picks the central organ of the homosexual lifestyle! Coincidence? I don't THINK sooo....

Additionally, I would not discount for a moment the possibility that BigUnit is actually female, and very, very butch. Many of her figures of speech, as well as her in-your-face (deliberate choice of metaphor), intolerant aggressiveness, echo the stridency of Feminazis and of activist fairies like the Queer As Hell and ActUP! crowds.

I think these facts speak eloquently for themselves. BigUnit, keep telling yourself that you're straight....

Last word, everyone. OK?

Yes, Arnold, it is the correct number. You are correct in saying
that the A2426 is a beam tetrode with an octal base (and an anode cap).
It is made my GEC.
Do you have data on the A2426?
Best wishes,
Duncan.

You got that right! Curiously, English lacks a unique verb tense for something that is done continuously. We have past, present, and future tense but must use the present tense when we really want a continuous tense. Some Black accents have corrected that by prefacing the verb with "be" as in "I hear her dad is after him" "Yup, he be running". Naturally, the more conservative deem this a flaw and miss much humor thereby.

May I respectfully suggest that it's time for all of us to simply ignore this
blowhard, and I use that term knowingly, as not being worth the bandwidth?

This poster is a classic example of a certain psychopathology that works like
this:

What is different is not comprehended by the provincial.
What is not comprehended is inconceivable to the impoverished of
imagination.
What is inconceivable is feared by the fearful.
What is feared is hated by the insecure.
What is hated becomes both the vehicle and, paradoxically, also the very
object, of opprobrium on the part of those who are insecure with their own
identities and subconsciously fearful that they, in fact, are much more LIKE
those they fear and hate than their conscious minds can tolerate realizing.

In this case, homosexuals become both the object of vilification and the
preferred paradigm of insult, despite the fact that any poster's sexual
orientation is utterly irrelevant to the discussion, unknowable to BigUnit, and
finally not even perceived as insulting by the objects of his tirades, who
understand the source. Yet deviant (in his mind) sexual orientation is the mode
to which this psychopathological individual gravitates inevitably. His
monomaniacality is stunning. He can't get out of this rut! It has entrapped
him! And there is a good reason for that.

Even his chosen screen moniker fairly shouts ambivalence and insecurity: "Look,
everyone! I've got a Big One!" A more pathetic plea for respect could hardly be
imagined, or a more heart-rending attempt, whistling in the dark, to convince
himself of his own worth and identity. And he also, significantly and
undoubtedly subconsciously, in choosing to identify himself AS his penis, picks

the central organ of the homosexual lifestyle! Coincidence? I don't THINK sooo....

Additionally, I would not discount for a moment the possibility that BigUnit is actually female, and very, very butch. Many of her figures of speech, as well as her in-your-face (deliberate choice of metaphor), intolerant aggressiveness, echo the stridency of Feminazis and of activist fairies like the Queer As Hell and ActUP! crowds.

I think these facts speak eloquently for themselves. BigUnit, keep telling yourself that you're straight....

Last word, everyone. OK?

A2426 is a vidicon tube, tube pin-out pattern 8HM, fil. 6.3 volts @ 0.090 amps.

I wish I could scan the base pattern for you, but I haven't a scanner...
Source book is Electron Tube Locator, by George Fathauer.
The A2426 is the same tube as an 8541.

Hope that helps some..

This is not correct. A2426 is nice beam-power valve, at least if it is
made by GEC. It has an octal base. I don't know of any other A2426
valve.
I can't find CV 4082 in any of my list. Are you sure it is the correct
number?

Yes, Arnold, it is the correct number. You are correct in saying
that the A2426 is a beam tetrode with an octal base (and an anode cap).
It is made my GEC.
Do you have data on the A2426?
Best wishes,
Duncan.

Subject: FS:NC-303

Hi,
I have for sale a National NC-303 receiver. The RX covers 160-10 meters.
The dial is also calibrated to cover 6,2,11/4 meters with converters
(not included). Has XCU-300 xtal. calib. and copy of the owner/maint.
manual. Front panel is a 9 out of 10 and the cabinet is an 8 out of 10
only because of a couple small nicks. No rust, dents, corrosion.
Operates excellent on all bands and is well calibrated. This is a nice
radio. $275 I will split shipping or if you pick it up I will negotiate
the price a little. Radio is located in CT. 06248. Thanks Gary

Subject: HELP!Heathkit Apache

The voltages used look pretty standard for HF transmitters. See if the
transformer used in Heathkit's HP-23 power supply will fit and work for you.

Subject: HELP!Heathkit Apache

A LOT more work, a hold lot less expensive.

Unless the transformer is completely gone, open it up and replace this one wire. Other than rewinding it (done it a couple of times), or having it done (I have no idea who would do this), Peter Dahl is the only source I know of.

Date: Wed, 07 Jun 2000 08:44:26 -0400
From: cen45169
Subject: HELP!Heathkit Apache

I recently purchased a Heathkit Apache Transmitter in excellent condition and am interested in putting it into service, however I have developed a major problem.
After thouroughly checking it out, and applying power in 30 volt increments over time increments of an hour, everything was looking good until the last 30 volt increment which brought the applied voltage up to 120 volts. after about a minute at the normal applied voltage, I heard a loud arching noise and the two 7 amp inline fuses blew. This arc was caused by the fact that when this unit was assembled one of the high voltage leads from the power transformers was pinched between the transformer flange and the chassis.
This caused the high voltage transformer to become shorted and consequently permanently destroyed with an internal short.
I am in need for a transformer to restore this Transmitter.
Heathkit part number is 54-65 with the following voltages.
Primary 115 volts 60 cycles
Secondary voltages as follows.
5VAC @ 4AMPS
5VAC @ 2AMPS
6.3VAC @ 3.3 AMPS
6.3VAC @ 9 AMPS
800VAC CT @ 175 MA
240VAC CT @ 20 MA
Any help in locating a transformer to replace the defective one would be very much appreciated.

Anybody that may be able give me a lead in locating a transformer for this transmitter
please e-mail me at the following address.

jimw8vxh@centurytel.net

Subject: Need 7027 Modulation tubes

7027A tubes seem to be over-priced these days. An alternative would
be to replace them with 6550s. There are 2 web sites that deal with
Ranger mods and I am seriously considering modifying my RII. The mods
are a good alternative to 7027As. Improved audio and better RF
performance due to power supply improvements.

Check W3AM's web site for more info.

You might want to try Antique Electronic Supply at
"http://www.tubesandmore.com/". They have new and used
7027As. The used ones go for $23.30 but there is no price
on the new ones.

From: WB3KUM/9
Subject: Problems with KightKit T-175 Linear (again)

I'm back, completely frustrated. I will freely admit I got ripped off.
The IDIOT that had this before me, in addition to completely hosing up
the B+ supply, worked very hard to replace the 6JE6s with 6KM6. He had
to unsolder and swap the plate caps!! Works OK on 10 meters, doesn't
work on 6 meters at all. I get more power out in bypass. So much for
this weekends VHF contest.

Opinions, do I

spend $70-$100 on correct tubes.
use it as a basic chassis for some other tube(s), i.e. 6146, 807, 829B,
2E24, 2E26, ?
are there any good simple plans for a 6 meter linear using one of these
newer power modules?

Sorry, $300+ for a TE or other is currently out of my price range I
really don't need that much power. 50 to 100W is fine.

Many thanks to all in advance.

Dennis WB3KUM/9

Of all the tubes mentioned the 6146 is the only thing worth
considering. If the amp used "sweep tubes" then you will have to
reduce the plate voltage to around 800 under load.

Considering how "hosed up" the thing is and it works somewhat on ten I
would look at the input and the output circuitry. Sounds to me like it
was butchered to work on 11 meters, and thats all.

Been working on a tube rig and while replacing some .01s and the filter caps I've noticed that the brownish-red circuit board material used on the boards and the terminal strips melts at the touch of a soldering iron just a little quicker than I would like (or expected). This begs two questions: 1) any suggestion for getting this gooey melted crud off of the copper circuit board traces? 2) some of this goo ends up mixing with the melted solder while the solder joints look good, I've got to wonder if they're cold. Any thoughts?
Scott

Your absoluteley wright.

Just kidding.

What the world needs is a spell-checker kill file that screens out any post with more than one misspelling. The net would be a much nicer (and quieter) place.

From: "Roger Halstead"
Subject: Spelling and grammar (or a lack thereof)

Just wate until your over 60 and you 60 WPM typin goes down hill...What was fat fingering becomes a way of life...then you fingers dicide that "a" belongs in nearly all words, that "d" and "k" have traded places....That's about the time you need to hire a proof reader as the ones built into the

word processors do not catch many of the gramatical errors mixed in with the spelling errors and you start tending toward runon sentences with random punctuation,

For those who don't need spell checkers and syntax checkers and have never mispelled a word in their lives, just wait until you suddely can't remember the word you were trying to spell. And...all of this happens *before* you get old. <:-))

Then with strong bifocals you can tell there is something on the screen, but often have to take them off to read it, or put them on to read it, or just throw them in a corner.

Gettin' old is Hell, but it sure beats the alternative!

Of course I'm not, and I didn't claim to be. I do, however, have
at least a passing grasp of the use of punctuation, capitalization,
correct spelling, complete sentences, and coherent thoughts within
those sentences!

By the way, your post to me is full of its own spelling and grammar
errors. May I assume that you don't live in a glass house?

Okay, folks, what happened to spelling and grammar? How many
times have you seen an ad like this on a newsgroup recently?

"for sell amatuer ham raido equiptment not suer what it does
im not a ham not in to bad of shape dont no if it works came
from an old mans estate been seting on a shelfs in garage for
years their are 8 items whant to sale all for one money make
me a offer im not to suer what their worth so dont rip me of
thanks and 73's.bubba"

Presumably, these ads are being posted by adults, and it's
probably fair to assume that they at least graduated from
high school. I was always under the impression that one
had to know how to read and write to graduate. Apparently,
I was wrong.

I have my Nomex firesuit on (I'm sure the "flames" will be
flying my way soon).

Subject: Spelling and grammar (or a lack thereof)

I can see the bad spelling and grammer as being forgiveable in only two instances. One being that the person is a foreigner and has not yet learned sufficient English. Two being that the person is from south of the Mason Dixon line and is the innocent victim of the extensive inbreeding in that area. In this area it is also common for residents to refer to "my senior year" and actually be talking about the 5th grade.

Subject: Tektronix plug in question

Colin,

Many thanks for your reply! A couple of questions though. Are the letter
series units starting with 1 the only ones that fit? My 551 manual only
covers the single letter types (type CA excepted). I have seen some
starting with 3** and 5**.

And yes this scope definitely fits in the boat anchor category! I have the
supply and it still works well. I got it from a defunct stereo shop 10
years ago w/cart etc..

I didn't get the manuals though. 10 years later, I bought a set on ebay and after talking to the seller they turned out to be the very ones that came with my scope!

Thanks,
Rob

Just for info...I still have a power transformer
in good shape from a Tek 535, if someone is
interested.

Dean,

You are so right.
This is just one more example of the computer-generation "dumbing down." Unfortunately the use of lower case letters for proper nouns is beginning to creep into areas where the authors should know better...corporate advertising and the media.
Just like the FCC/ARRL Ham License Give-Away Bonanza, expect to continue seeing lowered standards for those who lack initiative.
No wonder Johnny can't write....or add....or think anymore. Bill Bennett is correct, no one is outraged anymore about anything and performance standards are under attack by not only schools, FCC and media but also, sadly, the people.

From: Chris
Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and
also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $425 each plus shipping.

Subject: FS: R390A/URR Reduced

I have one R-390A in decent shape for sale.
Front panel is in good shape. Minor scrapes have
been touched up. Knobs could use a repaint.
Mechanically and electrically ok.
Has bottom cover. No top cover.
Replacement meters.
Aligned and re-tubed about 2 years ago.
Copy of manual.
Works fine but offered as-is.

I have been keeping it as a spare for the one I have
in operation but decided I need the space more than a spare.

$275.00.
Pickup in Owosso MI.

I can email pictures to anyone interested in seeing it.

Hi Ed;
I really cannot offer much but I had seen them brand NEW at Harrison Radio on
Long Island. I guess that was in the late 70's.
They are beautifully made in England.
I did own a set of KW Twins which look very similiar to the 2000. The Quality
was superb except that they use a giant circuit board with the tubes sockets
attached, but all aluminum frames es cabinet, very much like Collins.. I Know
they made both a "A" and a plain and have seen both being offered on Ebay a
while ago.
KW Electronics also made a high power transceiver called the KW "Atlanta" which

looked very much like a Swan 500CX, go figure?
Good Luck in your Quest.

OK. Why worry about it? You won't lose a single brain cell unless
you're going to chew on it or sand it.

It is not a hazard unless it is peeling or otherwise unstable.

I have used a Tektronix 7603 for years and just got a 2235 and really loike
it....especially the size and low weight . 100 MHz will wwork for you
in most instances..... the rule of thumb is to purchase bandwidth 3 to 5

times the highest freq signal you wish to display.....

Subject: Need Info on Hq-100 with added on Product Detector PD-5

I got this radio yesterday,I was hoping someone out there possibly
had the info on the PD-5,and what mods were done to the radio itself
to install it.
It's working well after I fixed several bad solder joints,and cleaned
the switches.It does do some odd stuff,and I don't know what it's
SUPPOSED to do!The "selectivity" knob has little effect in SSB mode,but
with the "Q-Multiplyer" on,the knob seems to work on part of it's range,
but if turned clockwise,it squeals like hell.Is this normal,or does it
need a realign.
This is my first BA since I was a little kid,I had an old Hallicrafters
cheapie that died soon after I got it.
Thanks,
Barry

Subject: Need info on removing tape residue from front panel

Hi,

I need to remove some old tape adhesive from the front panel of my
"new HQ-100".There is some just under the S-Meter,and some other
under and on the blank panel for the clock that's not there.
The front panel is in nice shape,a little of the lettering is worn
above the volume and bandspread knob.Other than that,and the tape,it
looks great!
Thanks,
Barry

I found it in Fathauer's book. It must be a misprinting. He doesn't
list CV 4082 in the CV... list in the end of the book, and I have not
found this number in any of the other books I have either.
If there is a valve labeled CV 4082 it is strange. Can anyone else
help us here?

Data on A2426: Vf 6.3V/1.3A Va 150V Vg2 150V Ia 50mA -Vg1 13.5V
Ig2 5.0mA S 8.0mA/V Wa 15W
Brans VadeMecum list this valve as a pulse tetrode with a Vpeak of 8KV

No, not Amphenol. A company called Wire Products or WPI took
over this item. This is the 80 Series Microphone connector.
It is on page 403 of my Newark catalog #115.

good luck,
Phil

need to agree here (note intentional lack of upper case letters).

As I understand it, Vern feels that we're all stupid because we didn't do CW at 16wpm. I'm a new "Advanced", and proud of it. Move on Vern. Things change; as does language. I'm personally thrilled when I can understand the point posters (from all over the world) are trying to make. Vern buddy, work on your compositional skills. Spelling is not all there is to writing. While you're at it, try to develop a sense of humor.

Stanford Doctor O' Fine Arts.

HI everyone .This is my first post to any group so please forgive me of any mistakes.
I am the very lucky new owner of an HRO s/n D52
I cant pay what it is worth but the person selling it didn't know its value so I got it.
my question is.....
1)what is it looking for in a speaker/field coil values?
2) none of the knobs have any labels-what is the layout of the knobs? rf gain- audio gain-bfo ,I do know which is the crystal filter and the tune knobs Hi Hi . please any help on bringing it back to life will be received with open arms. Thanks,Lynn AA1OH

Yeahhhh!!!!
100 years ago the people of the United States were generaly uneducated and no one cared. The only reason you care now, You can't expect us, the younger generation, to suppliment your social security if we don't know enough to get good employment. Too bad grand-dad I don't care to support ya anyway!
Carl

Hello Ron,
did you have any luck finding a schematic,if not I have a photo copy
here,its about 3 pages,.For a very small fee,mainly to cover postage
and copy cost,I could mail you a copy.
Also,I will be putting an MS-15 up for auction on E-bay that does not
work.It had a trace until someone tried to rejuvinate the crt.I
beleive
the filament is now open in the crt.It would make a great parts unit
I'm sure.I don't have the battery pack or any accessories for it.Just
the scope and cabinet.It will be fairly cheap.If you would be
interested,let me know and I'll E-mail you when it's posted.
Thanks,
Alan

441. Help with FT101EE

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-09 00:00:00 UTC
From: Art <art2@pipeline.com>
Message-ID: <8hqp1v$56p$1@nntp9.atl.mindspring.net>
Source record: 65309

I have an FT101EE and need to replace the two power transistors in the low voltage power supply section. The transistors are labeled T20A6 and this coincides with the schematic. However, I have not been able to find this transistors in any of the semiconductor suppliers. Could someone please advise what the normal replacement for this transistor is?? Any help would be greatly appreciated.

Best regards,

Art WB4VVO

Pardon? Never heard of the present progressive tense, as in "he is
running"? Sorry, Biker, back to school for you.

443. FS/FT: Atlas 210X HF mobile rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-09 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <na605.78$x75.10791@bos-service2.ext.raytheon.com>
Source record: 65311
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For sale or trade:

Atlas 210X solid-state HF mobile rig. Very compact size (only weighs 7 pounds). Covers 80/40/20/15/10 meters, SSB and CW. Analog dial. This is a late 1970s rig that is 100% solid-state and runs on 13.8 VDC at up to 20 Amps. May need some work. Transmitter works fine on all bands; power output is 100W plus on 80m through 20m, about 80W on 15m, and about 50W on 10m, and I'm told this is correct for a 210X. Receiver sensitivity doesn't appear to be what it should on 80m and on 20m thru 10m, but 40m is strong. Rig is clean, with minor usage wear on the front panel and the cabinet, but not serious at all. It's a good looking set. Original hand mic (Shure Bros. 404) is included and is in great shape. A Cerlox-bound reprint manual, enlarged to 8.5" x 11", is included. This is a complete manual that includes operating instructions, service information, info on Atlas accessories, also contains some ads, spec sheets, and so on. I bought the rig with the intention of using it mobile, but I got a great deal on a used Alinco DX-70, so this one went on a shelf. Now, it's gotta go. I have $170 invested in it, and I'd like to get that back out of it if possible. In trade, I'd be interested in trading toward a Drake T-4XC transmitter with AC-4 p/s (of course, I'll make up the difference in cash). Interested?

In the RSGB Publication "Service Valve and Semiconductor Equivalents"
Published in 1967 the A2426 manufactured by the M-O Valve Company is listed
as the equivalent of the CV4082. Only other information is that it is a
tetrode.

The Radio, Television, Industrial Tube, Diode and Transistor Equivalents
manual by BIB. Babani first published in 1960 lists the VX3518 as the CV4082
equivalent.

452. Need 7094 tube info

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-09 00:00:00 UTC
From: staylor@lucent.COM
Message-ID: <453B16902112D211AAC400805F9FE7D3043B4AA8@NJ0117EXCH003U>
Source record: 65320

Does anyone have the original (a copy of the) RCA data sheet on the 7094 with tube curves etc.? This is more info than one would find in the TT-5 RCA Transmitting Tube Manual.

Seth KC2WE

From: "Lynn Shackelford" <aa1oh@tiac.net>
Subject: 1935? HRO

HI everyone .This is my first post to any group so please forgive me of any mistakes.
I am the very lucky new owner of an HRO s/n D52
I cant pay what it is worth but the person selling it didn't know its value so I got it.
my question is.....
1)what is it looking for in a speaker/field coil values?
2) none of the knobs have any labels-what is the layout of the knobs? rf gain- audio gain-bfo ,I do know which is the crystal filter and the tune knobs Hi Hi . please any help on bringing it back to life will be received with open arms. Thanks,Lynn AA1OH

>Electron Tube Locator, by George Fathauer.

I found it in Fathauer's book. It must be a misprinting. He doesn't
list CV 4082 in the CV... list in the end of the book, and I have not
found this number in any of the other books I have either.
If there is a valve labeled CV 4082 it is strange. Can anyone else
help us here?

Data on A2426: Vf 6.3V/1.3A Va 150V Vg2 150V Ia 50mA -Vg1 13.5V
Ig2 5.0mA S 8.0mA/V Wa 15W
Brans VadeMecum list this valve as a pulse tetrode with a Vpeak of 8KV

Best regards,

You got that right! Curiously, English lacks a unique verb tense for
something that is done continuously. We have past, present, and future
tense but must use the present tense when we really want a continuous
tense. Some Black accents have corrected that by prefacing the verb with
"be" as in "I hear her dad is after him" "Yup, he be running".
Naturally, the more conservative deem this a flaw and miss much humor
thereby.

Dean,

You are so right.
This is just one more example of the computer-generation "dumbing
down." Unfortunately the use of lower case letters for proper nouns is
beginning to creep into areas where the authors should know
better...corporate advertising and the media.
Just like the FCC/ARRL Ham License Give-Away Bonanza, expect to
continue seeing lowered standards for those who lack initiative.
No wonder Johnny can't write....or add....or think anymore. Bill
Bennett is correct, no one is outraged anymore about anything and
performance standards are under attack by not only schools, FCC and media
but also, sadly, the people.

need to agree here (note intentional lack of upper case letters).

As I understand it, Vern feels that we're all stupid because we didn't do CW at 16wpm. I'm a new "Advanced", and proud of it. Move on Vern. Things change; as does language. I'm personally thrilled when I can understand the point posters (from all over the world) are trying to make. Vern buddy, work on your compositional skills. Spelling is not all there is to writing. While you're at it, try to develop a sense of humor.

I've bought several of those connectors in recent years from Newark
Electronics. They're in the catalog, and you just have to find them. Sorry I
can't remember the model number--but I think they may still be made by
Amphenol.

No, not Amphenol. A company called Wire Products or WPI took
over this item. This is the 80 Series Microphone connector.
It is on page 403 of my Newark catalog #115.

good luck,
Phil

Subject: Info. on EV stand?

Looking for info on a stand for a Eletrovoice 644.

The stand looks like a low profile where the 644 mounts
right on to the stand with no "tube type" vertical adjustment.
I think it was made out of cast iron?

Is a model number known?

I am looking for this combination.

Thanks de John N&#65533;ZEU

Subject: Info. on EV stand?

Hi John,

Not sure if you are referring to the Electro Voice Model 664 or the
Model 644. The 664 was the "Variable D" cardioid whereas the 644 was the
long, slender one known as the "Sound Spot" and sometimes used on "shotgun
microphones" on the Lloyd Thaxton Show back "in my day."
Anyway, it doesn't matter because BOTH used the same desk stand known
as the Model #419. These are fairly rare although I lucked out at a flea
market and bought one for $1.00.
Good luck.

ZUT,

>

Hi Ed,

I have a KW2000B which needs a bit of mending, it was my first rig and I love it. Nice and simple, elegant to look at.

The method of jointing components mentioned by another poster as "corkscrew" joints (I think that's how he described them), was known over here as the 'Jenkin's spring' technique.

I have a user manual which gives pretty comprehensive alignment and service info, which I will scan and e-mail to you if you like, but it will be a pretty big e-mail.

One word of warning about alignment. The coils are connected in series, so always begin with 160 metres.

Subject: Need info on removing tape residue from front panel

You could try lighter fluid which is naphtha. This is a relatively mild solvent that should work. I use it first, and then use car wax and buff out the panel. I did this on my Drake gear and it looks new. (It will not remove paint like stronger solvents will.)

Subject: RACAL FREQ COUNTER RA 6196a

The RA-6196a is really an antique. I have 2
This was used with early radios like the RA-17 and maybe the 6217(?).
It reads frequencies by using pre-nixie tubes that have a dot rotating in a
circle (remember those?) and stopping at a patrticular digit. The indication is
at the top of the unit. The indicator tubes are missing, but maybe could be
gotten at a hamfest if you're lucky.
Rack mount maybe 2" high. No other info.
A real collector item.

$50 plus shipping

EMail please

From: radiomatt@aol.com (Radiomatt)
Subject: RACAL RA-6397 Synthesizer F/S

I don't have much info but worked with the RA-6200 series of radios (RA 6217,
6225 etc) and maybe others to provide more accurate tuning than the analog
dials. Rack mounted about
4" high, 19" wide. Still in factory box; appears unused. You set frequency
through a set of 10-position switches (0-9). There is a chance that this unit
has freq offsets already built in for these radios, so maybe not suitable as
signal generators, BUT I DON'T KNOW AS I HAVE NO MANUAL. CAVEAT EMPTOR.
$120 + shipping
EMail only please

From: radiomatt@aol.com (Radiomatt)
Subject: RACAL RA-6397 Synthesizer F/S

Sorry...model number is MA 6317 and provides multiple outputs to work with RA 6217, 6218, 6225, 1217, 153, and 117, so that the frequency you dial in to the knobs is the actual received freq on the radio. There are six tuning knobs, and the smallest step is 100kHz. The output is 3.6 to 4.6 MHz.

From: radiomatt@aol.com (Radiomatt)
Subject: Racal VLF adapet RA 6337A

RA-6337A LF converter for the RA6217. It is factory new but
without the front panel and knobs. Still has QC tag! No manual either. My last one went for over $200 on EBay; first $140 gets it (plus $10 Priority Mail in US) here. If
not sold by next weekend will put it on EBay.

BTW that's the last of them (I had bought a half dozen at the Racal factory a long while back). Find a blank rackpanel, cut a 1" sq hole for the tuning dial,
and three holes for the knobs, and you're set.

I have several brand-new 250 Hz crystal filters for the 6778; also fits 6772E and maybe others. 1.4 Mhz center freq. New. Case is rectangular with solder-on mounting posts and smaller connector pins (solder these too). $60 ea shipped in US.

From: tubepwr813@aol.com (TubePwr813)
Subject: Shack Sale List

Shack Cleaning List 6/3/00

All items are as is. Items will be listed as working or not. Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set, as I never had it. I used the rig with a little hombrew power supply that I wish to keep. Selling Price for the above $350 Prefer pickup, but will ship. OFFERS??

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is a beast....hi A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165

Yaesu FRG-7 Shortwave Receiver....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

More to follow.....

455. Wtd: two pages of 32V3 manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-09 00:00:00 UTC
From: Doug_Hensley@GENERALHEALTH.ORG
Message-ID: <0002D985.C22279@GENERALHEALTH.ORG>
Source record: 65323

If anyone has a 32V3 manual, I need pages 3-2 (2332)
and 3-4 (2334) to complete a copy.

Also need schematic to KWS1, version with 4cx250's.
Does anyone know this unit well enough to say whether
there were changes to its design over the production
period? Obviously the power output tubes were changed,
but were there any other significant modifications? What
effect does silicon recs in the p.s. have on the unit?

Thanks

FS: For Heath SB104/A mixer upgrades, or for anyone building mixers, modulators, etc.:

MATCHED QUADS: (i.e. four discrete, long-leaded) hot-carrier diodes. They're Hewlett-Packard's p/n 5082-2805 and according to HP's RF catalog are 1N5711s matched to within 20 mV of forward voltage drop at a forward current of 5.5 mA. Supplied in factory-sealed antistatic packages with 1996 date codes.

Price: $3.00 per quad, or four quads for $10.00, or 10 quads for $20.00.

****
Also available:
****
INDIVIDUAL (i.e., unmatched) 1N5711 Schottky diodes: full-length leads, taped and reeled, $1.00 for 10 pieces.

****
MMICs! Hewlett-Packard DC-2 GHz, 12.5 dB gain, 4-volt powered MSA-0786s. Supplied in antistatic-taped factory packaging; leads configured for surface-mounted applications.

Price: $1.00 each, $5.00 for 6, $10.00 for 15, or $25.00 for 50 pieces, or $40.00 for 100 pieces.

****
* NOS Warranty policy *
****

If you purchase NOS components and find them unsatisfactory upon your inspection, you can return items in as-received condition for a full refund or replacement (if available) within 30 days.

This material is subject to prior sale and is supplied as-is, as new-old-stock (NOS) merchandise, with all responsibility for safe and successful application residing solely with the purchaser.

****
* Shipping per order: *
****

Please add $4.00 for priority-mail postage within the U.S.

Overseas buyers: inquire for postage.

Please make your check or money order payable in U.S. dollars
to Brad Thompson.

Please don't blame my teachers for poor English. They were too busy with diversity programs, liberal agendas, social programs, Union activities, and working to insure hefty salary increases coupled with excellent retirement benefits. Unfortunately, with the short school day and abbreviated school year, the teachers just didn't have the time to teach the three R's.

Messrs. Kennedy, "BMF" and Carl,

Thank you. We now have a little insight into the calibre of "new operator" we can expect.
Yes sir, Herr Kennedy, sir. I will certainly work on my compositional skills and sense of humor.
Since you obviously want to take off the gloves, why don't you have a degree in something less sissified than "fine arts?"
BMF and Carl, your comments were just plain stupid and "the life" that you say I need to get does not allow me enough time to respond to bonehead comments. I guess in your pathetic little world having an opinion constitutes one's need to "get a life."
Geez...

Anyone out there got a junker SX-110? I need that small metalic knob
that goes on the send/rx switch. The one under the meter and on that
metal strip under the dial. Thanks.

Dan/W4NTI

469. FA: Keypad for Collins KWM-380

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-09 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <8hrvem$p5q$1@nnrp1.deja.com>
Source record: 65337
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have a keypad for the Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=349728588

and the description is

This is a mint-condition keypad for the Collins KWM-380 HF
transceiver.When used with the interface board in your radio, enables
direct frequency entry from the keypad, storage of displayed frequency
into one of 10 memories, recall of frequencies stored in memory, and
"stepping through the frequencies stored in memory. The stepping feature
is especially nice for contesting. This is a heavy metal brute, weighs
around two pounds and is mounted on a rubber slab so it stays put on
your operating table. Comes with documentation, cable and connector
all ready to plug into your '380 and go. This is in like-new condition,
owned by a non-smoker who rarely used it. I honestly don't think you
could tell it from new. The last time I saw a KWM-380 keypad
advertised retail it was close to $300, starting bid is about 1/6 of
that; I don't even know if they're still available anywhere else but
right here on good ol' eBay.

Closes 6/11/00.

Thank-you

VERN

You must be that hick 'Vern' from TV, right?

My degree is even "sissy-er(?)" than you think. It's in Stage Lighting Design & Technical Direction. Should that be insufficiently butch for you I have several others: A lesser degree in Electrical Engineering (power) and an even lesser one (AA) in Architectural Engineering.. Sorry I'm not manly enough for you, Vern. I know you like them rough. As a great coincidence, I'm also from San Francisco...say something....go ahead you cracker.

By the way...what a totally ladylike email address you have. Love it!! Please check my spelling again Vern. It's important to me to please you.

In another NG, I was described as an "IRA loving " (true) "guiness swilling paddy" (unfortunately not so true)...So you are, in comparison, quite a pussy. How's that for appropriate usage.

skennedy
sissy guiness swilling paddy who actually went to college.

"Kiss my ass. I bought a boat. I'm goin' out to sea." TONTO

471. WTB: ART 13 parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-09 00:00:00 UTC
From: Mike Srock <msrock@ufc.com>
Message-ID: <5Nh05.3497$x1.145059@news-east.usenetserver.com>
Source record: 65339

Hi there.

I am restoring a couple of ART-13 transmitters and I need some
parts. I am looking for the connectors that hook up to the transmitter
to supply power and remote control etc.

I also need some of the knobs and meters.

I need the manuals and freq chart book too.

If anyone has a power supply built up for one of these things
that they want to part with, let me know.

I will buy basket case ART-13 for parts in lower Michigan.
I will pick up.

Thanks!

Mike Srock

SO, For all you sissies out there, particularly ham sissies. Please let this this throw-back know what you think of his homophobia. Nor do you have to be a sissy. Just a person who thinks others shouldn't be attacked as being "sissies" or perhaps "nerds" or "geeks" or "kikes" or "niggers". I personally am going to look into the FCC reg's in regard to his actions, while representing himself as a ham. The pigs data is:

My guess would be it is a fixed audio level output that would be used
for tape recording. Then it doesn't matter what the volume control
level is set at.

I have a 2B also. I got my first one in 1964, used it with a DX-20.
From time to time I fire it up and it works just like a new one.

Hi Rod and greetings from SE North Carolina. You've actually come
across a desirable tube (in my opinion), as compared to the 811-A.
Don't get me wrong, I like the 811-A just FB. The 811 is a bit more
difficult to acquire. Several older transmitters, such as the Eldico TX-
1 used them in the modulator section. They biased at -9 volts whereas
the 811-A biases at 0 volts. Please don't use them in your 30L-
1...they'll work somewhat but not like a "A" would. The biasing is the
only difference that I know of. Some AM'er or audio builder would
really appreciate this tube(s). 73, JP

writes:

>I bought a few RCA 811 tubes at a hamfest thinking they were 811A's. Can
>anyone tell me what the difference between the two is? I want to use
>them in horizontal operation.

The main differences between 811s and 811-As is the plate dissipation and plate current ratings. 811s are rated at 55 watts plate dissipation and 150 mA maximum plate current, while 811-As are rated at 65 watts plate dissipation and 175 mA maximum plate current. In addition, 811s have very slightly lower interelectrode capacitances.

They can be easily told apart by looking at the plate structure. 811-As have fins on the plate, while 811s are plain.

In almost all applications, 811-As will sub for 811s - but the reverse is usually not true without modification.

The 811-A is OK with horizontal operation if pins 1 and 4 are in the vertical plane.

Let me guess - 30L1?

Hi Rod and greetings from SE North Carolina. You've actually come
across a desirable tube (in my opinion), as compared to the 811-A.
Don't get me wrong, I like the 811-A just FB. The 811 is a bit more
difficult to acquire. Several older transmitters, such as the Eldico TX-
1 used them in the modulator section. They biased at -9 volts whereas
the 811-A biases at 0 volts. Please don't use them in your 30L-
1...they'll work somewhat but not like a "A" would. The biasing is the
only difference that I know of. Some AM'er or audio builder would
really appreciate this tube(s). 73, JP

In the RSGB Publication "Service Valve and Semiconductor Equivalents"
Published in 1967 the A2426 manufactured by the M-O Valve Company is listed
as the equivalent of the CV4082. Only other information is that it is a
tetrode.

The Radio, Television, Industrial Tube, Diode and Transistor Equivalents
manual by BIB. Babani first published in 1960 lists the VX3518 as the CV4082
equivalent.

From: jbr101@my-deja.com
Subject: FA: Keypad for Collins KWM-380

I have a keypad for the Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=349728588

and the description is

This is a mint-condition keypad for the Collins KWM-380 HF
transceiver.When used with the interface board in your radio, enables
direct frequency entry from the keypad, storage of displayed frequency
into one of 10 memories, recall of frequencies stored in memory, and
"stepping through the frequencies stored in memory. The stepping feature
is especially nice for contesting. This is a heavy metal brute, weighs

around two pounds and is mounted on a rubber slab so it stays put on
your operating table. Comes with documentation, cable and connector
all ready to plug into your '380 and go. This is in like-new condition,
owned by a non-smoker who rarely used it. I honestly don't think you
could tell it from new. The last time I saw a KWM-380 keypad
advertised retail it was close to $300, starting bid is about 1/6 of
that; I don't even know if they're still available anywhere else but
right here on good ol' eBay.

Closes 6/11/00.

Thank-you

My guess would be it is a fixed audio level output that would be used
for tape recording. Then it doesn't matter what the volume control
level is set at.

I have a 2B also. I got my first one in 1964, used it with a DX-20.

Date: Fri, 09 Jun 2000 13:20:19 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: FS/FT: Atlas 210X HF mobile rig

For sale or trade:

Atlas 210X solid-state HF mobile rig. Very compact size
(only weighs 7 pounds). Covers 80/40/20/15/10 meters, SSB
and CW. Analog dial. This is a late 1970s rig that is
100% solid-state and runs on 13.8 VDC at up to 20 Amps.
May need some work. Transmitter works fine on all bands;

power output is 100W plus on 80m through 20m, about 80W on
15m, and about 50W on 10m, and I'm told this is correct for
a 210X. Receiver sensitivity doesn't appear to be what it
should on 80m and on 20m thru 10m, but 40m is strong. Rig
is clean, with minor usage wear on the front panel and the
cabinet, but not serious at all. It's a good looking set.
Original hand mic (Shure Bros. 404) is included and is in
great shape. A Cerlox-bound reprint manual, enlarged to
8.5" x 11", is included. This is a complete manual that
includes operating instructions, service information, info
on Atlas accessories, also contains some ads, spec sheets,
and so on. I bought the rig with the intention of using
it mobile, but I got a great deal on a used Alinco DX-70,
so this one went on a shelf. Now, it's gotta go. I have
$170 invested in it, and I'd like to get that back out of
it if possible. In trade, I'd be interested in trading
toward a Drake T-4XC transmitter with AC-4 p/s (of course,
I'll make up the difference in cash). Interested?

Please don't blame my teachers for poor English. They were too busy with
diversity programs, liberal agendas, social programs, Union activities, and
working to insure hefty salary increases coupled with excellent retirement
benefits. Unfortunately, with the short school day and abbreviated school
year, the teachers just didn't have the time to teach the three R's.

Messrs. Kennedy, "BMF" and Carl,

Thank you. We now have a little insight into the calibre of "new
operator" we can expect.
Yes sir, Herr Kennedy, sir. I will certainly work on my compositional
skills and sense of humor.
Since you obviously want to take off the gloves, why don't you have a
degree in something less sissified than "fine arts?"
BMF and Carl, your comments were just plain stupid and "the life" that
you say I need to get does not allow me enough time to respond to bonehead
comments. I guess in your pathetic little world having an opinion
constitutes one's need to "get a life."
Geez...

VERN

You must be that hick 'Vern' from TV, right?

My degree is even "sissy-er(?)" than you think. It's in Stage Lighting Design & Technical Direction. Should that be insufficiently butch for you I have several others: A lesser degree in Electrical Engineering (power) and an even lesser one (AA) in Architectural Engineering.. Sorry I'm not manly enough for you, Vern. I know you like them rough. As a great coincidence, I'm also from San Francisco...say something....go ahead you cracker.

By the way...what a totally ladylike email address you have. Love it!! Please check my spelling again Vern. It's important to me to please you.

In another NG, I was described as an "IRA loving " (true) "guiness swilling paddy" (unfortunately not so true)...So you are, in comparison, quite a pussy. How's that for appropriate usage.

skennedy
sissy guiness swilling paddy who actually went to college.

"Kiss my ass. I bought a boat. I'm goin' out to sea." TONTO

SO, For all you sissies out there, particularly ham sissies. Please let this this throw-back know what you think of his homophobia. Nor do you have to be a sissy. Just a person who thinks others shouldn't be attacked as being "sissies" or perhaps "nerds" or "geeks" or "kikes" or "niggers". I personally am going to look into the FCC reg's in regard to his actions, while representing himself as a ham. The pigs data is:

Subject: titan amp

I've aquired an old amp labeled only "titan 6 meter amplifier". I'm looking for info (manual,diagram,anything). Ten-tec says they did not make it. Specifically I'm wondering what the rca jack on the back is for and if it can be modified for any other bands.

Subject: Vintage Ham Receivers - New Photos on Website

Do you enjoy looking at old ham gear? We just added a new page to the Virginia City Radio Museum's website called "Vintage Ham Gear" - It is mostly pre-WWII Ham receivers. Here's the URL:
http://www.radioblvd.com/hamgear.htm

If you like all types of radio from a 1912 Spark station up to Post-WWII sets, you might want to look at the "Photo Gallery" - here's the URL for the whole website:
http://www.radioblvd.com

Enjoy,

Subject: WIDESPREAD INCOMPETENCE AT BELL ATLANTIC

Friday, June 9, 2000
-
It would seem that in every category of service BA offers, there are a whole lot of unhappy customers. With the possible exception of voice-only service, BA has littered the Internet with consumer

horror stories.
-
Let's take DSL for example... You need only spend a little time
in COMP.DCOM.XDSL to learn that this is a service that BA is just
not in a position to support and should probably not be offering at all.
Network availability is abysmal (less than 50% for some people); as
evidenced by last weeks' outage, where major parts of the mid-Atlantic and
northeast were without DSL service for 72 hours and longer.
Multiple subscribers report calling into tech support, only to
be told that there were no reported problems with the network.
Could anything be more frustrating?
-
It also appears that BA is not at all committed to staffing their
tech support and customer service lines with properly trained,
articulate, informed and technically capable individuals.
It's as though these people were simply grabbed off the street and
required to man the helpdesk phones - like conscripts into some
rag-tag militia.
-
Perhaps the US Government should take a look at Bell Atlantic in
much the same way it's currently looking at Microsoft, with a similar
remedy in mind.
-

Subject: WTB: ART 13 parts

Hi there.

I am restoring a couple of ART-13 transmitters and I need some parts. I am looking for the connectors that hook up to the transmitter to supply power and remote control etc.

I also need some of the knobs and meters.

I need the manuals and freq chart book too.

If anyone has a power supply built up for one of these things that they want to part with, let me know.

I will buy basket case ART-13 for parts in lower Michigan. I will pick up.

Thanks!

AS LISTED ON E-BAY LAST DAY!!!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=351481988

Got an old "Boat Anchor" rig you want to get on the air? Well, here is
the perfect "Vintage" way to go. This
Johnson VFO was originaly mated to an old Viking 1 that I gave
away to a friend about a year ago. It was going
to be my "Boat Anchor" rebuilding project as the rig needed paint
and a bit of rework to return it to is original
bueaty. The VFO stayed behind as he didn't need it. So, I think
it will work fine as it looks ok inside. Fairly clean
for its age. Shows it age on the outside but not bad considering.
The dial reads very well and the tuning is still fairly
smooth. A few scrapes and scuff marks but that just means it was
getting used. Heck, its about my age and I am
not shure who is in better shape. ;>} It ain't a museam piece,
OK, but I don't expect to get museam piece prices
either. As with all used equipment, it is sold "as is". Buyer
pays actual shipping costs only from the Peoria Arizona
area. Use USPS. Will double box and pack. Payment in US Funds
only. Cash, (not recomended but ok), USPS
Money Order, certified check, original check, or credit cards via
PayPal are all ok. No personal checks please. It
only slows down the whole process as I would have to wait for it
to clear so, I DON'T DO PERSONAL
CHECKS. No out of country orders.

506. Maryland Hamfest - 18 June

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-10 00:00:00 UTC
From: windbrkr@erols.com
Message-ID: <MPG.13ac3a75c831324298975c@news.erols.com>
Source record: 65374

The Frederick Amateur Radio Club (FARC) presents the annual
Father's Day Hamfest on Sunday, June 18, 2000
from 8:00am to 3:00pm, rain or shine.
(Access for tailgaters opens at 6:00am)

It's at the Frederick County Fairgrounds on East Patrick Street in
historic Frederick, Maryland. Easy access from I-70, I-270, US-15, US-
40, etc. Plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating,
Indoor Commercial Vendors, VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00 donation.
Tailgating spaces are $5.00 each + general admission
Indoor tables are $10.00 each before June 10th, $15.00 after.

One of the largest and most popular hamfests in the
Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net or direct to me

Thanks & 73,
Bob K9CMR

507. Cleaning dial plastic cover

Newsgroup: rec.radio.amateur.boatanchors

I just purchased a very nice National NC-46 receiver. Everything cleaned up very nicely. The only thing that I need help on is the plastic clear dial "glass". It is 1/8" clear plastic with a lot of scatches. Is there any way to polish these scratches out or am I just better off getting a new one made from Plexiglass or even one cut from glass?

Thanks for the bandwidth.

Hello, go to a well-stocked auto supply store, and ask the clerk to show you where the plastic polish is for motorcycle fairings (windshields) Use it, and it should clean up good...

I used toothpaste once to do the lenses on my 1969 Camaro...they came out scratch-free and new looking..'.Crest Whitening' is what I used, with a terrycloth towel...after you get the scratches out, polish it with a bit of non-abrasive car wax.

Look for a product called simichrome,It works wonders on plastic
lenses,scratched cds and also works wellon metal.I found mine at a
jewelry show but recently discovered it at the local motorcycle
shop.If all else fails,I've seen it on Ebay selling for about 7.00 a
tube,I paid 5 for the same size locally.

Subject: Collins Mechanical Filter info wanted!

Hello. I have a nos Collins filter that I am trying to get some info on.
It is 6" long 1" in diameter
Type F 72 Z7
Ser. 6641
P/N 526 9398 00
5915 724 6621
C1 180
C2 310
C3 245 C4270
Loss 7.9

What is the opperating freq., bandwidth and any other info you might have.

Thanks,
Randy.

Hi,

It is a multiplex sideband filter. (they come in sets from 64 to 108 kHz
with 4 kHz channel spacing for multiplex voice systems.)

the 526-9398-00 is a 72 kHz, Lower Sideband with a bandwidth of 2.9kHz
at 1.5 dB down. I do have a graph from which I can estimate that the
bandwidth at 6 DB down is about 3.3 kHz and at 60 dB down is about 5
kHz, roughly 68 to 71 kHz. I'm afraid that's all the info I have - hope
it helps.

Subject: FS: COLLINS HF8023 1 KW HF RF AMPLIFIER WITH HF8031 POWER SUPPLY

The HF-823 is a 100% solid state RF Amplifier that covers 2-30 MHz.
These are part of the very popular HF-80 Radio System currently used by
the U. S. and many foreign governments as well as commercial firms
around the globe.

Our HF8023 RF Amplifier with HF8031 AC Power Supply is NEW UNUSED and is
supplied with interconnect cables and technical manual. This group is
is priced at $7,500 FOB Somis, CA.

These items are very rare and to have them in unused condition is almost
unheard of.

Contact me for further details.

You think gardening is cheap?? Try it and I am sure you will be back.
Try golfing, hiking, how about horses and on and on...Race cars
I am finding that all hobbies are going about the same UP UP UP and some
have always been UP I think it has to do with us 50 year old baby
boomer with to much money. High demand does it every time. I have sold
some old Heathkit manuals for what I thought was big money but not quite
this big. But if no one is bidding on it then it really doesn't mean
anything..Also Rare does not equate to big money if nobody doesn't want
it.

Great responsec. That's a good hobby to have right now and probably for
a long time to come and one that actually makes money instead of costs.

I have some, but they are just plain ordinary jacks, no pretty chrome so
I don't know if they would be suitable. If you can use one send me your
address and I'll mail you one.

Subject: NOS NC-100ASD Manuals $15 At Fair Radio

Just to make the auctioner of the $100 NC-100ASD manual happy ...

I bought 2 NC-100ASD from Fair Radio about a month ago and they are
NOS. These manuals have an addendum sheet for the NC-100ASC stapled
to the inside of the front cover. The C and D models are the same
except for speaker impedance and this sheet lists the half dozen
component differences associated with the different impedances.

http://www.fairradio.com and go to the products section and then to
manuals. The manual is also listed in their current edition of their
catalog.

From: Colleen Gillard <cgillard@mediaone.net>
Subject: TCS transmitter, questions, placard?

Hi --

I recently acquired a TCS transmitter. It is finished grey rather
than black, I'm wondering what the distinction is.

It had some mods in the relay and mode circuits that made
it AM only, apparently. Is this a "standard" mod?

The unit is spec'd to run the finals on 400v at 200 ma on CW...
It looks like it could handle a fair amount more. Anybody
know how much is safe for these units?

I'm curious about why the transmitter uses only one final in
AM mode. It seems like a pair of 1625's should be capable
of enough audio power to plate modulate a pair of 1625 finals...

Reasons I thought of:

* be extra conservative with the higher duty cycle of AM
(the cabinet does seem a little low on ventilation)

* not enough gain to get that much audio power with tube
lineup

* the modulation transformer says it is rated at 20 watts. maybe
they were trying to keep the weight down?

The unit I got is missing the placard on the panel... anybody have a
junker
that could supply one, or know where I might find one?

>Do you have the original AC Charger #41-134-1?
>I would like to know the voltage and current.
>Thanks,
>Robert

Robert, I'm using an old Shiva LanNet Adaptor with mine (AC out @ 9VAC, 900 mA) which charges the old Gates cells just fine. I'm lucky, had a few old sets of Gates cells around and found a good set to replace the dead ones in the MiniScope. If you change to NiCads you may have to change the charging circuits, as the orig. Gates cells were sealed lead/acid batts.

Hope this helps!
Andrew

From: tubecntral@aol.com
Message-ID: <20000612141645.15857.00006031@ng-md1.aol.com>
Source record: 65391

Hello, I have a 101ZD Yaesu radio that I was given by a family member before he passed away.

The VFO knob spins very nice and smooth, but is somewhat wobbly when it spins...the shaft is tight, but the knob seems a little off center.. Is there an adjustment for it?

Also, the S-meter will not show any movement or detect incoming signals, although they are being recieved... I haven't transmitted on anything but a dummy-load, but the meter works fine for output readings and tuning...any tips here on what to check?

Many thanks for your insight...One day i'll get a ticket and actually USE it !

Hello Charlie:

I have both of these receivers in my radio shack, and they are a pleasure to turn on and listen as you may probably know.

We used them when I was aboard ship, and they were indestructible. Actually, you can copy SSB with them, and they sound great. For broadcast, they have the double RF front end, so you can copy distant stations without interference.

Interesting that you should be restoring them - great. If you require any assistance, let me know.

At this time, I don't have any spare parts, except for tubes, but these receivers are brutes. I have seen them at Dayton, however some time ago. You have to keep searching and asking.

I would like to hear from someone that has a Heathkit Apache Transmitter
that they are not using, and would be willing to sell.
Cosmetic condition is not important, but magnetics must be in good
operating condition.
I need the LV transformer to restore an Apache that I am planning to put
into service.
Please reply via my e-mail address below.

> of you ARE even remotely socially acceptable."
>
> Steve W2ZR
>

Well, actually, if what the poster meant was "any" in the sense of "a single one", then "is" IS correct. "Any" is the subject of the verb, while "you" is the object of the preposition "of" and therefore cannot the the subject. Substitute "a single one" for "any", and pare down the sentence to the essentials, and "is" will be seen to be correct: "It's not like a single one is acceptable."

And BTW, "grammer" is correctly spelled "grammar" (unless you're referring to your grampa's wife).

There. I feel SO much better!

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $395 each plus shipping.

I don't think this is going to be of any help OM, but when I was in Santo Domingo, Dominican Republic, I smoked the choke in my HT-37. Local hams sent me down to the city's "radio row" where I find a couple of guys working off a street corner who specialized in rewinding transformers. They did an excellent job and it cost me a lot less than 135.00 Good luck. 73 Bill

> Great Harold! It's nice to hear stories of family owned gear staying in the family and enjoyed years later. I hope this happens with the few radios that I own. The good points about the HQ-170, are that it (in my opinion) was one of the better receivers available in it's days. Hams who used the HQ-170A were well equiped. As for use today, there are several hams who use them on the air with good results. They maintain a steadily increasing collectors value. Osterman's book, Shortwave Receivers Past and Present rates it new as a 4 star receiver with 5 being in the top ranks. Hammarlund's generally fall into this category and the 170A is among the premiers of its line. The bad news is really not that bad...used Ostermans book rates it used as a two star receiver. Information in Ostermans book is very debatable but it does serve as a good starting point. Also it is a ham band only receiver that lacks the general coverage features that some of the other receivers made in that era had. This is all without getting into the electronic specs that would complicate the answer to your questions. Tubes are easily available. There are some retail outfits like Antique Radio Supply and discount price individuals selling tubes. Beware when buying from individuals. You may get a used tube (which may be worth $.25) that is described as new. There is someone in Greensboro, NC (someone help me out) by the name of Kirk who I ALWAYS buy from when I see him at a hamfest (radio swap meet). He always represents his stuff properly. For the most part, those tubes in the HQ-170A go anywhere from $3.00 to $8.00 each. DO NOT make the mistake of replacing all of the tubes in that receiver to make it work better. Generally an alignment is what the doctor orders. All that replacing the tubes may do is throw it out of what alignment is left. I highly recommend having it reconditioned by a professional (if you plan on keeping it) for many years of enjoyable listening. Good luck and regards, John. P.S., Flames and spelling lessons directed to me personally, please!

> >it helps.
> >
> >Dave

The USB one is 526-9193-00

My list shows USB (Z-4) in 4 kHz steps from 60 to 104 kHz, and LSB in two series from 64 to 108 but one set (Z-7) is 2.9kHz wide and the other (Z-8A) 2.4 kHz.
All are the same size (case L).
However, each set uses a differing dB reference level so a true comparison is difficult unless you can get hold of the complete spec sheet - I just have the General Catalog with basic specs for the complete line.

Dave

I have an Electro-Nav EN-R2 receiver that I need a service manual for. This is a rack mounted receiver with liquid crystal display. If you have a manual or access to copy, please let me know.
Thanks,
Ron,AA5NI.......

568. FS: Vintage Telefunken RES 094 valves

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-13 00:00:00 UTC
From: arnoldg@sf.telia.no
Message-ID: <3945b5f4.370649@news.telia.no>
Source record: 65422
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.amateur.boatanchors

RES 094 is a very nice, old Telefunken valve. I have 5 pcs for sale.
Four in original boxes and one in white box. The valves are excellent,
but the boxes are not very nice at all. (The white box is okay...)
These valves are very hard to get these days. NOK 360.- each. That's
about USD 40.-/each
E-mail me if interested.

Best regards,

Arnold Goksyr

Subject: 101 ZD Yaesu VFO knob, & other question

Hello, I have a 101ZD Yaesu radio that I was given by a family member before he passed away.

The VFO knob spins very nice and smooth, but is somewhat wobbly when it spins...the shaft is tight, but the knob seems a little off center.. Is there an adjustment for it?

Also, the S-meter will not show any movement or detect incoming signals, although they are being recieved... I haven't transmitted on anything but a dummy-load, but the meter works fine for output readings and tuning...any tips here on what to check?

Many thanks for your insight...One day i'll get a ticket and actually USE it !
Regards,
Joe Pratt

Well, actually, if what the poster meant was "any" in the sense of "a single one", then "is" IS correct. "Any" is the subject of the verb, while "you" is the object of the preposition "of" and therefore cannot the the subject. Substitute "a single one" for "any", and pare down the sentence to the essentials, and "is" will be seen to be correct: "It's not like a single one is acceptable."

And BTW, "grammer" is correctly spelled "grammar" (unless you're referring to your grampa's wife).

There. I feel SO much better!

The USB one is 526-9193-00

My list shows USB (Z-4) in 4 kHz steps from 60 to 104 kHz, and LSB in
two series from 64 to 108 but one set (Z-7) is 2.9kHz wide and the other
(Z-8A) 2.4 kHz.
All are the same size (case L).
However, each set uses a differing dB reference level so a true
comparison is difficult unless you can get hold of the complete spec
sheet - I just have the General Catalog with basic specs for the
complete line.

From: "Harold Rappold"
Subject: Hammarlund HQ-170a

I inherited this receiver 5 years ago when my father-in-law passed away and
I have a couple of questions about it. What level of quality is this unit
and Hammarlunds in general? Was there a "companion" transmitter for this
receiver, and if so, do any ever show up for sale? Are tubes still
available? Thanks in advance.

Date: Tue, 13 Jun 2000 01:25:22 GMT
From: ae4en@aol.com
Subject: Hammarlund HQ-170a

> Great Harold! It's nice to hear stories of family owned gear staying
in the family and enjoyed years later. I hope this happens with the few
radios that I own. The good points about the HQ-170, are that it (in my
opinion) was one of the better receivers available in it's days. Hams
who used the HQ-170A were well equiped. As for use today, there are
several hams who use them on the air with good results. They maintain a
steadily increasing collectors value. Osterman's book, Shortwave
Receivers Past and Present rates it new as a 4 star receiver with 5

being in the top ranks. Hammarlund's generally fall into this category and the 170A is among the premiers of its line. The bad news is really not that bad...used Ostermans book rates it used as a two star receiver. Information in Ostermans book is very debatable but it does serve as a good starting point. Also it is a ham band only receiver that lacks the general coverage features that some of the other receivers made in that era had. This is all without getting into the electronic specs that would complicate the answer to your questions. Tubes are easily available. There are some retail outfits like Antique Radio Supply and discount price individuals selling tubes. Beware when buying from individuals. You may get a used tube (which may be worth $.25) that is described as new. There is someone in Greensboro, NC (someone help me out) by the name of Kirk who I ALWAYS buy from when I see him at a hamfest (radio swap meet). He always represents his stuff properly. For the most part, those tubes in the HQ-170A go anywhere from $3.00 to $8.00 each. DO NOT make the mistake of replacing all of the tubes in that receiver to make it work better. Generally an alignment is what the doctor orders. All that replacing the tubes may do is throw it out of what alignment is left. I highly recommend having it reconditioned by a professional (if you plan on keeping it) for many years of enjoyable listening. Good luck and regards, John. P.S., Flames and spelling lessons directed to me personally, please!

>I would like to know the voltage and current.
>Thanks,
>Robert

Robert, I'm using an old Shiva LanNet Adaptor with mine (AC out @ 9VAC, 900 mA) which charges the old Gates cells just fine. I'm lucky, had a few old sets of Gates cells around and found a good set to replace the dead ones in the MiniScope. If you change to NiCads you may have to change the charging circuits, as the orig. Gates cells were sealed lead/acid batts.

Hope this helps!

From: Tony Faiola
Subject: Want RBB or RBC parts.

Hello Charlie:

I have both of these receivers in my radio shack, and they are a pleasure to turn on and listen as you may probably know.

We used them when I was aboard ship, and they were indestructible. Actually, you can copy SSB with them, and they sound great. For broadcast, they have the double RF front end, so you can copy distant stations without interference.

Interesting that you should be restoring them - great. If you require any assistance, let me know.

At this time, I don't have any spare parts, except for tubes, but these receivers are brutes. I have seen them at Dayton, however some time ago. You have to keep searching and asking.

Source record: 65429

Clapp Eastham R4 was offered at $25.00 as a complete regenerative receiver in 1923. The 1914 date is the Armstrong regenerative circuit license patent date. The A4 was offered at $25.00 as a matching two stage audio amplifier. Source: Radio Manufacturers of the 1920s, Volume 1, Alan Douglas, Author.

These units are very scarce and highly collectable today.

>

May I respectfully suggest that it's time for all of us to simply ignore this
blowhard, and I use that term knowingly, as not being worth the bandwidth?

This poster is a classic example of a certain psychopathology that works like
this:

What is different is not comprehended by the provincial.
What is not comprehended is inconceivable to the impoverished of
imagination.
What is inconceivable is feared by the fearful.
What is feared is hated by the insecure.
What is hated becomes both the vehicle and, paradoxically, also the very
object, of opprobrium on the part of those who are insecure with their own
identities and subconsciously fearful that they, in fact, are much more LIKE
those they fear and hate than their conscious minds can tolerate realizing.

In this case, homosexuals become both the object of vilification and the
preferred paradigm of insult, despite the fact that any poster's sexual
orientation is utterly irrelevant to the discussion, unknowable to BigUnit, and
finally not even perceived as insulting by the objects of his tirades, who
understand the source. Yet deviant (in his mind) sexual orientation is the mode
to which this psychopathological individual gravitates inevitably. His
monomaniacality is stunning. He can't get out of this rut! It has entrapped
him! And there is a good reason for that.

Even his chosen screen moniker fairly shouts ambivalence and insecurity: "Look,
everyone! I've got a Big One!" A more pathetic plea for respect could hardly be

imagined, or a more heart-rending attempt, whistling in the dark, to convince himself of his own worth and identity. And he also, significantly and undoubtedly subconsciously, in choosing to identify himself AS his penis, picks the central organ of the homosexual lifestyle! Coincidence? I don't THINK sooo....

Additionally, I would not discount for a moment the possibility that BigUnit is actually female, and very, very butch. Many of her figures of speech, as well as her in-your-face (deliberate choice of metaphor), intolerant aggressiveness, echo the stridency of Feminazis and of activist fairies like the Queer As Hell and ActUP! crowds.

I think these facts speak eloquently for themselves. BigUnit, keep telling yourself that you're straight....

Last word, everyone. OK?

Subject: CV4082 Data Needed.

Can anyone supply electrical and pinout
data for a CV4082 vacuum tube?
Equivalents are E2266 and A2426.
I have tried many websites without
success.
Any help would be greatly appreciated.
Please reply soon.

A2426 is a vidicon tube, tube pin-out pattern 8HM, fil. 6.3 volts @ 0.090 amps.

I wish I could scan the base pattern for you, but I haven't a scanner...
Source book is Electron Tube Locator, by George Fathauer.
The A2426 is the same tube as an 8541.

Hope that helps some..

This is not correct. A2426 is nice beam-power valve, at least if it is
made by GEC. It has an octal base. I don't know of any other A2426
valve.
I can't find CV 4082 in any of my list. Are you sure it is the correct
number?

Yes, Arnold, it is the correct number. You are correct in saying
that the A2426 is a beam tetrode with an octal base (and an anode cap).
It is made my GEC.
Do you have data on the A2426?
Best wishes,
Duncan.

Subject: FS:NC-303

Hi,
I have for sale a National NC-303 receiver. The RX covers 160-10 meters.
The dial is also calibrated to cover 6,2,11/4 meters with converters
(not included). Has XCU-300 xtal. calib. and copy of the owner/maint.
manual. Front panel is a 9 out of 10 and the cabinet is an 8 out of 10
only because of a couple small nicks. No rust, dents, corrosion.
Operates excellent on all bands and is well calibrated. This is a nice
radio. $275 I will split shipping or if you pick it up I will negotiate
the price a little. Radio is located in CT. 06248. Thanks Gary

Subject: HELP!Heathkit Apache

The voltages used look pretty standard for HF transmitters. See if the
transformer used in Heathkit's HP-23 power supply will fit and work for you.

Subject: HELP!Heathkit Apache

A LOT more work, a hold lot less expensive.

Unless the transformer is completely gone, open it up and replace this one wire. Other than rewinding it (done it a couple of times), or having it done (I have no idea who would do this), Peter Dahl is the only source I know of.

Date: Wed, 07 Jun 2000 08:44:26 -0400
From: cen45169
Subject: HELP!Heathkit Apache

I recently purchased a Heathkit Apache Transmitter in excellent condition and am interested in putting it into service, however I have developed a major problem.
After thouroughly checking it out, and applying power in 30 volt increments over time increments of an hour, everything was looking good until the last 30 volt increment which brought the applied voltage up to 120 volts. after about a minute at the normal applied voltage, I heard a loud arching noise and the two 7 amp inline fuses blew. This arc was caused by the fact that when this unit was assembled one of the high voltage leads from the power transformers was pinched between the transformer flange and the chassis.
This caused the high voltage transformer to become shorted and consequently permanently destroyed with an internal short.
I am in need for a transformer to restore this Transmitter.
Heathkit part number is 54-65 with the following voltages.
Primary 115 volts 60 cycles
Secondary voltages as follows.
5VAC @ 4AMPS
5VAC @ 2AMPS
6.3VAC @ 3.3 AMPS
6.3VAC @ 9 AMPS
800VAC CT @ 175 MA
240VAC CT @ 20 MA
Any help in locating a transformer to replace the defective one would be very much appreciated.

Anybody that may be able give me a lead in locating a transformer for this transmitter
please e-mail me at the following address.

Subject: Need 7027 Modulation tubes

7027A tubes seem to be over-priced these days. An alternative would
be to replace them with 6550s. There are 2 web sites that deal with
Ranger mods and I am seriously considering modifying my RII. The mods
are a good alternative to 7027As. Improved audio and better RF
performance due to power supply improvements.

Check W3AM's web site for more info.

You might want to try Antique Electronic Supply at
"http://www.tubesandmore.com/". They have new and used
7027As. The used ones go for $23.30 but there is no price
on the new ones.

From: WB3KUM/9
Subject: Problems with KightKit T-175 Linear (again)

I'm back, completely frustrated. I will freely admit I got ripped off.
The IDIOT that had this before me, in addition to completely hosing up
the B+ supply, worked very hard to replace the 6JE6s with 6KM6. He had
to unsolder and swap the plate caps!! Works OK on 10 meters, doesn't
work on 6 meters at all. I get more power out in bypass. So much for
this weekends VHF contest.

Opinions, do I

spend $70-$100 on correct tubes.
use it as a basic chassis for some other tube(s), i.e. 6146, 807, 829B,
2E24, 2E26, ?
are there any good simple plans for a 6 meter linear using one of these
newer power modules?

Sorry, $300+ for a TE or other is currently out of my price range I
really don't need that much power. 50 to 100W is fine.

Many thanks to all in advance.

Dennis WB3KUM/9

Of all the tubes mentioned the 6146 is the only thing worth
considering. If the amp used "sweep tubes" then you will have to
reduce the plate voltage to around 800 under load.

Considering how "hosed up" the thing is and it works somewhat on ten I
would look at the input and the output circuitry. Sounds to me like it
was butchered to work on 11 meters, and thats all.

Been working on a tube rig and while replacing some .01s and the filter caps I've noticed that the brownish-red circuit board material used on the boards and the terminal strips melts at the touch of a soldering iron just a little quicker than I would like (or expected). This begs two questions: 1) any suggestion for getting this gooey melted crud off of the copper circuit board traces? 2) some of this goo ends up mixing with the melted solder while the solder joints look good, I've got to wonder if they're cold. Any thoughts?

Your absoluteley wright.

Just kidding.

What the world needs is a spell-checker kill file that screens out any post with more than one misspelling. The net would be a much nicer (and quieter) place.

From: "Roger Halstead"
Subject: Spelling and grammar (or a lack thereof)

Just wate until your over 60 and you 60 WPM typin goes down hill...What was fat fingering becomes a way of life...then you fingers dicide that "a" belongs in nearly all words, that "d" and "k" have traded places....That's about the time you need to hire a proof reader as the ones built into the

word processors do not catch many of the gramatical errors mixed in with the spelling errors and you start tending toward runon sentences with random punctuation,

For those who don't need spell checkers and syntax checkers and have never mispelled a word in their lives, just wait until you suddely can't remember the word you were trying to spell. And...all of this happens *before* you get old. <:-))

Then with strong bifocals you can tell there is something on the screen, but often have to take them off to read it, or put them on to read it, or just throw them in a corner.

Gettin' old is Hell, but it sure beats the alternative!

Of course I'm not, and I didn't claim to be. I do, however, have
at least a passing grasp of the use of punctuation, capitalization,
correct spelling, complete sentences, and coherent thoughts within
those sentences!

By the way, your post to me is full of its own spelling and grammar
errors. May I assume that you don't live in a glass house?

Okay, folks, what happened to spelling and grammar? How many
times have you seen an ad like this on a newsgroup recently?

"for sell amatuer ham raido equiptment not suer what it does
im not a ham not in to bad of shape dont no if it works came
from an old mans estate been seting on a shelfs in garage for
years their are 8 items whant to sale all for one money make
me a offer im not to suer what their worth so dont rip me of
thanks and 73's.bubba"

Presumably, these ads are being posted by adults, and it's
probably fair to assume that they at least graduated from
high school. I was always under the impression that one
had to know how to read and write to graduate. Apparently,
I was wrong.

I have my Nomex firesuit on (I'm sure the "flames" will be
flying my way soon).

Subject: Spelling and grammar (or a lack thereof)

I can see the bad spelling and grammer as being forgiveable in only two instances. One being that the person is a foreigner and has not yet learned sufficient English. Two being that the person is from south of the Mason Dixon line and is the innocent victim of the extensive inbreeding in that area. In this area it is also common for residents to refer to "my senior year" and actually be talking about the 5th grade.

Subject: Tektronix plug in question

Colin,

Many thanks for your reply! A couple of questions though. Are the letter
series units starting with 1 the only ones that fit? My 551 manual only
covers the single letter types (type CA excepted). I have seen some
starting with 3** and 5**.

And yes this scope definitely fits in the boat anchor category! I have the
supply and it still works well. I got it from a defunct stereo shop 10
years ago w/cart etc..

I didn't get the manuals though. 10 years later, I bought a set on ebay and after talking to the seller they turned out to be the very ones that came with my scope!

Thanks,
Rob

Hi

I am restoring a Hallicrafters S 22R, the marine version of the S 22 circa 41

Require silver metal bands which are attached to each end of the cabinet, which wrap around the front corners.

Also interested in other parts, including dials and dial covers.

See picture at:

I have an ft-101ex I would love to sell or trade. I don't know what it is worth, the AM recieve is a little low, and the transmit power is a little low, but I think that is nothing big, i think anyone who knows the radio can fix it easy. I would like to trade, possibly with cash for a radio I might be able to use for a backup rig, maybe even something else with minor problem/s If interested, email me at n1umj@mediaone.net thanks, and 73

Extremely rare 1928 model SILVER-MARSHALL "Round The World" FOUR
receiver in very good condition, working, includes tubes, coils and a
set of 1925 Brandes headphones.
See page 95 of June 2000 QST for an interesting writeup about this
hard-to-find receiver (the first commercial short-wave radio ever to use
a tetrode tube); tunes 17.4 to 204 meters. The QST oldtime radio author,
K2TQN, says he has only seen 2 of these sets for sale in good condition
during the past 4 years.
The reserve price has been met and this radio will be sold in 2
days. At this point, the high bidder will "steal" it.
For a picture of my radio & more info, go to this page and click on
SILVER MARSHALL - thanks - Stan, WA2BAH

I wonder if the author was familiar with the Leutz "Shortwave Unit" - a complete regenerative receiver using plug in coils and a type 222 tube circa 1927 but, alas, far less common than the Silver Marshall Round-the-World Four.

Try any chrome, brass or silver polish. They will all work. The
silver polish is the finest so slower for removing scratches,
but great for finishing. In the U.K. we have 'Brasso' for the
first cut then 'Silvo' or `Solvol Autosol` for finishing

Hi,

I came across these wonderful Telefunken RS 235 triodes. They are quite similar to the better knows RS 237 but they have another socket and a topcap.

I have two pcs and this is probably your last chance to get such valves. I have never seen these before, and they seem to be even more rare than the RS 237.
I will take a picture of them tonight so I can send a pic with e-mail to those who are interested.

Some technical data: Vf 10V/3.5A Va 1000V S=4.0mA/V u=12
Pd=100W

Serious offers will be considered.

Best regards,

Arnold Goksyr

This fellow may be a poster-boy, but it isn't for ham radio, I am sure.
Notice, no call sign, and a preponderance of other clues (name, diction,
tone) that suggest he is a bootlegger and/or "freebander." Please form
an opinion of hams and ham radio based on what you hear on the bands,
not on what you read on USENET, and welcome!

And it will go down down down, as the novelty passes. It's just a cycle,
and collectibles follow it more closely than most other markets. Give it
another 6-8 years, and watch the prices on old rigs (except a few real
rarities, like the SX-88, HRO-500, some Collins stuff) come back down.

594. ART-13 autotune fix help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-14 00:00:00 UTC
From: Mike Srock <msrock@ufc.com>
Message-ID: <KQV15.23386$pd4.623107@news-east.usenetserver.com>
Source record: 65198

Help with ART-13 autotune needed.

The autotune on my ART-13 has a mechanical problem I hope
someone can help me with.

There is a screw with a floating nut on the right front side of the
transmitter
that runs between two finger type switches. This controls the autotune
cycle and reverses the motor. The metal insert in the floating nut that
runs back and forth down the screw is slipping inside of the wood-like
housing that rides on a shaft to keep it from spinning free. Anyway, the
autotune ran for quite a while before I realized the slipping was happening
and
the floating nut was not moving. I need to know how to set the autotune
so that it is operating correctly and reversing direction at the correct
point again.

Does anyone have a copy of the manual that has autotune maint instructions?
Is there an easy way to know where to set the autotune?

Thanks for any help!

Email direct please!
msrock@ufc.com

5-inch oscilloscope, Jackson model CMO-3, I'm guessing ca early '60s because of the three-wire cord. Extremely clean, with three probes (straight though with clip leads, demodulator, and low-cap), two of them in the original boxes. No manual. Nice bright trace, triggers on internal calibration and external 60Hz. Snazzy chrome bezel if you like stylish touches.

It ain't state of the art, but it sure is pretty...and it works to the extent I tried it out. Jackson was a solid name in test gear, as oldtimers on this list know.

Prefer local pickup in Washington DC area but will consider shipping.

$50 plus shipping OBO.

I have a very nice condition Collins 75A3 receiver SN 1206, that I would like to trade. It is complete and in working order. The front panel and cabinet are in excellent condition with no dings or dents. The lettering on the front panel is mint, as are both dials. Chassis is dusty, and could use a cleaning. Some of the controls are in need of a shot of de-oxit, (a little scratchy) but the radio is working. I got it and planned to clean it up and use it, but before I got around to it, I acquired a 75A4.

The radio comes with the stock filter, and a Homebrew plug-in NBFM adaptor. The only mod I know of is an added PL-258 plug on the back. Not sure what it is for (muting circuit?) I have a copy (not original) of the manual.

Not really interested in selling. Would like to trade for another radio or radios. What do you have to trade? Collins, Drake, Hallicrafters, Johnson, Hammarlund, Ten Tec, Kenwood, Yaesu. I'm just looking for something new to play with.

See the radio at
<http://www.mindspring.com/~ekugrad/images/MY_75A3.jpg>

I am located near Raleigh, NC

Thanks and 73

>Well, actually, if what the poster meant was "any" in the sense of "a single
>one", then "is" IS correct.

Sorry, you're wrong. You cant use "is" unless you say "anyone" or, as you put
it, "a single one". But if you say, "if any of you...etc.", you must use
"are".

Subject: choke rewinding

I don't think this is going to be of any help OM, but when I was in
Santo Domingo, Dominican Republic, I smoked the choke in my HT-37.
Local hams sent me down to the city's "radio row" where I find a
couple of guys working off a street corner who specialized in
rewinding transformers. They did an excellent job and it cost me a
lot less than 135.00 Good luck. 73 Bill

From: Andrew Cowley <andy.cowley@uwe.ac.uk>
Subject: Cleaning dial plastic cover

Try any chrome, brass or silver polish. They will all work. The
silver polish is the finest so slower for removing scratches,
but great for finishing. In the U.K. we have 'Brasso' for the
first cut then 'Silvo' or `Solvol Autosol` for finishing

Andy Cowley

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and
also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $395 each plus shipping.

From: WA2BAH@webtv.net (Stan Israel)
Subject: FA: 1928 SILVER-MARSHALL "FOUR" - last 2 days

Extremely rare 1928 model SILVER-MARSHALL "Round The World" FOUR receiver in very good condition, working, includes tubes, coils and a set of 1925 Brandes headphones.
See page 95 of June 2000 QST for an interesting writeup about this hard-to-find receiver (the first commercial short-wave radio ever to use a tetrode tube); tunes 17.4 to 204 meters. The QST oldtime radio author, K2TQN, says he has only seen 2 of these sets for sale in good condition during the past 4 years.
The reserve price has been met and this radio will be sold in 2 days. At this point, the high bidder will "steal" it.
For a picture of my radio & more info, go to this page and click on SILVER MARSHALL - thanks - Stan, WA2BAH

Subject: FA: 1928 SILVER-MARSHALL "FOUR" - last 2 days

I wonder if the author was familiar with the Leutz "Shortwave Unit" - a complete regenerative receiver using plug in coils and a type 222 tube circa 1927 but, alas, far less common than the Silver Marshall Round-the-World Four.

From: acomarow@aol.com (AComarow)
Subject: FS: Jackson triggered scope

5-inch oscilloscope, Jackson model CMO-3, I'm guessing ca early '60s because of the three-wire cord. Extremely clean, with three probes (straight though with clip leads, demodulator, and low-cap), two of them in the original boxes. No manual. Nice bright trace, triggers on internal calibration and external 60Hz. Snazzy chrome bezel if you like stylish touches.

It ain't state of the art, but it sure is pretty...and it works to the extent I tried it out. Jackson was a solid name in test gear, as oldtimers on this list know.

Prefer local pickup in Washington DC area but will consider shipping.

$50 plus shipping OBO.

From: arnoldg@sf.telia.no (DEMOSTENES A. Goks&#65533;yr)
Subject: FS: Vintage Telefunken RS 235 triodes

Hi,

I came across these wonderful Telefunken RS 235 triodes. They are quite similar to the better knows RS 237 but they have another socket and a topcap.

I have two pcs and this is probably your last chance to get such
valves. I have never seen these before, and they seem to be even more
rare than the RS 237.
I will take a picture of them tonight so I can send a pic with e-mail
to those who are interested.

Some technical data: Vf 10V/3.5A Va 1000V S=4.0mA/V u=12
Pd=100W

Serious offers will be considered.

Best regards,

Arnold Goksyr

From: "Norman S. Braithwaite" <normbns@awwwsome.com>
Subject: Info on Clapp-Eastham RADAK R4/A4 needed

Clapp Eastham R4 was offered at $25.00 as a complete regenerative receiver in 1923. The 1914 date is the Armstrong regenerative circuit license patent date. The A4 was offered at $25.00 as a matching two stage audio amplifier. Source: Radio Manufacturers of the 1920s, Volume 1, Alan Douglas, Author.

These units are very scarce and highly collectable today.

Subject: Where to get Standard Radio repaired??

In the merchant marine people buy Standard radios because they repair or
replace them very cheaply. Maybe they have such a deal on your radio.

Subject: WTB:Parts for Hallicrafters S 22

Hi

I am restoring a Hallicrafters S 22R, the marine version of the S 22 circa 41

Require silver metal bands which are attached to each end of the cabinet, which wrap around the front corners.

Also interested in other parts, including dials and dial covers.

See picture at:

http://www.intertrek.com/good/hall22.jpg

Many thanks

From: ekugrad@mindspring.com (David Robbins)
Subject: WTT Collins 75A3

I have a very nice condition Collins 75A3 receiver SN 1206, that I would like to trade. It is complete and in working order. The front panel and cabinet are in excellent condition with no dings or dents. The lettering on the front panel is mint, as are both dials. Chassis is dusty, and could use a cleaning. Some of the controls are in need of a shot of de-oxit, (a little scratchy) but the radio is working. I got it and planned to clean it up and use it, but before I got around to it, I acquired a 75A4.

The radio comes with the stock filter, and a Homebrew plug-in NBFM adaptor. The only mod I know of is an added PL-258 plug on the back. Not sure what it is for (muting circuit?) I have a copy (not original) of the manual.

Not really interested in selling. Would like to trade for another radio or radios. What do you have to trade? Collins, Drake,

Hallicrafters, Johnson, Hammarlund, Ten Tec, Kenwood, Yaesu. I'm just looking for something new to play with.

See the radio at
<http://www.mindspring.com/~ekugrad/images/MY_75A3.jpg>

I am located near Raleigh, NC

Thanks and 73
David

Subject: 1935? HRO

HI everyone .This is my first post to any group so please forgive me of any mistakes.
I am the very lucky new owner of an HRO s/n D52
I cant pay what it is worth but the person selling it didn't know its value so I got it.
my question is.....
1)what is it looking for in a speaker/field coil values?
2) none of the knobs have any labels-what is the layout of the knobs? rf gain- audio gain-bfo ,I do know which is the crystal filter and the tune knobs Hi Hi . please any help on bringing it back to life will be received with open arms. Thanks,Lynn AA1OH

I found it in Fathauer's book. It must be a misprinting. He doesn't
list CV 4082 in the CV... list in the end of the book, and I have not
found this number in any of the other books I have either.
If there is a valve labeled CV 4082 it is strange. Can anyone else
help us here?

Data on A2426: Vf 6.3V/1.3A Va 150V Vg2 150V Ia 50mA -Vg1 13.5V
Ig2 5.0mA S 8.0mA/V Wa 15W
Brans VadeMecum list this valve as a pulse tetrode with a Vpeak of 8KV

Best regards,

You got that right! Curiously, English lacks a unique verb tense for
something that is done continuously. We have past, present, and future
tense but must use the present tense when we really want a continuous
tense. Some Black accents have corrected that by prefacing the verb with
"be" as in "I hear her dad is after him" "Yup, he be running".
Naturally, the more conservative deem this a flaw and miss much humor
thereby.

Dean,

You are so right.
This is just one more example of the computer-generation "dumbing
down." Unfortunately the use of lower case letters for proper nouns is
beginning to creep into areas where the authors should know
better...corporate advertising and the media.
Just like the FCC/ARRL Ham License Give-Away Bonanza, expect to
continue seeing lowered standards for those who lack initiative.
No wonder Johnny can't write....or add....or think anymore. Bill
Bennett is correct, no one is outraged anymore about anything and
performance standards are under attack by not only schools, FCC and media
but also, sadly, the people.

I've bought several of those connectors in recent years from Newark
Electronics. They're in the catalog, and you just have to find them. Sorry I
can't remember the model number--but I think they may still be made by
Amphenol.

No, not Amphenol. A company called Wire Products or WPI took
over this item. This is the 80 Series Microphone connector.
It is on page 403 of my Newark catalog #115.

good luck,
Phil

everyone wants something mint and clean and cheap. What do you think one that meets the mint and clean should be if its to be cheap? The Gov. paid about 40,000 for one that was "MINT and CLEAN" so do you think mine that meets both criteria with spares for 500.00 is cheap enough?

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Anyone know how much current is in the relay-keying path of a Heathkit SB-1000 amplifier? I used to have an SB-200 that I unknowingly hooked into my Icom-735 with relay-blowing results. I don't want to repeat that! I know the SB-1000 coil voltage is 12 volts, and I suppose I -could- just insert an ammeter in the line and measure it- but if someone has the "by-the-book" specs then I would know where to go from this point.

Thanks, -Web Williams in Myrtle Beach, SC

These goodies can interest me ! Just tell me a reasonnable price :-) !
How can I use them ? As a 211 (the caracteristics you give are quite similar)
If you'll make a picture, can you send it ?

Thanks in advance..

Jerome.

I have a Tempo One that has been taking up space in my basement. The rig works but does need some alignment. It is the Silver face model. covers 80-10 including 11meters. It was the first HF rig I owned and will make a nice starter rig just needs some TLC. I will sell it for $125.00 or best offer or maybe trade for a decent 2meter or dualband HT.
Email to rellison@twcny.rr.com if intrested.

Yes sometimes the word "RARE" is over used but in many cases when a unit
it truely "RARE" it is not used. So if you are looking of r RARE items
to add to your collection do not do a search with the work RARE in it.

This coming Sunday....

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday June 18th 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23-W1BOS/R and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

A socially inept, gay person of Southeast Asian origin? All this hostility over some sloppy proofreading, really! I will answer the original question (what kind of nerd would wear his callsign on his hat?): the same kind who wears a belt *and* rainbow suspenders, an elastic strap to keep his galsses on his head, and two earphones (from different HTs), usually seen stalking the aisles of hamfests for a $50 SX-88, or holding up traffic at a green light while he changes taps on his homebrew bugcatcher.

http://www.edebris.com/Hallicrafters/
I didn't dust 'em off.
All have been off air for 10 years except SX101A which I listened to
about 3 years ago. Have original manuals for all except maybe the 101A
Will have to look for this one. Find a period rack
and build yourself a rare SR1000 and sell it on the auction for $10k :-)
Radios are unmolested with the exception of the HT-37 which has some
minor mods for RTTY. Want to sell as a lot only. Shipping issues.
I can ship on a pallet by motor freight for approx $150 to $250 in
continental USA. or come pick 'em up in Atlanta. Did not have energy to
pull SX101A off the shelf. Radios look better in parson than in photos.
$1K will buy. Might have a period microphone to throw in as well.

Here is your chance to be the only kid on your planet with a Watkins Johnson 9049 monitoring system. I wish I could keep this but it but spouse, has been offered a job in Honolulu. and the $/sq foot for housing prohibits much in the way of a BA collection.

This is one of three systems built. The other two went to some govt monitoring post in europe. No one would tell me more.

See photos at:
http://www.edebris.com/WJ-9049/

This system is built with DEC LSI computers running WJ's finest 1978 vintage solid state analog radio gear. If you have any questions about the units, I'll try to answer. The WJ factory seals are intact. None of this stuff has been molested. I doubt it's been powered up since 1980. I have no manuals but do have some marketing material. Manuals for the core radios should be relatively easy to come by. The DEC LSI stuff is easy to find, software development stuff is easy to find. The DRD unit runs multiple fixed frequency color displays. Nothing special about them and I can throw in some NOS displays from about the same period as the system.

$21k includes shipping by motor freight within the continental USA. Or, come pick it up and I'll knock off $1.5K

Just wondered if anyone has an HE-45 or HE-45A 6 meter transceiver that they would like to sell. I know this rig is not really worth much on today's market, but I used to have one when I was first on the air on 6 meters and would like to add one of these to my "Original Shack" Collection. It would be great if it was in very nice condition both electrically and foremost (because the rest can be fixed) excellent cosmetic shape. There was also a companion VFO for it too, but I forgot the model number.
73,
Jack

Hi All,
Not to get off subject here, just a survey-type question.

Ever have this conversation??? S = spouse B = boatanchor collector

S: "What is all of this junk/crap/stuff down here???
B: " What do you mean? This is all GOOD stuff!!!"
S: "Oh please, this is getting ridiculous!! This junk is taking up room and
let's not evn talk about how much you have spent on it!"
B: "But it is great stuff!! It works better than the new junk being produced,
sounds better and keeps the room warm on cold nights!!"
S: "I can't even get through here with the wash to go outside and hang it up!!!
I swear, if one more of these THINGS shows up, I will scream....."
B: (knowing that there are 2 more on the way and now scrambling on figuring out
where to hide them).. " Yes dear....."

I don't know about you, but I have taken to hiding them out in the garage...
(no-mans-land)

rgds,
Mark S.

Hi Rod and greetings from SE North Carolina. You've actually come
across a desirable tube (in my opinion), as compared to the 811-A.
Don't get me wrong, I like the 811-A just FB. The 811 is a bit more
difficult to acquire. Several older transmitters, such as the Eldico TX-
1 used them in the modulator section. They biased at -9 volts whereas
the 811-A biases at 0 volts. Please don't use them in your 30L-
1...they'll work somewhat but not like a "A" would. The biasing is the
only difference that I know of. Some AM'er or audio builder would
really appreciate this tube(s). 73, JP

volts class B push pull for the 811-A. For class AB1, the 811-A is
still 0 volts...no specs for AB1 on the 811. Whew! I hope I made it
before getting slammed. I bet the grammer and spelling doesn't cut the
mustard though!

The main differences between 811s and 811-As is the plate dissipation and plate current ratings. 811s are rated at 55 watts plate dissipation and 150 mA maximum plate current, while 811-As are rated at 65 watts plate dissipation and 175 mA maximum plate current. In addition, 811s have very slightly lower interelectrode capacitances.

They can be easily told apart by looking at the plate structure. 811-As have fins on the plate, while 811s are plain.

In almost all applications, 811-As will sub for 811s - but the reverse is usually not true without modification.

The 811-A is OK with horizontal operation if pins 1 and 4 are in the vertical plane.

Let me guess - 30L1?

In the RSGB Publication "Service Valve and Semiconductor Equivalents"
Published in 1967 the A2426 manufactured by the M-O Valve Company is listed
as the equivalent of the CV4082. Only other information is that it is a
tetrode.

The Radio, Television, Industrial Tube, Diode and Transistor Equivalents
manual by BIB. Babani first published in 1960 lists the VX3518 as the CV4082
equivalent.

From: jbr101@my-deja.com
Subject: FA: Keypad for Collins KWM-380

I have a keypad for the Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=349728588

and the description is

This is a mint-condition keypad for the Collins KWM-380 HF
transceiver.When used with the interface board in your radio, enables
direct frequency entry from the keypad, storage of displayed frequency
into one of 10 memories, recall of frequencies stored in memory, and
"stepping through the frequencies stored in memory. The stepping feature
is especially nice for contesting. This is a heavy metal brute, weighs

around two pounds and is mounted on a rubber slab so it stays put on
your operating table. Comes with documentation, cable and connector
all ready to plug into your '380 and go. This is in like-new condition,
owned by a non-smoker who rarely used it. I honestly don't think you
could tell it from new. The last time I saw a KWM-380 keypad
advertised retail it was close to $300, starting bid is about 1/6 of
that; I don't even know if they're still available anywhere else but
right here on good ol' eBay.

Closes 6/11/00.

Thank-you

My guess would be it is a fixed audio level output that would be used
for tape recording. Then it doesn't matter what the volume control
level is set at.

I have a 2B also. I got my first one in 1964, used it with a DX-20.

Date: Fri, 09 Jun 2000 13:20:19 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: FS/FT: Atlas 210X HF mobile rig

For sale or trade:

Atlas 210X solid-state HF mobile rig. Very compact size
(only weighs 7 pounds). Covers 80/40/20/15/10 meters, SSB
and CW. Analog dial. This is a late 1970s rig that is
100% solid-state and runs on 13.8 VDC at up to 20 Amps.
May need some work. Transmitter works fine on all bands;

power output is 100W plus on 80m through 20m, about 80W on
15m, and about 50W on 10m, and I'm told this is correct for
a 210X. Receiver sensitivity doesn't appear to be what it
should on 80m and on 20m thru 10m, but 40m is strong. Rig
is clean, with minor usage wear on the front panel and the
cabinet, but not serious at all. It's a good looking set.
Original hand mic (Shure Bros. 404) is included and is in
great shape. A Cerlox-bound reprint manual, enlarged to
8.5" x 11", is included. This is a complete manual that
includes operating instructions, service information, info
on Atlas accessories, also contains some ads, spec sheets,
and so on. I bought the rig with the intention of using
it mobile, but I got a great deal on a used Alinco DX-70,
so this one went on a shelf. Now, it's gotta go. I have
$170 invested in it, and I'd like to get that back out of
it if possible. In trade, I'd be interested in trading
toward a Drake T-4XC transmitter with AC-4 p/s (of course,
I'll make up the difference in cash). Interested?

Pardon? Never heard of the present progressive tense, as in "he is
running"? Sorry, Biker, back to school for you.

Please don't blame my teachers for poor English. They were too busy with
diversity programs, liberal agendas, social programs, Union activities, and
working to insure hefty salary increases coupled with excellent retirement
benefits. Unfortunately, with the short school day and abbreviated school
year, the teachers just didn't have the time to teach the three R's.

Messrs. Kennedy, "BMF" and Carl,

Thank you. We now have a little insight into the calibre of "new
operator" we can expect.
Yes sir, Herr Kennedy, sir. I will certainly work on my compositional
skills and sense of humor.
Since you obviously want to take off the gloves, why don't you have a
degree in something less sissified than "fine arts?"
BMF and Carl, your comments were just plain stupid and "the life" that
you say I need to get does not allow me enough time to respond to bonehead
comments. I guess in your pathetic little world having an opinion
constitutes one's need to "get a life."
Geez...

VERN

You must be that hick 'Vern' from TV, right?

My degree is even "sissy-er(?)" than you think. It's in Stage Lighting Design & Technical Direction. Should that be insufficiently butch for you I have several others: A lesser degree in Electrical Engineering (power) and an even lesser one (AA) in Architectural Engineering.. Sorry I'm not manly enough for you, Vern. I know you like them rough. As a great coincidence, I'm also from San Francisco...say something....go ahead you cracker.

By the way...what a totally ladylike email address you have. Love it!! Please check my spelling again Vern. It's important to me to please you.

In another NG, I was described as an "IRA loving " (true) "guiness swilling paddy" (unfortunately not so true)...So you are, in comparison, quite a pussy. How's that for appropriate usage.

skennedy
sissy guiness swilling paddy who actually went to college.

"Kiss my ass. I bought a boat. I'm goin' out to sea." TONTO

SO, For all you sissies out there, particularly ham sissies. Please let this this throw-back know what you think of his homophobia. Nor do you have to be a sissy. Just a person who thinks others shouldn't be attacked as being "sissies" or perhaps "nerds" or "geeks" or "kikes" or "niggers". I personally am going to look into the FCC reg's in regard to his actions, while representing himself as a ham. The pigs data is:

Subject: WIDESPREAD INCOMPETENCE AT BELL ATLANTIC

Friday, June 9, 2000
-
It would seem that in every category of service BA offers, there are a whole lot of unhappy customers. With the possible exception of voice-only service, BA has littered the Internet with consumer

horror stories.
-
Let's take DSL for example... You need only spend a little time
in COMP.DCOM.XDSL to learn that this is a service that BA is just
not in a position to support and should probably not be offering at all.
Network availability is abysmal (less than 50% for some people); as
evidenced by last weeks' outage, where major parts of the mid-Atlantic and
northeast were without DSL service for 72 hours and longer.
Multiple subscribers report calling into tech support, only to
be told that there were no reported problems with the network.
Could anything be more frustrating?
-
It also appears that BA is not at all committed to staffing their
tech support and customer service lines with properly trained,
articulate, informed and technically capable individuals.
It's as though these people were simply grabbed off the street and
required to man the helpdesk phones - like conscripts into some
rag-tag militia.
-
Perhaps the US Government should take a look at Bell Atlantic in
much the same way it's currently looking at Microsoft, with a similar
remedy in mind.
-

Subject: WTB: ART 13 parts

Hi there.

I am restoring a couple of ART-13 transmitters and I need some parts. I am looking for the connectors that hook up to the transmitter to supply power and remote control etc.

I also need some of the knobs and meters.

I need the manuals and freq chart book too.

If anyone has a power supply built up for one of these things that they want to part with, let me know.

I will buy basket case ART-13 for parts in lower Michigan. I will pick up.

Thanks!

From: Lamb <k7fm@teleport.com>
Message-ID: <sJ425.1229$ee.74824@nntp2.onemain.com>
Source record: 65218

I built a 3 story "barn" in which to store my toys. Once every year or so I make a token sale of something I never should have purchased in the first place and give her the money as rent.

As stated earlier, the secret is having so many boatanchors that one more cannot be detected.

It also helps if every year or so you can find just the right part to fix something of hers. Then, you can honestly state that you need all of this stuff to be able to fix her things. I found just the right ball bearing race 10 years ago to fix her vacuum cleaner on a weekend and still milk that for all I can.

Remember all of the positive things that happen because of your large collection of junk. Since they are infrequent, write them down and review them occasionally. Women are able to remember those things you do not do well for decades.

Talk her into getting a codeless tech ham license. Then you can justify those boatanchors to help you talk to her. Then buy her a handheld with all the bells and whistles that she hates. Finally, get her a simple single channel rig for $25 and you have just acquired a $500 handheld for yourself. And you can put a mobile rig in every car just for her to be able to find you.

As much as you hate television set repair, let your wife think that all your equipment is necessary to maintain her television. When it breaks, take it out to your shop and tell her you are going to work on it. After she is asleep, load it into the car and take it down to the television shop. When it is fixed, sneak it back to your shop and proudly carry it from your shop to television room and install it. Pay for the television out of your slush fund. Then, write this achievement down ot the list mentioned earlier.

Once a year try to buy something that is simply a good buy for the purpose of selling on e-Bay. Then sell it for a profit. Make sure your wife knows and give her the profit (be sure to deduct the cost). Write this down on your list. Remember, everything is an investment for the big estate sale.

Remind your spouse that your buddies spend their money on mistresses and golf. Your boatanchor collection does not allow you the time nor money for either of those vices and you are determined to stay happily married because you do not have the time, energy or inclination to haul all of the boatanchors away - and that the only way they will leave is at an estate sale.

Once every few years, use your ham radio to arrange a vacation at some remote part of the world. Leave the ham gear home and have a romantic

vacation. When you get back, put that on your list. It is better if you use a boatanchor to arrange the vacation.

As a result of the above practice, I can receive 3 or 4 boxes of boatanchors on the same day with not more than a "more stuff for you came today" or " don't you already have enough stuff?" Give your wife a kiss, tell her you love her, and recite the list you have now memorized.

Colin k7FM

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

From: "Mike Srock"
Subject: ART-13 autotune fix help

Help with ART-13 autotune needed.

The autotune on my ART-13 has a mechanical problem I hope
someone can help me with.

There is a screw with a floating nut on the right front side of the
transmitter
that runs between two finger type switches. This controls the autotune
cycle and reverses the motor. The metal insert in the floating nut that
runs back and forth down the screw is slipping inside of the wood-like
housing that rides on a shaft to keep it from spinning free. Anyway, the
autotune ran for quite a while before I realized the slipping was happening
and
the floating nut was not moving. I need to know how to set the autotune
so that it is operating correctly and reversing direction at the correct
point again.

Does anyone have a copy of the manual that has autotune maint instructions?
Is there an easy way to know where to set the autotune?

Thanks for any help!

Email direct please!

Subject: Callsign hats

A socially inept, gay person of Southeast Asian origin? All this
hostility over some sloppy proofreading, really! I will answer the

original question (what kind of nerd would wear his callsign on his hat?): the same kind who wears a belt *and* rainbow suspenders, an elastic strap to keep his galsses on his head, and two earphones (from different HTs), usually seen stalking the aisles of hamfests for a $50 SX-88, or holding up traffic at a green light while he changes taps on his homebrew bugcatcher.

From: kr4wm@mindspring.com (Web Williams)
Subject: Heathkit SB-1000 info needed

Anyone know how much current is in the relay-keying path of a Heathkit SB-1000 amplifier? I used to have an SB-200 that I unknowingly hooked into my Icom-735 with relay-blowing results. I don't want to repeat that! I know the SB-1000 coil voltage is 12 volts, and I suppose I -could- just insert an ammeter in the line and measure it- but if someone has the "by-the-book" specs then I would know where to go from this point.

Thanks, -Web Williams in Myrtle Beach, SC

Date: Wed, 14 Jun 2000 18:49:27 -0500
From: Matt Erickson
Subject: Heathkit SB-1000 info needed

Just put a ameter across the relay jack, the ameter is a "short", so the amp will key up, and you can get your current reading. It is probly in the area of 500ma.

From: WA0KDS
Subject: Hurry over to ebay.....

Yes sometimes the word "RARE" is over used but in many cases when a unit
it truely "RARE" it is not used. So if you are looking of r RARE items

to add to your collection do not do a search with the work RARE in it.

And it will go down down down, as the novelty passes. It's just a cycle,
and collectibles follow it more closely than most other markets. Give it
another 6-8 years, and watch the prices on old rigs (except a few real
rarities, like the SX-88, HRO-500, some Collins stuff) come back down.

Hi All,
Not to get off subject here, just a survey-type question.

Ever have this conversation??? S = spouse B = boatanchor collector

S: "What is all of this junk/crap/stuff down here???
B: " What do you mean? This is all GOOD stuff!!!"
S: "Oh please, this is getting ridiculous!! This junk is taking up room and
let's not evn talk about how much you have spent on it!"
B: "But it is great stuff!! It works better than the new junk being produced,
sounds better and keeps the room warm on cold nights!!"
S: "I can't even get through here with the wash to go outside and hang it up!!!
I swear, if one more of these THINGS shows up, I will scream....."
B: (knowing that there are 2 more on the way and now scrambling on figuring out
where to hide them).. " Yes dear....."

I don't know about you, but I have taken to hiding them out in the garage...

LOL Yep wore for word !
You forgot "What an I going to do with all this sh*t when you get
electrocuted"
Like in the other post, "you need more stuff"

Tell her "Do not worry I will be cleaning up to make room for the
helicopter".
or, "I will have enough stuff when you come home and a see the helicopter on
the roof"

From: "Rick Ellison"
Subject: Tempo One

I have a Tempo One that has been taking up space in my basement. The rig
works but does need some alignment. It is the Silver face model. covers
80-10 including 11meters. It was the first HF rig I owned and will make a
nice starter rig just needs some TLC. I will sell it for $125.00 or best
offer or maybe trade for a decent 2meter or dualband HT.
Email to rellison@twcny.rr.com if intrested.

everyone wants something mint and clean and cheap. What do you think one that
meets the mint and clean should be if its to be cheap? The Gov. paid about
40,000 for one that was "MINT and CLEAN" so do you think mine that meets both
criteria with spares for 500.00 is cheap enough?

This conversation never happened. Women are supposed to be submissive to men. Says so in the bible. Boat anchors are good for you. Therefore, boat anchors are good for your family. You need an attitude adjustment! Long live your filaments.

> Wtd: R1051B - G, any model but must be mint, clean, & cheap

The R-1051B I received from Fair Radio Sales last week is pretty clean.
It was about $400 delivered. Add about $50 for a manual (and you
DO want the manual).

My radio has been serviced (as they all have) and the service guys don't

quite do the same sort of solder job that the factory did, but
everything
is functional (except the dial lamps are burned out).

I replaced the mode switch knob because the one that was on the set was
cracked and had been super glued, and cracked again.

I am starting to look at modifications to the set now. First, the freq.
setting
knobs, especially 100, 10 and 1 kcs knobs are hard to rotate so I will
try
reducing the spring tension on the detent rollers, or maybe even remove
the
detents completely. I will also be opening the modules to check the
switches
to see if they can rotate 360 degrees without something breaking. If
so, I will
take the stops out of the tuning knobs so they can be rotated 360
degrees.
These two changes should make tuning MUCH easier.

One of the two dial lamps are nearly impossible to change, and even if
you
take the radio apart, finding replacement lamps is expensive. I will
probably
install some LEDs in place of the dial lamps, but it's a low priority
bacause
you can see the digits just fine without the lamps anyway.

I've opened a couple of the modules to have a look-see. They are
absolutely
beautiful. When you get a radio, pull the cover off the front-end
module
(the one with the tubes). You'll quickly see why the military spent so
much
on these radios.

If you find a cheap source of radios/modules, let me know!

Somehow I ended-up with a 32S3 for sale in Paris .
It is a wing emblem ,the front panel is very good looking ,all the electronics
under the chassi is like new, all the resistors colors are still bright ,the
top of the chassi needs cleaning , never been used very much ,never been
cannibalized .and I did a complete realignment last year,I remember the
Balanced Modulator carrier rejection is better than average .
It is for sale in Paris to the best offer until June 24 or 25 / 2000

From: Bob Weiss <bweiss@carroll.com>
Message-ID: <394AF4EB.E19E184C@carroll.com>
Source record: 65099

Graphite anodes have a higher heat capacity, and resist damage from temporary overloads better than metal would. The graphite is often treated with other materials (zirconium) to act as a "getter" to absorb stray gas molecules. Graphite also tends to be more dimensionally stable than metal when operated at the red-hot temperatures common in internal-anode transmitting tubes. Metal anodes tend to melt or warp if severely overheated.

Hi Fellas;
I have for SALE:
Heathkit HW-5400 transceiver(Brown Series) all solid state, 80 thru 10 mtrs w/warcs, plus the matching power supply and cables, has digital clock on the fave es speaker within.
I DO NOT have the manuals and I am not a technician, so I cannot repair it. It came from an estate. It is in very nice condition except there are scratches along both sides of each unit, seems like they were slide against each other causing the cabinet screws to deface the cabinets(covers)
Heres the Story: The power supply clock lights up but when the rig is turned on, there is a clicking sound coming from the back of the HW-5400, I think its the main relay, why its clicking is beyond me!
Price is $200 plus UPS from 11758
Thanks es 73....Rich WA2RQY (1961)

I used radio shack bulbs and they work fine and have been in there for about 200hours. Use real long needle nose pliers and spend a little time and they go in. Put some coax seal around them so they stick in place and are easy to change again. No panel pulling at all. Set up the wires so you have a bus bar somewhere behind the panel for the next time you do it...have fun...

I guess I'm lucky with regards to my wife's tolerance of my ham radio addiction. As long as I keep the gear either in my hamshack or neatly stored in the garage, and keep it out of the rest of the house, she says nothing about it at all. Those limitations also keep me from accumulating too much gear at any given time (which, as you know, is WAY too easy to do!).

Hello, go to a well-stocked auto supply store, and ask the clerk to show you where the plastic polish is for motorcycle fairings (windshields) Use it, and it should clean up good...

I used toothpaste once to do the lenses on my 1969 Camaro...they came out scratch-free and new looking..'.Crest Whitening' is what I used, with a terrycloth towel...after you get the scratches out, polish it with a bit of non-abrasive car wax.

Subject: Cleaning dial plastic cover

I just purchased a very nice National NC-46 receiver. Everything cleaned up very nicely. The only thing that I need help on is the plastic clear dial "glass". It is 1/8" clear plastic with a lot of scatches. Is there any way to polish these scratches out or am I just better off getting a new one made from Plexiglass or even one cut from glass?

Thanks for the bandwidth.

Subject: FA: JOHNSON VFO MODEL 122 LAST DAY!!

AS LISTED ON E-BAY LAST DAY!!!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=351481988

Got an old "Boat Anchor" rig you want to get on the air? Well, here is
the perfect "Vintage" way to go. This
Johnson VFO was originaly mated to an old Viking 1 that I gave
away to a friend about a year ago. It was going
to be my "Boat Anchor" rebuilding project as the rig needed paint
and a bit of rework to return it to is original
bueaty. The VFO stayed behind as he didn't need it. So, I think

it will work fine as it looks ok inside. Fairly clean
for its age. Shows it age on the outside but not bad considering.
The dial reads very well and the tuning is still fairly
smooth. A few scrapes and scuff marks but that just means it was
getting used. Heck, its about my age and I am
not shure who is in better shape. ;>} It ain't a museam piece,
OK, but I don't expect to get museam piece prices
either. As with all used equipment, it is sold "as is". Buyer
pays actual shipping costs only from the Peoria Arizona
area. Use USPS. Will double box and pack. Payment in US Funds
only. Cash, (not recomended but ok), USPS
Money Order, certified check, original check, or credit cards via
PayPal are all ok. No personal checks please. It
only slows down the whole process as I would have to wait for it
to clear so, I DON'T DO PERSONAL
CHECKS. No out of country orders.

From: jamesnf@aol.com (Jamesnf)
Subject: Fixing up a Drake 2-B

The shielded cable from the first audio amp to the rear is to input tone for cw
monitoring. The 2C incorporated this right from the factory, but in the 2B you
had to do it yourself if you wanted to inject cw monitoring tone (like from the
2NT xmtr) into the 2B audio to feed your headphones.

Date: Sun, 11 Jun 2000 14:03:56 GMT
From: n2cqr@erols.com (Bill Meara)
Subject: Fixing up a Drake 2-B

Ah ha! That sounds like the answer. Was this cw monitoring tone a
special feature of the 2-NT? I 've never heard of such a feature on
other rigs of the era.

I monitor CW with the 2-B by putting it in "Standby" mode and putting
some resistance across the mute line.

Thanks, Bill N2CQR

Subject: FS: Collins 208U-3 2-30Mhz, 3KW RF Amplifier

Collins 208U-3 2-30Mhz RF Amplifier 3 KW in
good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce 3 KW PEP or average power with
only 0.2 watts of input.

It is automatically tuned with a servo system that takes about 10
seconds to tune-up.

Primary power input is 200-250VAC, 3Ph, 47-60Hz.

Net weight is 975 Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers
would make a great addition to your station.

I am offering this unit FOB Somis, CA) as follows:
untested less the 4CX3000A Tube at $3,000. unpacked or

with Econco factory Guaranteed 4CX3000A tubes at $4,000

Crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site
Collins data sheets are available.

If you are interested and need more info please contact me.

Subject: FS: Sunair GSL-1900A 1KW PEP or CW RF Amplifiers

Sunair GSL-1900A 1KW PEP or Average power RF Amplifiers covers 1.6 to
30MHz.
Uses a single 4CX1500B and require a nominal 40 watts of drive.
Automatically tuned in
a few seconds.

The power supply uses 115/230V/1PH/60Hz.
These consist of LPA1900A RF Amplifier and PS-1900A Power supply.
Total net weight 190 Lb.

Removed from military service in good condition with a set of plugs and
a
copy of the manual at $1,500. FOB Somis. Three units in left in stock.

I can also supply the GSE-924 Exciter 100W with for use with the above
at $1,000 in good condition.
Only one available. Net Wt. 55Lb.

The GSL-1900A with GSE-924 as a pair for $2,250. Only one exciter left.

This is commercial/military quality gear for those that like to tinker
with military equipment.

I can send supply the complete specifications and photos upon request.

There is a photo of this on our web site.

From: <windbrkr@erols.com>
Subject: Maryland Hamfest - 18 June

The Frederick Amateur Radio Club (FARC) presents the annual
Father's Day Hamfest on Sunday, June 18, 2000
from 8:00am to 3:00pm, rain or shine.
(Access for tailgaters opens at 6:00am)

It's at the Frederick County Fairgrounds on East Patrick Street in
historic Frederick, Maryland. Easy access from I-70, I-270, US-15, US-
40, etc. Plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating,
Indoor Commercial Vendors, VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00 donation.
Tailgating spaces are $5.00 each + general admission
Indoor tables are $10.00 each before June 10th, $15.00 after.

One of the largest and most popular hamfests in the
Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net or direct to me

Thanks & 73,
Bob K9CMR

726. Re: Spouses V. BA's

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-16 00:00:00 UTC
From: jarodenbarger@stew-01.cea.purdue.EDU
Message-ID: <iss.58ef.394a2c9a.afcf4.1@scribe.cc.purdue.edu>
Source record: 65188

My spouse keeps asking when I am going to bring the boatanchor
(SX-110) downstairs and hook it up to the stereo system so she
can listen to shortwave during the day....

Scott W4PA

Oh, to have a spouse like that! My second wife regarded any piece
of gear that didn't get HBO or chat rooms TOTALLY useless <of
course, not having a biological 56K modem in my backside, guess
where that left me...:)> I used to have a line running from the ham
shack to the family room going from the patch bay to the "AUX"
input of the stereo. *I* liked it, anyway.....

John WB9OFG

Subject: FS: Collins 32S3 located in Paris France

Somehow I ended-up with a 32S3 for sale in Paris .
It is a wing emblem ,the front panel is very good looking ,all the electronics
under the chassi is like new, all the resistors colors are still bright ,the
top of the chassi needs cleaning , never been used very much ,never been
cannibalized .and I did a complete realignment last year,I remember the
Balanced Modulator carrier rejection is better than average .
It is for sale in Paris to the best offer until June 24 or 25 / 2000

Subject: fs: HEATHKIT HW-5400 W/Supply, Tech Spec $200+UPS

Hi Fellas;
I have for SALE:
Heathkit HW-5400 transceiver(Brown Series) all solid state, 80 thru 10 mtrs

w/warcs, plus the matching power supply and cables, has digital clock on the fave es speaker within.
I DO NOT have the manuals and I am not a technician, so I cannot repair it. It came from an estate. It is in very nice condition except there are scratches along both sides of each unit, seems like they were slide against each other causing the cabinet screws to deface the cabinets(covers)
Heres the Story: The power supply clock lights up but when the rig is turned on, there is a clicking sound coming from the back of the HW-5400, I think its the main relay, why its clicking is beyond me!
Price is $200 plus UPS from 11758
Thanks es 73....Rich WA2RQY (1961)

Hello,
Anyone out there know where I would find replacement
parts for the above mentioned rig.
Looking for knobs, 7 segment LED's for the freq. read-out,
mic, and other electronic components specific to this radio.

Any info will be appreciated.

From: "Lamb" <k7fm@teleport.com>
Subject: Spouses vs. Boatanchors.....

I built a 3 story "barn" in which to store my toys. Once every year or so I
make a token sale of something I never should have purchased in the first
place and give her the money as rent.

As stated earlier, the secret is having so many boatanchors that one more
cannot be detected.

It also helps if every year or so you can find just the right part to fix
something of hers. Then, you can honestly state that you need all of this
stuff to be able to fix her things. I found just the right ball bearing
race 10 years ago to fix her vacuum cleaner on a weekend and still milk that
for all I can.

Remember all of the positive things that happen because of your large
collection of junk. Since they are infrequent, write them down and review
them occasionally. Women are able to remember those things you do not do
well for decades.

Talk her into getting a codeless tech ham license. Then you can justify
those boatanchors to help you talk to her. Then buy her a handheld with

all the bells and whistles that she hates. Finally, get her a simple single channel rig for $25 and you have just acquired a $500 handheld for yourself. And you can put a mobile rig in every car just for her to be able to find you.

As much as you hate television set repair, let your wife think that all your equipment is necessary to maintain her television. When it breaks, take it out to your shop and tell her you are going to work on it. After she is asleep, load it into the car and take it down to the television shop. When it is fixed, sneak it back to your shop and proudly carry it from your shop to television room and install it. Pay for the television out of your slush fund. Then, write this achievement down ot the list mentioned earlier.

Once a year try to buy something that is simply a good buy for the purpose of selling on e-Bay. Then sell it for a profit. Make sure your wife knows and give her the profit (be sure to deduct the cost). Write this down on your list. Remember, everything is an investment for the big estate sale.

Remind your spouse that your buddies spend their money on mistresses and golf. Your boatanchor collection does not allow you the time nor money for either of those vices and you are determined to stay happily married because you do not have the time, energy or inclination to haul all of the boatanchors away - and that the only way they will leave is at an estate sale.

Once every few years, use your ham radio to arrange a vacation at some remote part of the world. Leave the ham gear home and have a romantic vacation. When you get back, put that on your list. It is better if you use a boatanchor to arrange the vacation.

As a result of the above practice, I can receive 3 or 4 boxes of boatanchors on the same day with not more than a "more stuff for you came today" or " don't you already have enough stuff?" Give your wife a kiss, tell her you love her, and recite the list you have now memorized.

This conversation never happened. Women are supposed to be submissive to men. Says so in the bible. Boat anchors are good for you. Therefore, boat anchors are good for your family. You need an attitude adjustment! Long live your filaments.

Subject: WTB:Lafayette HE-45A

Just wondered if anyone has an HE-45 or HE-45A 6 meter transceiver that they would like to sell. I know this rig is not really worth much on today's market, but I used to have one when I was first on the air on 6 meters and would like to add one of these to my "Original Shack" Collection. It would be great if it was in very nice condition both electrically and foremost (because the rest can be fixed) excellent cosmetic shape. There was also a companion VFO for it too, but I forgot the model number.

Subject: Wtd: R1051B - G, any model but must be mint, clean, & cheap

> Wtd: R1051B - G, any model but must be mint, clean, & cheap

The R-1051B I received from Fair Radio Sales last week is pretty clean.
It was about $400 delivered. Add about $50 for a manual (and you
DO want the manual).

My radio has been serviced (as they all have) and the service guys don't

quite do the same sort of solder job that the factory did, but
everything
is functional (except the dial lamps are burned out).

I replaced the mode switch knob because the one that was on the set was
cracked and had been super glued, and cracked again.

I am starting to look at modifications to the set now. First, the freq.
setting
knobs, especially 100, 10 and 1 kcs knobs are hard to rotate so I will
try
reducing the spring tension on the detent rollers, or maybe even remove
the
detents completely. I will also be opening the modules to check the
switches
to see if they can rotate 360 degrees without something breaking. If
so, I will
take the stops out of the tuning knobs so they can be rotated 360
degrees.
These two changes should make tuning MUCH easier.

One of the two dial lamps are nearly impossible to change, and even if
you
take the radio apart, finding replacement lamps is expensive. I will
probably
install some LEDs in place of the dial lamps, but it's a low priority
bacause
you can see the digits just fine without the lamps anyway.

I've opened a couple of the modules to have a look-see. They are
absolutely
beautiful. When you get a radio, pull the cover off the front-end
module
(the one with the tubes). You'll quickly see why the military spent so
much
on these radios.

If you find a cheap source of radios/modules, let me know!

Subject: WTS: Hallicrafters SX101A, HT32B, HT33, HT37

Photos at
http://www.edebris.com/Hallicrafters/

I didn't dust 'em off.
All have been off air for 10 years except SX101A which I listened to
about 3 years ago. Have original manuals for all except maybe the 101A
Will have to look for this one. Find a period rack
and build yourself a rare SR1000 and sell it on the auction for $10k :-)
Radios are unmolested with the exception of the HT-37 which has some
minor mods for RTTY. Want to sell as a lot only. Shipping issues.
I can ship on a pallet by motor freight for approx $150 to $250 in
continental USA. or come pick 'em up in Atlanta. Did not have energy to
pull SX101A off the shelf. Radios look better in parson than in photos.
$1K will buy. Might have a period microphone to throw in as well.

Subject: WTS: Watkins Johnson 9049, WJ-9049, built for the Shah of Iran, 1 of 3 built, 1 of
1 known

Here is your chance to be the only kid on your planet with a Watkins
Johnson 9049 monitoring system. I wish I could keep this but it but
spouse, has been offered a job in Honolulu. and the $/sq foot for
housing prohibits much in the way of a BA collection.

This is one of three systems built. The other two went to some govt
monitoring post in europe. No one would tell me more.

See photos at:
http://www.edebris.com/WJ-9049/

This system is built with DEC LSI computers running WJ's finest 1978
vintage solid state analog radio gear. If you have any questions about
the units, I'll try to answer. The WJ factory seals are intact.
None of this stuff has been molested. I doubt it's been powered up
since 1980. I have no manuals but do have some marketing material.
Manuals for the core radios should be relatively easy to come by.
The DEC LSI stuff is easy to find, software development stuff is
easy to find. The DRD unit runs multiple fixed frequency color displays.
Nothing special about them and I can throw in some NOS displays from
about the same period as the system.

$21k includes shipping by motor freight within the continental USA.
Or, come pick it up and I'll knock off $1.5K

I have an ft-101ex I would like to sell or trade. The AM recieve is a little low, and the power on 10 meters and possibly some other bands is a little low but the ssb, and cw recieve is perfect, and I think a new driver, and maybe an alinement and the radio would be all set. I will considder trade with cash for a solid-state hf radio that might make a decent backup radio, or, if you make me an offer, more then likely if it isn't rediculas, I will considder it. I have with the radio, a sure 444 mic, very banged up, but works fine. Email me if interested at n1umj@mediaone.net

Take your own advice, and run like hell from all us nerdy, life-less geeks. There are lots of groups I dislike or disagree with, but I don't hang around with them telling them the particulars of my disapproval.

Want decent R-390A for a fall project.

Does not necessarily have to work well, but should play.

Do not want one that was stored outside.

Thanks
Tom

Subject: Spouses V. BA's

My spouse keeps asking when I am going to bring the boatanchor
(SX-110) downstairs and hook it up to the stereo system so she
can listen to shortwave during the day....

Scott W4PA

Oh, to have a spouse like that! My second wife regarded any piece
of gear that didn't get HBO or chat rooms TOTALLY useless I used to have a line running
from the ham
shack to the family room going from the patch bay to the "AUX"
input of the stereo. *I* liked it, anyway.....

John WB9OFG

Date: Fri, 16 Jun 2000 13:18:31 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Spouses vs. Boatanchors.......

I guess I'm lucky with regards to my wife's tolerance of my
ham radio addiction. As long as I keep the gear either in
my hamshack or neatly stored in the garage, and keep it out
of the rest of the house, she says nothing about it at all.
Those limitations also keep me from accumulating too much
gear at any given time (which, as you know, is WAY too easy
to do!).

73,
Dean, K5DH

From: Bob Weiss
Subject: Vacuum tubes?

Graphite anodes have a higher heat capacity, and resist damage from temporary
overloads better than metal would. The graphite is often treated with other
materials (zirconium) to act as a "getter" to absorb stray gas molecules.
Graphite also tends to be more dimensionally stable than metal when operated at
the red-hot temperatures common in internal-anode transmitting tubes. Metal
anodes tend to melt or warp if severely overheated.

Subject: Wtd: R1051B - G, any model but must be mint, clean, & cheap

I used radio shack bulbs and they work fine and have been in there for about
200hours. Use real long needle nose pliers and spend a little time and they go
in. Put some coax seal around them so they stick in place and are easy to
change again. No panel pulling at all. Set up the wires so you have a bus bar
somewhere behind the panel for the next time you do it...have fun...

LOAD RESISTORS for testing audio amplifiers:

I can supply you with 200 Watt loads - either 4 ohm, 8 ohm, or 16
ohm resistive loads as follows:

Each set-up would consist of FOUR 50 Watt resistors wired for the
correct load impedence.
These are brand new DALE Gold Series (the best resistors you can get!)
Each set-up rated for 200 Watts would cost $25.00 plus shipping.

I can also supply these as 100 watt loads in either 8 ohms or 16 ohms,
for $15.00 each, plus shipping

748. How About Keeping A Lid On Personal Attacks

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-17 00:00:00 UTC
From: tsm@electrosys.COM

Source record: 65116

Surely, some who have read some of the ethnic slurs and name calling on this reflector have thought perhaps about what this reflector and group is supposed to be about. Surely this group was not formed with the intention of providing a forum of hateful commentary. Unfortunately there are some who subscribe to this group that need to remember that this forum is about old radios and old radio related junk that most of the subscribers would like to read about. When scanning this list, it saddens me to think that intelligent ham radio operators or those interested in old radio equipment would stoop to abusing the rest of us with directed hateful comments.

It is a much smaller world than you may think, so the next time that you have a personal attack agenda that you want to unload on someone, please do the rest of us a favor and get lost on another reflector, or even better, if you have an axe to grind with someone on this reflector, use your intelligence and find out the persons address or phone number and grind your axe directly with him, not with us.

Some of the messages that are like this kind of remind me of what some of the ham bands have turned into in the last 30 years with cursing, name calling, whistles, irritating noise makers and the like. Back in the days of boat-anchors when I was first a ham, the ham bands were completely free of this sort of thing . . no longer . . and now on a boat-anchor users group that people subscribe to for old radio data and information, the majority of us have to be subjected to this sort of tripe. Yes, we can pull the plug, unsubscribe and move on, but that is not why we subscribed to this group in the first place. It is the sorry personal attacks that need to be eliminated so for the majority of us on this group, please keep your personal attacks to yourself or on another forum. Be grown up, talk directly with the individual who you have a problem with or better still, find him and look him eyeball to eyeball and see if you can say the same thing directly to him face to face instead of hiding behind a keyboard.

Sorry for the bandwidth, but thought this needed to be said.

Terry - W5OAS

749. FS: SRA-15 ANTENNA COUPLER 6-18 MHZ, 500W CW 50 OHM

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-17 00:00:00 UTC

We have several CU-421/SRA-15 manually controlled shipboard antenna
couplers that can be used as is or for parts. The are very
conservatively rated at 500 watts CW. My guess they will handle much
more. They use a pie circuit.

They contain one of each of the following major components.
10 to 300 uuf, 15KV Vacuum Variable Capacitor with drive. Jennings
UCS300
50-5000 uuf, 2000VAC Air variable Capacitor Approx. size: "10" L X 6: W
RF coil 6 turn with variable loop
Meter
directional coupler.

These are unused priced at $350.00 FOB Somis
Supplied with a schematic and a copy of the parts list.
for more details please contact me directly.

Look for a product called simichrome,It works wonders on plastic
lenses,scratched cds and also works wellon metal.I found mine at a
jewelry show but recently discovered it at the local motorcycle
shop.If all else fails,I've seen it on Ebay selling for about 7.00 a
tube,I paid 5 for the same size locally.

Hi,

It is a multiplex sideband filter. (they come in sets from 64 to 108 kHz
with 4 kHz channel spacing for multiplex voice systems.)

the 526-9398-00 is a 72 kHz, Lower Sideband with a bandwidth of 2.9kHz
at 1.5 dB down. I do have a graph from which I can estimate that the
bandwidth at 6 DB down is about 3.3 kHz and at 60 dB down is about 5
kHz, roughly 68 to 71 kHz. I'm afraid that's all the info I have - hope
it helps.

Subject: Need JACK for Collins or Drake

I recently acquired a Collins transmitter on which the individual
replaced the microphone jack with a 1/4 inch mike jack. As the plugs on
my microphones are the smaller PJ-068 plugs I need to find a matching
jack to replace the one on the rig. Any help? Thanks & 73

I have some, but they are just plain ordinary jacks, no pretty chrome so
I don't know if they would be suitable. If you can use one send me your
address and I'll mail you one.

Subject: NOS NC-100ASD Manuals $15 At Fair Radio

Just to make the auctioner of the $100 NC-100ASD manual happy ...

I bought 2 NC-100ASD from Fair Radio about a month ago and they are
NOS. These manuals have an addendum sheet for the NC-100ASC stapled
to the inside of the front cover. The C and D models are the same
except for speaker impedance and this sheet lists the half dozen
component differences associated with the different impedances.

http://www.fairradio.com and go to the products section and then to
manuals. The manual is also listed in their current edition of their
catalog.

Subject: R390A Page Updates

Did about 6 hours of work on the WWW site today.

Added an audio problem fix in the Common Failures area of the
technical section thanks to Randy, N4TVC.

Updated the 3TF7 ballast tube solid state replacement page (link is
off the opening page). Added pictures of a working model installed in
a 67 EAC.

Added a page on Ron Hankins PD-1 which works great for SSB reception.

The URL is:

From: Colleen Gillard <cgillard@mediaone.net>
Subject: TCS transmitter, questions, placard?

Hi --

I recently acquired a TCS transmitter. It is finished grey rather
than black, I'm wondering what the distinction is.

It had some mods in the relay and mode circuits that made
it AM only, apparently. Is this a "standard" mod?

The unit is spec'd to run the finals on 400v at 200 ma on CW...
It looks like it could handle a fair amount more. Anybody
know how much is safe for these units?

I'm curious about why the transmitter uses only one final in
AM mode. It seems like a pair of 1625's should be capable
of enough audio power to plate modulate a pair of 1625 finals...

Reasons I thought of:

* be extra conservative with the higher duty cycle of AM
(the cabinet does seem a little low on ventilation)

* not enough gain to get that much audio power with tube
lineup

* the modulation transformer says it is rated at 20 watts. maybe
they were trying to keep the weight down?

The unit I got is missing the placard on the panel... anybody have a
junker
that could supply one, or know where I might find one?

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

We have several CU-421/SRA-15 manually controlled shipboard antenna couplers that can be used as is or for parts. The are very conservatively rated at 500 watts CW. My guess they will handle much more. They use a pie circuit.

They contain one of each of the following major components.
10 to 300 uuf, 15KV Vacuum Variable Capacitor with drive. Jennings UCS300
50-5000 uuf, 2000VAC Air variable Capacitor Approx. size: 10" L X 6" W
RF coil 6 turn with variable loop
Meter
directional coupler.

These are unused priced at $350.00 FOB Somis
Supplied with a schematic and a copy of the parts list.
for more details please contact me directly.

Might anyone out there is Amateur Land have a Schematic for a
Regency EC175 Frequency Counter. My unit seems to be missing
the first decade stage. When I connect it to my FT-101 all I get on
10 meters is blank, blank, 8.xxx. I hope it would read 28.xxx. Maybe
if someone out there has another counter that they are willing to part
with for a small sum, I might best consider that direction. I just got
upgraded to General and want to go on for my first contact with HF.
Thanks and 73's everybody Don Smith KB6GQA

Subject: FS: SRA-15 ANTENNA COUPLER 6-18 MHZ, 500W CW 50 OHM

We have several CU-421/SRA-15 manually controlled shipboard antenna couplers that can be used as is or for parts. The are very conservatively rated at 500 watts CW. My guess they will handle much more. They use a pie circuit.

They contain one of each of the following major components.
10 to 300 uuf, 15KV Vacuum Variable Capacitor with drive. Jennings UCS300
50-5000 uuf, 2000VAC Air variable Capacitor Approx. size: 10" L X 6" W
RF coil 6 turn with variable loop
Meter
directional coupler.

These are unused priced at $350.00 FOB Somis
Supplied with a schematic and a copy of the parts list.
for more details please contact me directly.

From: tsm@electrosys.COM (Terry Muncey)
Subject: How About Keeping A Lid On Personal Attacks

Surely, some who have read some of the ethnic slurs and name calling on this reflector have thought perhaps about what this reflector and group is supposed to be about. Surely this group was not formed with the intention of providing a forum of hateful commentary. Unfortunately there are some who subscribe to this group that need to remember that this forum is about old radios and old radio related junk that most of the subscribers would like to read about. When scanning this list, it saddens me to think that intelligent ham radio operators or those interested in old radio equipment would stoop to abusing the rest of us with directed hateful comments.

It is a much smaller world than you may think, so the next time that you have a personal attack agenda that you want to unload on someone, please do the rest of us a favor and get lost on another reflector, or even better, if you have an axe to grind with someone on this reflector, use your intelligence and find out the persons address or phone number and grind your axe directly with him, not with us.

Some of the messages that are like this kind of remind me of what some of the ham bands have turned into in the last 30 years with cursing, name calling, whistles, irritating noise makers and the like. Back in the days of boat-anchors when I was first a ham, the ham bands were completely free of this sort of thing . . no longer . . and now on a boat-anchor users group that people subscribe to for old radio data and information, the majority of us have to be subjected to this sort of tripe. Yes, we can pull the plug, unsubscribe and move on, but that is not why we subscribed to this group in the first place. It is the sorry personal attacks that need to be eliminated so for the majority of us on this group, please keep your personal attacks to yourself or on another forum. Be grown up, talk directly with the individual who you have a problem with or better still, find him and look him eyeball to eyeball and see if you can say the same thing directly to him face to face instead of hiding behind a keyboard.

Sorry for the bandwidth, but thought this needed to be said.

Terry - W5OAS

Perhaps we should all get back to using the ARRL amateurs code of conduct??

One] An amateur is a gentlemen. He never knowingly uses the hobby in
such a way as to lesson the pleasure of others.

Two] The amateur is loyal

Three] The amateur is progressive

Four] The amateur is friendly

Five] The amateur is balanced

For the full details try looking inside an ARRL handbook.

Is it time to bring back the Woof Houng ??

Subject: 101 ZD Yaesu VFO knob, & other question

Hello, I have a 101ZD Yaesu radio that I was given by a family member before he
passed away.

The VFO knob spins very nice and smooth, but is somewhat wobbly when it
spins...the shaft is tight, but the knob seems a little off center.. Is there
an adjustment for it?

Also, the S-meter will not show any movement or detect incoming signals,
although they are being recieved... I haven't transmitted on anything but a
dummy-load, but the meter works fine for output readings and tuning...any tips
here on what to check?

Many thanks for your insight...One day i'll get a ticket and actually USE it !
Regards,
Joe Pratt

As long as we're giving lessons in grammer, how about, "It's not like any of you ARE even remotely socially acceptable."

Well, actually, if what the poster meant was "any" in the sense of "a single one", then "is" IS correct. "Any" is the subject of the verb, while "you" is the object of the preposition "of" and therefore cannot the the subject. Substitute "a single one" for "any", and pare down the sentence to the essentials, and "is" will be seen to be correct: "It's not like a single one is acceptable."

And BTW, "grammer" is correctly spelled "grammar" (unless you're referring to your grampa's wife).

There. I feel SO much better!

The USB one is 526-9193-00

My list shows USB (Z-4) in 4 kHz steps from 60 to 104 kHz, and LSB in
two series from 64 to 108 but one set (Z-7) is 2.9kHz wide and the other
(Z-8A) 2.4 kHz.
All are the same size (case L).
However, each set uses a differing dB reference level so a true
comparison is difficult unless you can get hold of the complete spec
sheet - I just have the General Catalog with basic specs for the
complete line.

From: "Harold Rappold"
Subject: Hammarlund HQ-170a

I inherited this receiver 5 years ago when my father-in-law passed away and I have a couple of questions about it. What level of quality is this unit and Hammarlunds in general? Was there a "companion" transmitter for this receiver, and if so, do any ever show up for sale? Are tubes still available? Thanks in advance.

Date: Tue, 13 Jun 2000 01:25:22 GMT
From: ae4en@aol.com
Subject: Hammarlund HQ-170a

> Great Harold! It's nice to hear stories of family owned gear staying in the family and enjoyed years later. I hope this happens with the few radios that I own. The good points about the HQ-170, are that it (in my opinion) was one of the better receivers available in it's days. Hams who used the HQ-170A were well equiped. As for use today, there are several hams who use them on the air with good results. They maintain a steadily increasing collectors value. Osterman's book, Shortwave Receivers Past and Present rates it new as a 4 star receiver with 5

being in the top ranks. Hammarlund's generally fall into this category and the 170A is among the premiers of its line. The bad news is really not that bad...used Ostermans book rates it used as a two star receiver. Information in Ostermans book is very debatable but it does serve as a good starting point. Also it is a ham band only receiver that lacks the general coverage features that some of the other receivers made in that era had. This is all without getting into the electronic specs that would complicate the answer to your questions. Tubes are easily available. There are some retail outfits like Antique Radio Supply and discount price individuals selling tubes. Beware when buying from individuals. You may get a used tube (which may be worth $.25) that is described as new. There is someone in Greensboro, NC (someone help me out) by the name of Kirk who I ALWAYS buy from when I see him at a hamfest (radio swap meet). He always represents his stuff properly. For the most part, those tubes in the HQ-170A go anywhere from $3.00 to $8.00 each. DO NOT make the mistake of replacing all of the tubes in that receiver to make it work better. Generally an alignment is what the doctor orders. All that replacing the tubes may do is throw it out of what alignment is left. I highly recommend having it reconditioned by a professional (if you plan on keeping it) for many years of enjoyable listening. Good luck and regards, John. P.S., Flames and spelling lessons directed to me personally, please!

>Thanks,
>Robert

Robert, I'm using an old Shiva LanNet Adaptor with mine (AC out @ 9VAC, 900 mA) which charges the old Gates cells just fine. I'm lucky, had a few old sets of Gates cells around and found a good set to replace the dead ones in the MiniScope. If you change to NiCads you may have to change the charging circuits, as the orig. Gates cells were sealed lead/acid batts.

Hope this helps!
Andrew

Subject: Want RBB or RBC parts.

Hello Charlie:

I have both of these receivers in my radio shack, and they are a pleasure to turn on and listen as you may probably know.

We used them when I was aboard ship, and they were indestructible. Actually, you can copy SSB with them, and they sound great. For broadcast, they have the double RF front end, so you can copy distant stations without interference.

Interesting that you should be restoring them - great. If you require any assistance, let me know.

At this time, I don't have any spare parts, except for tubes, but these receivers are brutes. I have seen them at Dayton, however some time ago. You have to keep searching and asking.

Subject: WTB Heathkit Apache

I would like to hear from someone that has a Heathkit Apache Transmitter that they are not using, and would be willing to sell.
Cosmetic condition is not important, but magnetics must be in good operating condition.
I need the LV transformer to restore an Apache that I am planning to put into service.
Please reply via my e-mail address below.

Source record: 65006

Jim,

Welcome to eBay ....

What happened is pretty typical on eBay. Somebody sits there doing nothing right up to the last second and then puts in his/her bid. They hit the send button and it's registered before the auction ends, but after the point you can do anything about it. If you have a cable modem you can get a half dozen bids in in the last 60 seconds. I have seen several radios go from the <$800 region up to the >$2300 sell price in the last 60 seconds of the auction with a half dozen people putting in bids. None of them bid on the item previously and none of their bids went in before the last 60 seconds ....

At the point the auction is over you would think that it's over. Well, maybe yes, maybe no. The seller may have another of the same item (or maybe another warehouse full ....). The high bidder may drop out (refuse to pay). The top six high bidders may drop out. Either the seller or the other bidder(s) may be in touch with you. What you do at that point is up to you. eBay obviously wants the deal to only go through them .....

A somewhat more civilized way to buy stuff is right here on this news group.

Enjoy!

Bob

Bob,

I used to collect Archtop Jazz Guitars until the market went absolutely nuts. Great. Now I suppose the same thing applys to older amateur radio items? All I want to do is try to get back stuff that I had as a teenager, buying it with my great uncle at Henry Radio in L.A. in 1965 and 1966. What exactly constitutes ham radios that are now worth a fortune? Collins and Heathkits? My problem is that I don't find the new Japanese stuff that interesting. Yes I know that the old stuff is just that, but for some reason that is what still fascinates me in this modern world of cable modems and computers! Jim

Jim,

I couldn't agree with you more.
Be careful, too, with eBay as it seems as though the
bidding period goes through to the END OF THE MINUTE (i.e. "Auction ends at
15:35 PDT" means that bidding is accepted until 15:35:59!). I've lost out on
this one.
No doubt, it is interesting to browse around on eBay but I am finding
myself more and more going back to the old-fashioned way. At least it seems
like the integrity of value exists as well as fewer hucksters and scammers.

Jim:
Would have bid higher if you had the time? Then bid that high to begin with. Ebay lets you put in a maximum bid, but only uses it if it's needed. THE BEST way to use Ebay is to figure out the most you're willing to pay and then bid that. If you lose then, well you didn't want to pay that much anyway. And if the price doesn't go that high, Ebay will only use as much of you bid as is needed to win.
Brian Denley

2 simple rules:

1. Sneak equipment in. If ever caught, tell XYL it is only temporary - that you are "fixing it" for someone.
2. WHENEVER YOU REMOVE A PIECE OF BA GEAR make sure she sees it going out. And make a big deal out of it. You do not have to be disposing of it, just let it ride in the trunk for a week or so then apply rule #1.

Eventually she will get the idea of how this thing works.

Write or find a bidding script.
Typically they sync your clock with the ebay clock and if good
keep tabs on the propagation delays and attempt to make the last bid.
http://www.php.net/
or
http://www.perl.org/
or
just use shell scripts
if you want to write your own.

> 8:57:07 PST auction ended. I'm new to eBAY. How did he do it? Jim

It is called sniping. The object is to try and capture the bid in the last few seconds before anyone else has a chance to up their own bid. However if the last second bid is below the max of the previous bidder then the system will bid on behalf of the previous bidder and they retain the high bid and now the sniper does not have time to reconsider and enter another bid, so as a sniper you have to figure the very max you will pay and then enter the bid as close to the end of auction as possible. If you wish to snipe, to give you the best chance do this; have the auction up on your browser and size the screen so it covers half the monitor. Bring up another browser and size it so it is on the other half of the monitor. On the second screen, have your max bid entered in the box and ready to submit. Keep refreshing the other screen to watch the auction count down. Be aware of the few seconds delay it may take to refresh the screen and when you have 10-15 seconds to go hit enter on the other screen to submit your bid. The faster connection you have the closer you can get to the last seconds. Make sure you bid is the max you are willing to pay. If you capture the high bid then hopefully no one else has time to reconsider and bid again.
Or get one of the programs that will monitor the auction end time and automatically submit your bid for you in the last few seconds.

Here is a better way. Wait until the last minute. Keep hitting reload on your browser until
the Ebay time is 1 min to go then place your maximum bid. The person on the other end will not have time to respond as it will take you 30 to 45 seconds to enter in your bid and password. I know this is cutting it close, but it has worked for me when I just had to have it.

Randy.

Ebay. A great place to sell, a lousy place to buy for the most part.

A friend of mine asked me to help him find out the value and help sell his son's old HW-101, Manual, Matching speaker, Matching AC supply, and Turner P"Plus 3" desk mic. No Mods. The rig has been in storage for years and looks great! A couple of small scratches on the top cover, other than that, it looks brand new. Haven't tried it on transmit, but receive works ok with exception of some noisy pots and wafer switches. Great for collector wanting one that would be easily restored to mint condx. Asking $200 + shipping. (Any ideas if that's close to the going price???)

Perhaps we should all get back to using the ARRL amateurs code of conduct??

One] An amateur is a gentlemen. He never knowingly uses the hobby in
such a way as to lesson the pleasure of others.

Two] The amateur is loyal

Three] The amateur is progressive

Four] The amateur is friendly

Five] The amateur is balanced

For the full details try looking inside an ARRL handbook.

Is it time to bring back the Woof Houng ??

Hi,

I do most of those things and get most of those comments.

The wifes golf buggy was dying, she was pushing it up hills,
a new battery was $70, I found one at a hamfest, ex computer
no break supply, $5, works fine.

I make a fuss of each item that leaves the house.

I gave her a vintage domestic radio for christmas.

Ray Robinson VK2ILV

That is eBay's theory of how proxy bidding should work, drawn, loosely, from how proxy bidding works in the live auction world. The problem with this scenario is that while you may be able to figure out what the most you are willing to pay on an item is, you of course wouldn't mind paying a lot less, if you can. Therefore, you put in a somewhat lower bid than you are willing to pay, and hope no one outbids you. Then you wait, and watch. This is how it is done at Sotheby's and Christie's in New York (I have attended a number of auctions there, just as a spectator sport, when they allow it). The proxies glued to cell phones are seeking last minute instructions from their clients. The process works fairly well, and fairly at least, for all concerned. The system works because everyone is given the time and fair warning. This isn't so on eBay, unless you or your own *live* proxy is present to the end, and even there slow or faulty internet access can spell success or failure. The best strategy I know of for buying things off of eBay is to bid low and often. Put in a bid that is 10-15% less than you are really willing to pay for a lot, and move on. For most items, the opportunity will return shortly. Just play the averages, and in a short time, though not *instantly* you will have the rig you want at a price you can more than live with. If you go to www.aade.com and check out the digest of prices paid for ham gear on eBay over the past two years, you will see that there is a huge range for any item, especially for the more common and heavily traded things. Patience will reward you.

All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation. I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume,
volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

Hi Will.....
I remember reading the review of both those rigs from QST in 1975 (or '74..forget)
I finally went with the Kenwood, and would still get a 520 if they were both available to me. I dunno, I think it is more solid, and reliable. The price has jumped a bit lately, cuz some of the nut-jobs suddenly think the 520 has something to do with Collins!
After the original 520, some changes were made to reduce cost/increase profit.
I believe the DC-DC converter became an option and perhaps the ability to turn off the heaters went away with the SE version. My 520 replaced a Heath HW-101, and went with me to field days, and never gave me a speck of problems. A great rig!
Regards....Dave

Subject: FS: 6BL8 tubes....

I have a large number of 6BL8 / ECF80 Vacuum tubes for sale..... Stock up on
spares for your boatanchor..... These tubes are as far as I can tell, new,
unused. Some are in their original packets and some are in the manufacturers
bulk pack (for distribution to electronics manufacture I guess).
I will airmail anywhere in the world at purchasers' cost.
Tubes cost $2US each plus postage.

From: David Ausley <dausley@hiwaay.net>
Subject: FS: Heathkit HW-101

A friend of mine asked me to help him find out the value and help sell
his son's old HW-101, Manual, Matching speaker, Matching AC supply, and
Turner P"Plus 3" desk mic. No Mods. The rig has been in storage for
years and looks great! A couple of small scratches on the top cover,
other than that, it looks brand new. Haven't tried it on transmit, but
receive works ok with exception of some noisy pots and wafer switches.
Great for collector wanting one that would be easily restored to mint
condx. Asking $200 + shipping. (Any ideas if that's close to the going
price???)

Email offers or comments to: dausley@hiwaay.net

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Jim,

Welcome to eBay ....

What happened is pretty typical on eBay. Somebody sits there doing
nothing right up to the last second and then puts in his/her bid. They
hit the send button and it's registered before the auction ends, but
after the point you can do anything about it. If you have a cable

modem you can get a half dozen bids in in the last 60 seconds. I have seen several radios go from the <$800 region up to the >$2300 sell price in the last 60 seconds of the auction with a half dozen people putting in bids. None of them bid on the item previously and none of their bids went in before the last 60 seconds ....

At the point the auction is over you would think that it's over. Well, maybe yes, maybe no. The seller may have another of the same item (or maybe another warehouse full ....). The high bidder may drop out (refuse to pay). The top six high bidders may drop out. Either the seller or the other bidder(s) may be in touch with you. What you do at that point is up to you. eBay obviously wants the deal to only go through them .....

A somewhat more civilized way to buy stuff is right here on this news group.

Enjoy!

Bob

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Bob,

I used to collect Archtop Jazz Guitars until the market went absolutely nuts. Great. Now I suppose the same thing applys to older amateur radio items? All I want to do is try to get back stuff that I had as a teenager, buying it with my great uncle at Henry Radio in L.A. in 1965 and 1966. What exactly constitutes ham radios that are now worth a fortune? Collins and Heathkits? My problem is that I don't find the new Japanese stuff that interesting. Yes I know that the old stuff is just that, but for some reason that is what still fascinates me in this modern world of cable modems and computers! Jim

Vern,

What newsgroups are good to post ads on where the integrity is high? This one in particular seems very up front and honest. I always remember ham operators as being a bunch of very honest people. Hopefully that has not changed. Jim

Jim,

I couldn't agree with you more.
Be careful, too, with eBay as it seems as though the
bidding period goes through to the END OF THE MINUTE (i.e. "Auction ends at 15:35 PDT" means that bidding is accepted until 15:35:59!). I've lost out on this one.
No doubt, it is interesting to browse around on eBay but I am finding myself more and more going back to the old-fashioned way. At least it seems like the integrity of value exists as well as fewer hucksters and scammers.

Write or find a bidding script.
Typically they sync your clock with the ebay clock and if good
keep tabs on the propagation delays and attempt to make the last bid.
http://www.php.net/
or
http://www.perl.org/
or
just use shell scripts
if you want to write your own.

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Jim:
Would have bid higher if you had the time? Then bid that high to begin
with. Ebay lets you put in a maximum bid, but only uses it if it's needed.
THE BEST way to use Ebay is to figure out the most you're willing to pay and
then bid that. If you lose then, well you didn't want to pay that much
anyway. And if the price doesn't go that high, Ebay will only use as much
of you bid as is needed to win.
Brian Denley

It is called sniping. The object is to try and capture the bid in the
last few seconds before anyone else has a chance to up their own bid.
However if the last second bid is below the max of the previous bidder
then the system will bid on behalf of the previous bidder and they
retain the high bid and now the sniper does not have time to reconsider
and enter another bid, so as a sniper you have to figure the very max
you will pay and then enter the bid as close to the end of auction as
possible. If you wish to snipe, to give you the best chance do this;
have the auction up on your browser and size the screen so it covers
half the monitor. Bring up another browser and size it so it is on the
other half of the monitor. On the second screen, have your max bid
entered in the box and ready to submit. Keep refreshing the other screen
to watch the auction count down. Be aware of the few seconds delay it
may take to refresh the screen and when you have 10-15 seconds to go hit
enter on the other screen to submit your bid. The faster connection you
have the closer you can get to the last seconds. Make sure you bid is
the max you are willing to pay. If you capture the high bid then
hopefully no one else has time to reconsider and bid again.
Or get one of the programs that will monitor the auction end time and
automatically submit your bid for you in the last few seconds.

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Here is a better way. Wait until the last minute. Keep hitting reload on your
browser until
the Ebay time is 1 min to go then place your maximum bid. The person on the
other end will not have time to respond as it will take you 30 to 45 seconds to
enter in your bid and password. I know this is cutting it close, but it has
worked for me when I just had to have it.

Randy.

Ebay. A great place to sell, a lousy place to buy for the most part.

That is eBay's theory of how proxy bidding should work, drawn, loosely,
from how proxy bidding works in the live auction world. The problem with
this scenario is that while you may be able to figure out what the most
you are willing to pay on an item is, you of course wouldn't mind paying
a lot less, if you can. Therefore, you put in a somewhat lower bid than
you are willing to pay, and hope no one outbids you. Then you wait, and
watch. This is how it is done at Sotheby's and Christie's in New York (I
have attended a number of auctions there, just as a spectator sport,
when they allow it). The proxies glued to cell phones are seeking last
minute instructions from their clients. The process works fairly well,
and fairly at least, for all concerned. The system works because
everyone is given the time and fair warning. This isn't so on eBay,
unless you or your own *live* proxy is present to the end, and even
there slow or faulty internet access can spell success or failure. The
best strategy I know of for buying things off of eBay is to bid low and
often. Put in a bid that is 10-15% less than you are really willing to
pay for a lot, and move on. For most items, the opportunity will return
shortly. Just play the averages, and in a short time, though not
instantly you will have the rig you want at a price you can more than
live with. If you go to www.aade.com and check out the digest of prices
paid for ham gear on eBay over the past two years, you will see that
there is a huge range for any item, especially for the more common and
heavily traded things. Patience will reward you.

2 simple rules:

1. Sneak equipment in. If ever caught, tell XYL it is only temporary
- that you are "fixing it" for someone.
2. WHENEVER YOU REMOVE A PIECE OF BA GEAR make sure she sees it going
out. And make a big deal out of it. You do not have to be disposing
of it, just let it ride in the trunk for a week or so then apply rule
#1.

Eventually she will get the idea of how this thing works.

========
Yep should bring a coupla hundred dollars.

Four places to look at realized prices at URL:
http://ac6v.com/pageswap.html

You will get a lot more for the equipment if you have it all checked out as
fully functional and that it meets specs + the cosmetic condition and photos
if you sell on-line.

Swap pages for selling at URL:
http://ac6v.com/pageswap.html#swap

>Well, actually, if what the poster meant was "any" in the sense of "a single
>one", then "is" IS correct.

Sorry, you're wrong. You cant use "is" unless you say "anyone" or, as you put
it, "a single one". But if you say, "if any of you...etc.", you must use
"are".

Subject: choke rewinding

I don't think this is going to be of any help OM, but when I was in
Santo Domingo, Dominican Republic, I smoked the choke in my HT-37.
Local hams sent me down to the city's "radio row" where I find a
couple of guys working off a street corner who specialized in
rewinding transformers. They did an excellent job and it cost me a
lot less than 135.00 Good luck. 73 Bill

From: Andrew Cowley <andy.cowley@uwe.ac.uk>
Subject: Cleaning dial plastic cover

Try any chrome, brass or silver polish. They will all work. The
silver polish is the finest so slower for removing scratches,
but great for finishing. In the U.K. we have 'Brasso' for the
first cut then 'Silvo' or `Solvol Autosol` for finishing

Andy Cowley

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and

also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $395 each plus shipping.

Subject: FA: 1928 SILVER-MARSHALL "FOUR" - last 2 days

Extremely rare 1928 model SILVER-MARSHALL "Round The World" FOUR
receiver in very good condition, working, includes tubes, coils and a
set of 1925 Brandes headphones.
See page 95 of June 2000 QST for an interesting writeup about this
hard-to-find receiver (the first commercial short-wave radio ever to use
a tetrode tube); tunes 17.4 to 204 meters. The QST oldtime radio author,
K2TQN, says he has only seen 2 of these sets for sale in good condition
during the past 4 years.
The reserve price has been met and this radio will be sold in 2
days. At this point, the high bidder will "steal" it.
For a picture of my radio & more info, go to this page and click on
SILVER MARSHALL - thanks - Stan, WA2BAH

Subject: FA: 1928 SILVER-MARSHALL "FOUR" - last 2 days

I wonder if the author was familiar with the Leutz "Shortwave Unit" - a complete regenerative receiver using plug in coils and a type 222 tube circa 1927 but, alas, far less common than the Silver Marshall Round-the-World Four.

From: acomarow@aol.com (AComarow)
Subject: FS: Jackson triggered scope

5-inch oscilloscope, Jackson model CMO-3, I'm guessing ca early '60s because of the three-wire cord. Extremely clean, with three probes (straight though with clip leads, demodulator, and low-cap), two of them in the original boxes. No manual. Nice bright trace, triggers on internal calibration and external 60Hz. Snazzy chrome bezel if you like stylish touches.

It ain't state of the art, but it sure is pretty...and it works to the extent I tried it out. Jackson was a solid name in test gear, as oldtimers on this list know.

Prefer local pickup in Washington DC area but will consider shipping.

$50 plus shipping OBO.

73, Avery W3AVE in Potomac, Md.

Subject: FS: Vintage Telefunken RS 235 triodes

Hi,

I came across these wonderful Telefunken RS 235 triodes. They are quite similar to the better knows RS 237 but they have another socket and a topcap.

I have two pcs and this is probably your last chance to get such
valves. I have never seen these before, and they seem to be even more
rare than the RS 237.
I will take a picture of them tonight so I can send a pic with e-mail
to those who are interested.

Some technical data: Vf 10V/3.5A Va 1000V S=4.0mA/V u=12
Pd=100W

Serious offers will be considered.

Best regards,

Arnold Goksyr

Subject: Info on Clapp-Eastham RADAK R4/A4 needed

Clapp Eastham R4 was offered at $25.00 as a complete regenerative receiver in 1923. The 1914 date is the Armstrong regenerative circuit license patent date. The A4 was offered at $25.00 as a matching two stage audio amplifier. Source: Radio Manufacturers of the 1920s, Volume 1, Alan Douglas, Author.

These units are very scarce and highly collectable today.

In the merchant marine people buy Standard radios because they repair or
replace them very cheaply. Maybe they have such a deal on your radio.

From: ekugrad@mindspring.com (David Robbins)
Subject: WTT Collins 75A3

I have a very nice condition Collins 75A3 receiver SN 1206, that I would like to trade. It is complete and in working order. The front panel and cabinet are in excellent condition with no dings or dents. The lettering on the front panel is mint, as are both dials. Chassis is dusty, and could use a cleaning. Some of the controls are in need of a shot of de-oxit, (a little scratchy) but the radio is working. I got it and planned to clean it up and use it, but before I got around to it, I acquired a 75A4.

The radio comes with the stock filter, and a Homebrew plug-in NBFM adaptor. The only mod I know of is an added PL-258 plug on the back. Not sure what it is for (muting circuit?) I have a copy (not original) of the manual.

Not really interested in selling. Would like to trade for another radio or radios. What do you have to trade? Collins, Drake,

Hallicrafters, Johnson, Hammarlund, Ten Tec, Kenwood, Yaesu. I'm just looking for something new to play with.

See the radio at
<http://www.mindspring.com/~ekugrad/images/MY_75A3.jpg>

I am located near Raleigh, NC

Thanks and 73

==========
Hi Larry -- I have a Kent single paddle brass key. Tis tarnished as
brass does. The plastic paddle part broke and I replaced it with a like
size PC board material -- won't break for sure. Otherwise -- nice
condition. Reason for selling -- someone sold me a single paddle Bencher
for a nice price -- which I use now.

Make me an offer on the Kent.
New price is PL-PK103 KENT SINGLE PADDLE

> Regards....Dave

The 520 was and still is a nice rig. I purchased one in 1974 right after they were announced. My choice was between a used Collins KWM 2 without the power supplies and the new 520 for about the same amount of money. I chose the 520 largely because it was new instead of used and had the 117 AC supply and the DC to DC converter built into it. These would have been extra purchases with the KWM2.

I kept the 520 for 6 years running it mobile and portable a lot and it did everything I ever asked of it and nothing ever broke. After I traded it off for a pair of Kenwood 599D twins, I had the opportunity to get a FT101E at a good price which was also a nice rig and had the bonus of the 160 meter band. The 101E was a better rig than the early 101 and 101B models and put out a bit more power that the 520, but in my opinion it was less user friendly and the design ergonomics were not as good as the 520's. I also liked Kenwood's choice of 6146Bs for the final amplifier as opposed to the sweep tube Yaesu finals.

Like you I can not believe the prices being paid for an original 520. I saw one on EBAY recently that was close to $400. I don't know if this is nostalgia or maybe related to that fact that due to the licensing changes there are more hams needing HF equipment. I recently found a 520s at a hamfest for $200 and it still does a good job on today's bands, but I don't think I would have paid $400 for it. I noticed that

Yaesu 101 prices are starting to climb also.

Source record: 65064

Scott:

If I understand your problem correclty, that "goo" is solder flux, it is intended to mix with the solder and the joint creating good solder flow. There are chemicals like Carbon tet that can remove it, but you accomplish nothing by doing this and expose yourself to unessesary chemicals. So leave it be.

That stuff you are seeing is just flux residue from the solder.
Unless the flux is from an acid core solder it will do no harm.
Soldering flux is in fact a mild acid that, when heated, cleans
the impurities off of the soldering surface.

There are a lot of chemicals that will remove the flux residue
but you are better off leaving it as is. Radio Shack sells some
circuit board cleaner that will do the job, but it's pretty
weak stuff, since the EPA got on everyone's case about the other
chemicals.

A short story is in order here.

Once upon a time, a friend of mine had a microcomputer to assemble
and solder. He didn't like the looks of the brown goo left by
the solder flux so he obtained some solder that had no flux (Yes,
you can by solder with out a flux core). He then proceeded to
assemble and solder the microcomputer. When he was done he applied
power but nothing happened. Not even one LED segment tried to
light up.

He brought it over to my house so that I could check it out.
When I started looking around, with a scope, I could see some
dignals but lots of things were missing, like grounds, vcc,
etc.. Then he told me about the solder he used.

I didn't have the time right then so I asked him to leave the
board with me and I would get it working. When he left, I
proceeded to re-solder the entire board, but this time with
a flux core solder. When I got done re-soldering it there was

lots of brown goo on the board, but when it was powered up,
it worked perfectly. The lack of flux, when the board was
originally soldered, made for hundreds of cold solder joints.
I did remove the brown goo, for my friend, but it wasn't necessary.

Martin

Jim
Do a search on ebay for the word snipe and set the price range between 8 and 40$ you will get back more than a 1/2 dozen programs for sniping auctions.
Snipe programs can enter your bid in the last 10 to 30 seconds and some can be set to increment your bid by a small amount in the last 5 to 10 seconds all without you even bring at the computer.
The more people that are bidding on a auction the more people it attracks.
I would never place a bid letting everyone know that I wanted an item until the last few seconds.
By placing a bid during the auction, you are loudly proclaiming to other potential bidders, "Hey, everybody -- I want this item and I want it bad!"
This gives other bidders plenty of time to re-think their own maximum bid, and to decide that they may be willing to pay an extra $5 or $10 dollars for the item. So the bidding goes up and up!
Good luck bidding
Port

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com. (aka http://www.hamexam.com -- easy to remember address--tell your mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's less than $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

From: "Mike Srock"
Subject: ART-13 autotune fix help

Help with ART-13 autotune needed.

The autotune on my ART-13 has a mechanical problem I hope
someone can help me with.

There is a screw with a floating nut on the right front side of the
transmitter
that runs between two finger type switches. This controls the autotune
cycle and reverses the motor. The metal insert in the floating nut that
runs back and forth down the screw is slipping inside of the wood-like
housing that rides on a shaft to keep it from spinning free. Anyway, the
autotune ran for quite a while before I realized the slipping was happening
and
the floating nut was not moving. I need to know how to set the autotune
so that it is operating correctly and reversing direction at the correct
point again.

Does anyone have a copy of the manual that has autotune maint instructions?
Is there an easy way to know where to set the autotune?

Thanks for any help!

Email direct please!

Subject: Callsign hats

A socially inept, gay person of Southeast Asian origin? All this
hostility over some sloppy proofreading, really! I will answer the

original question (what kind of nerd would wear his callsign on his hat?): the same kind who wears a belt *and* rainbow suspenders, an elastic strap to keep his galsses on his head, and two earphones (from different HTs), usually seen stalking the aisles of hamfests for a $50 SX-88, or holding up traffic at a green light while he changes taps on his homebrew bugcatcher.

From: kr4wm@mindspring.com (Web Williams)
Subject: Heathkit SB-1000 info needed

Anyone know how much current is in the relay-keying path of a Heathkit SB-1000 amplifier? I used to have an SB-200 that I unknowingly hooked into my Icom-735 with relay-blowing results. I don't want to repeat that! I know the SB-1000 coil voltage is 12 volts, and I suppose I -could- just insert an ammeter in the line and measure it- but if someone has the "by-the-book" specs then I would know where to go from this point.

Thanks, -Web Williams in Myrtle Beach, SC

From: Matt Erickson
Subject: Heathkit SB-1000 info needed

Just put a ameter across the relay jack, the ameter is a "short", so the amp will key up, and you can get your current reading. It is probly in the area of 500ma.

Web Williams wrote:

Anyone know how much current is in the relay-keying
path of a Heathkit

SB-1000 amplifier? I used to have an SB-200 that I unknowingly hooked

into my Icom-735 with relay-blowing results. I don't want to repeat
that!

I know the SB-1000 coil voltage is 12 volts, and I suppose I -could-
just

insert an ammeter in the line and measure it- but if someone has the

"by-the-book" specs then I would know where to go from this point.

Thanks, -Web Williams in Myrtle Beach, SC

Subject: Hurry over to ebay.....

Yes sometimes the word "RARE" is over used but in many cases when a unit
it truely "RARE" it is not used. So if you are looking of r RARE items

to add to your collection do not do a search with the work RARE in it.

And it will go down down down, as the novelty passes. It's just a cycle,
and collectibles follow it more closely than most other markets. Give it
another 6-8 years, and watch the prices on old rigs (except a few real
rarities, like the SX-88, HRO-500, some Collins stuff) come back down.

Hi All,
Not to get off subject here, just a survey-type question.

Ever have this conversation??? S = spouse B = boatanchor collector

S: "What is all of this junk/crap/stuff down here???
B: " What do you mean? This is all GOOD stuff!!!"
S: "Oh please, this is getting ridiculous!! This junk is taking up room and
let's not evn talk about how much you have spent on it!"
B: "But it is great stuff!! It works better than the new junk being produced,
sounds better and keeps the room warm on cold nights!!"
S: "I can't even get through here with the wash to go outside and hang it up!!!
I swear, if one more of these THINGS shows up, I will scream....."
B: (knowing that there are 2 more on the way and now scrambling on figuring out
where to hide them).. " Yes dear....."

I don't know about you, but I have taken to hiding them out in the garage...
(no-mans-land)

everyone wants something mint and clean and cheap. What do you think one that
meets the mint and clean should be if its to be cheap? The Gov. paid about
40,000 for one that was "MINT and CLEAN" so do you think mine that meets both
criteria with spares for 500.00 is cheap enough?

BA Fans:
I have an interesting Viking 1 with a Heath VF1 VFO. The front panel is
NOT original (painting and lettering done by a meticulous local ham.) The
transmitter worked until recently, I'm told, but doesn't have enough drive
(I've noticed the Driver pot has a gritty feel to it - I strongly
suspect that the pot is the only thing wrong with this transmitter)
Clean, and in a nice DX-100 case. No manuals or mic. Looks like the
original knobs. Meter is very nice, and vernier is smooth.
$100 firm, pickup only within 100 miles of Indianapolis, Indiana. I'm
not going to ship this thing! In know the price is right, and I know that a
plate-modulated AMer would enjoy this one. Here are some pictures:

Neil- I have a Kent single paddle- in very good condition.- asking $100
plus about$4 to ship.
Reason for offer- I haven't used it since my son gave me a Vibroplex
(paddle, not key), so it's been gathering dust on the bookshelf

From: "Tim Hynde"
Subject: Circuit board goo?

Scott:

If I understand your problem correclty, that "goo" is solder flux, it is intended to mix with the solder and the joint creating good solder flow. There are chemicals like Carbon tet that can remove it, but you accomplish nothing by doing this and expose yourself to unessesary chemicals. So leave it be.

That stuff you are seeing is just flux residue from the solder.
Unless the flux is from an acid core solder it will do no harm.
Soldering flux is in fact a mild acid that, when heated, cleans
the impurities off of the soldering surface.

There are a lot of chemicals that will remove the flux residue
but you are better off leaving it as is. Radio Shack sells some
circuit board cleaner that will do the job, but it's pretty
weak stuff, since the EPA got on everyone's case about the other
chemicals.

A short story is in order here.

Once upon a time, a friend of mine had a microcomputer to assemble
and solder. He didn't like the looks of the brown goo left by
the solder flux so he obtained some solder that had no flux (Yes,
you can by solder with out a flux core). He then proceeded to
assemble and solder the microcomputer. When he was done he applied
power but nothing happened. Not even one LED segment tried to
light up.

He brought it over to my house so that I could check it out.
When I started looking around, with a scope, I could see some
dignals but lots of things were missing, like grounds, vcc,
etc.. Then he told me about the solder he used.

I didn't have the time right then so I asked him to leave the
board with me and I would get it working. When he left, I
proceeded to re-solder the entire board, but this time with
a flux core solder. When I got done re-soldering it there was
lots of brown goo on the board, but when it was powered up,
it worked perfectly. The lack of flux, when the board was
originally soldered, made for hundreds of cold solder joints.
I did remove the brown goo, for my friend, but it wasn't necessary.

========
Yep should bring a coupla hundred dollars.

Four places to look at realized prices at URL:
http://ac6v.com/pageswap.html

You will get a lot more for the equipment if you have it all checked out as
fully functional and that it meets specs + the cosmetic condition and photos
if you sell on-line.

Swap pages for selling at URL:

Subject: FT-101 vs. TS-520?

Hi Will.....
I remember reading the review of both those rigs from QST in 1975 (or '74..forget)
I finally went with the Kenwood, and would still get a 520 if they were both available to me. I dunno, I think it is more solid, and reliable. The price has jumped a bit lately, cuz some of the nut-jobs suddenly think the 520 has something to do with Collins!

After the original 520, some changes were made to reduce cost/increase
profit.
I believe the DC-DC converter became an option and perhaps the ability to
turn off the heaters went away with the SE version. My 520 replaced a Heath
HW-101, and went with me to field days, and never gave me a speck of
problems. A great rig!
Regards....Dave

> Regards....Dave

The 520 was and still is a nice rig. I purchased one in 1974 right after
they were announced. My choice was between a used Collins KWM 2 without
the power supplies and the new 520 for about the same amount of money. I
chose the 520 largely because it was new instead of used and had the 117
AC supply and the DC to DC converter built into it. These would have
been extra purchases with the KWM2.

I kept the 520 for 6 years running it mobile and portable a lot and it
did everything I ever asked of it and nothing ever broke. After I traded
it off for a pair of Kenwood 599D twins, I had the opportunity to get a

FT101E at a good price which was also a nice rig and had the bonus of the 160 meter band. The 101E was a better rig than the early 101 and 101B models and put out a bit more power that the 520, but in my opinion it was less user friendly and the design ergonomics were not as good as the 520's. I also liked Kenwood's choice of 6146Bs for the final amplifier as opposed to the sweep tube Yaesu finals.

Like you I can not believe the prices being paid for an original 520. I saw one on EBAY recently that was close to $400. I don't know if this is nostalgia or maybe related to that fact that due to the licensing changes there are more hams needing HF equipment. I recently found a 520s at a hamfest for $200 and it still does a good job on today's bands, but I don't think I would have paid $400 for it. I noticed that Yaesu 101 prices are starting to climb also.

From: "PB"
Subject: How Did He Do IT With Only 20 Seconds To Spare?

Jim
Do a search on ebay for the word snipe and set the price range between 8 and 40$ you will get back more than a 1/2 dozen programs for sniping auctions.
Snipe programs can enter your bid in the last 10 to 30 seconds and some can be set to increment your bid by a small amount in the last 5 to 10 seconds all without you even bring at the computer.
The more people that are bidding on a auction the more people it attracks. I would never place a bid letting everyone know that I wanted an item until the last few seconds.
By placing a bid during the auction, you are loudly proclaiming to other potential bidders, "Hey, everybody -- I want this item and I want it bad!" This gives other bidders plenty of time to re-think their own maximum bid, and to decide that they may be willing to pay an extra $5 or $10 dollars for the item. So the bidding goes up and up!

Good luck bidding

Need a SB220 filament / bias transformer, can be new or good used..
Also looking for a plate meter and a couple other parts. Anyone parting
out a SB220 ? Will buy or swap for what you need. Thanks Merv K9FD

911. Meter alignment for Dentron MT3000A Tuner - Help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-21 00:00:00 UTC
From: Allen Underdown <wbrco@valuenet.net>
Message-ID: <L1g45.64$qB5.397784@news1.i1.net>
Source record: 64848
Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Does anybody have the alignment proceedure for the
forward and reverse power meters for the Dentron
MT3000A? The operating manual that I got when
I purchase the unit doesn't have any thing of the sort.
I fixed the problem with the board in back (very simple
fix - don't know why the guy who I bought it from didn't
figure it out...) but the meters are wacky..

I've tried adjusting some the two caps on the SWR board
and the pots for sensitivity, but the reflected still acts funny.

Email any help!!!
Thanks and 73!!
Allen - N0GOM

913. Halli SX-28's LF amplifier tech questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-21 00:00:00 UTC
From: Emanuele Girlando <emanuele_girlando@yahoo.com>
Message-ID: <8iosp9bac1@nslave2.tin.it>
Source record: 64975

Can you gurus answer some of these technical questions?
They are related to the SX-28's LF amplifier. Answers will be summarised on my SX-28/LF ampl page (http://space.tin.it/clubnet/egirland/sx28/Power%20Supply%20&%20LF-amplifier/LF-amp.htm).
Please refer to that page to find a clear diagram of the amplifier itself. I have also posted it to "alt.binaries.radio.pictures".

1. design guidelines and pro's and con's of the approach
2. working conditions of the pre- and final- amplifier (A, AB,AB1,AB2,..)
3. what is the C40 function?
4. What is the C76-R43 network useful for?
5. Why is R37 shorted when the "bass" switch it in the OUT position? Shouldn't it remain in for the sake of symmetry with the inverter plate resistor R36?

Thank you to all for sharing your knowledge!
ciao
Emanuele Girlando (IW1DHI)
http://space.tin.it/clubnet/egirland/

914. Info needed RE Vintage Microphone

Newsgroup: rec.radio.amateur.boatanchors

From: "M. Kassay" <michael.kassay@sympatico.ca>
Message-ID: <39500E9F.F8BB9343@sympatico.ca>
Source record: 64976

Hi...I recently acquired a "Shure Ultra - wide range- crystal
microphone - model 700a " It looks like a D-104 with a 'U' bracket
holding it to the mic stand.
The mic stand is a "American Microphone company" wood grain plastic
type stand with slide switch.

Can anyone help me with the following....

Year it was made

Any possible online info or vintage microphone sites

finally...possible value of this mic....

Thanks in advance..

Mike

Subject: FS: Collins 32S3 located in Paris France

Somehow I ended-up with a 32S3 for sale in Paris .
It is a wing emblem ,the front panel is very good looking ,all the electronics
under the chassi is like new, all the resistors colors are still bright ,the
top of the chassi needs cleaning , never been used very much ,never been
cannibalized .and I did a complete realignment last year,I remember the
Balanced Modulator carrier rejection is better than average .

Subject: fs: HEATHKIT HW-5400 W/Supply, Tech Spec $200+UPS

Hi Fellas;
I have for SALE:
Heathkit HW-5400 transceiver(Brown Series) all solid state, 80 thru 10 mtrs

w/warcs, plus the matching power supply and cables, has digital clock on the fave es speaker within.
I DO NOT have the manuals and I am not a technician, so I cannot repair it. It came from an estate. It is in very nice condition except there are scratches along both sides of each unit, seems like they were slide against each other causing the cabinet screws to deface the cabinets(covers)
Heres the Story: The power supply clock lights up but when the rig is turned on, there is a clicking sound coming from the back of the HW-5400, I think its the main relay, why its clicking is beyond me!
Price is $200 plus UPS from 11758
Thanks es 73....Rich WA2RQY (1961)

From: "Lamb" <k7fm@teleport.com>
Subject: Spouses vs. Boatanchors.....

I built a 3 story "barn" in which to store my toys. Once every year or so I
make a token sale of something I never should have purchased in the first
place and give her the money as rent.

As stated earlier, the secret is having so many boatanchors that one more
cannot be detected.

It also helps if every year or so you can find just the right part to fix
something of hers. Then, you can honestly state that you need all of this
stuff to be able to fix her things. I found just the right ball bearing
race 10 years ago to fix her vacuum cleaner on a weekend and still milk that
for all I can.

Remember all of the positive things that happen because of your large
collection of junk. Since they are infrequent, write them down and review
them occasionally. Women are able to remember those things you do not do
well for decades.

Talk her into getting a codeless tech ham license. Then you can justify
those boatanchors to help you talk to her. Then buy her a handheld with

all the bells and whistles that she hates. Finally, get her a simple single channel rig for $25 and you have just acquired a $500 handheld for yourself. And you can put a mobile rig in every car just for her to be able to find you.

As much as you hate television set repair, let your wife think that all your equipment is necessary to maintain her television. When it breaks, take it out to your shop and tell her you are going to work on it. After she is asleep, load it into the car and take it down to the television shop. When it is fixed, sneak it back to your shop and proudly carry it from your shop to television room and install it. Pay for the television out of your slush fund. Then, write this achievement down ot the list mentioned earlier.

Once a year try to buy something that is simply a good buy for the purpose of selling on e-Bay. Then sell it for a profit. Make sure your wife knows and give her the profit (be sure to deduct the cost). Write this down on your list. Remember, everything is an investment for the big estate sale.

Remind your spouse that your buddies spend their money on mistresses and golf. Your boatanchor collection does not allow you the time nor money for either of those vices and you are determined to stay happily married because you do not have the time, energy or inclination to haul all of the boatanchors away - and that the only way they will leave is at an estate sale.

Once every few years, use your ham radio to arrange a vacation at some remote part of the world. Leave the ham gear home and have a romantic vacation. When you get back, put that on your list. It is better if you use a boatanchor to arrange the vacation.

As a result of the above practice, I can receive 3 or 4 boxes of boatanchors on the same day with not more than a "more stuff for you came today" or " don't you already have enough stuff?" Give your wife a kiss, tell her you love her, and recite the list you have now memorized.

From: Mark Rehorst <mrehorst@ddc.stanfordmicro.com>
Subject: Wtd: R1051B - G, any model but must be mint, clean, & cheap

> Wtd: R1051B - G, any model but must be mint, clean, & cheap

The R-1051B I received from Fair Radio Sales last week is pretty clean.
It was about $400 delivered. Add about $50 for a manual (and you
DO want the manual).

My radio has been serviced (as they all have) and the service guys don't

quite do the same sort of solder job that the factory did, but
everything
is functional (except the dial lamps are burned out).

I replaced the mode switch knob because the one that was on the set was
cracked and had been super glued, and cracked again.

I am starting to look at modifications to the set now. First, the freq.
setting
knobs, especially 100, 10 and 1 kcs knobs are hard to rotate so I will
try
reducing the spring tension on the detent rollers, or maybe even remove
the
detents completely. I will also be opening the modules to check the
switches
to see if they can rotate 360 degrees without something breaking. If
so, I will
take the stops out of the tuning knobs so they can be rotated 360
degrees.
These two changes should make tuning MUCH easier.

One of the two dial lamps are nearly impossible to change, and even if
you
take the radio apart, finding replacement lamps is expensive. I will
probably
install some LEDs in place of the dial lamps, but it's a low priority
bacause
you can see the digits just fine without the lamps anyway.

I've opened a couple of the modules to have a look-see. They are
absolutely
beautiful. When you get a radio, pull the cover off the front-end
module
(the one with the tubes). You'll quickly see why the military spent so
much
on these radios.

If you find a cheap source of radios/modules, let me know!

I didn't dust 'em off.
All have been off air for 10 years except SX101A which I listened to
about 3 years ago. Have original manuals for all except maybe the 101A
Will have to look for this one. Find a period rack
and build yourself a rare SR1000 and sell it on the auction for $10k :-)
Radios are unmolested with the exception of the HT-37 which has some
minor mods for RTTY. Want to sell as a lot only. Shipping issues.
I can ship on a pallet by motor freight for approx $150 to $250 in
continental USA. or come pick 'em up in Atlanta. Did not have energy to
pull SX101A off the shelf. Radios look better in parson than in photos.
$1K will buy. Might have a period microphone to throw in as well.

From: Bob <bob@atl.org>
Subject: WTS: Watkins Johnson 9049, WJ-9049, built for the Shah of Iran, 1 of 3 built, 1 of
1 known

Here is your chance to be the only kid on your planet with a Watkins
Johnson 9049 monitoring system. I wish I could keep this but it but
spouse, has been offered a job in Honolulu. and the $/sq foot for
housing prohibits much in the way of a BA collection.

This is one of three systems built. The other two went to some govt
monitoring post in europe. No one would tell me more.

See photos at:
http://www.edebris.com/WJ-9049/

This system is built with DEC LSI computers running WJ's finest 1978
vintage solid state analog radio gear. If you have any questions about
the units, I'll try to answer. The WJ factory seals are intact.
None of this stuff has been molested. I doubt it's been powered up
since 1980. I have no manuals but do have some marketing material.
Manuals for the core radios should be relatively easy to come by.
The DEC LSI stuff is easy to find, software development stuff is
easy to find. The DRD unit runs multiple fixed frequency color displays.
Nothing special about them and I can throw in some NOS displays from
about the same period as the system.

$21k includes shipping by motor freight within the continental USA.
Or, come pick it up and I'll knock off $1.5K

>4. What is the C76-R43 network useful for?
>5. Why is R37 shorted when the "bass" switch it in the OUT position?
>Shouldn't it remain in for the sake of symmetry with the inverter plate
>resistor R36?

Emanuele,

The audio section in the SX-28 uses the approach where the preamp drives one half of the push-pull pair, then the grid resistor from this half is tapped and the signal is taken from the tap and amplified by the other half of V12 to provide the opposite phase. This approach yields high gain and was fairly common in it's day. The S-27 and S-36 amplifiers were similar. Though I haven't actually measured the bias voltages, I suspect the outputs run close to AB1, while the preamp is A. C40 is probably a phase correction to insure stable operation. C76-R43 similarly roll off some of the high frequencies, or might be to give some protection of the output transformer if the load is momentarily removed while signal is present. Regarding the bass switch and R37, that is a real mystery. I never noticed this before. I wonder if the circuit is REALLY wired that way, or if it is a misprint on the schematic. I suspect the latter since LC network CH2 and C43 as well as the C42 and the TONE potentiometer R35 are shown shorted in the IN position of the switch. Operationally, my SX-28 TONE control works in either position of this switch, so something is strange somewhere. If yours is already apart, trace the circuit around the switch. Let me know what you find.

Collins PM-2 "Lightweight" A-C Power Supply for the KWM-2/2A Transceiver in Good working condition. The original owner made some cutouts in the rear chassis cover (what was he thinking?). I recently acquired it with an a KWM-2 that I am restoring and will be powering with a 516F-2. Included is an original manual that I got with the unit.
It is heavy for shipping at about 14 lbs. Buyer pays for a heavy corrugated box and bubble wrap ($2.50) plus actual shipping for FedEx 3 day or USPS (I do not use UPS here, too much damage). U.S. sales only please.

I've often wondered about this assertion (guns being inherently
more dangerous because of their design goal). Two facts
come into play: cars are not expressly designed to injure
people. How do the gun control people reconcile that fact,
the number of people harmed by cars, the number of people
harmed by guns, and the design goals of each?

Second fact. I suppose I'd better say "fact". I read it
in '73 magazine so who knows. Anyway, Wayne Green
claims that when gun control was enacted in Austrailia
the crime rate soared. This goes to the argument the
anti-gun-control folks put forward - that only criminals
will have guns. Anyway, how do the pro-gun-control
people respond to it. I do not find fault with the fact
that if guns are outlawed, then only criminals will have
guns when understood to mean outlawing possession
for the ordinary citizen. I definitely want U.S. soldiers
to be very well armed!

Guns are by no means expressly designed to injure people. They are expressly
designed to propel projectiles. The intent (and the lack of skill and
training) of the individual operating the gun can and does cause injury to
people.

Just like a car. The intent and the lack of skill and training skill of the
person opertaing it can and does cause injury to people.

Tony, thanks for responding.
When I was in the Navy I was in Antartica for 1 1/2 years (1960-1962)
Most of the comm gear was from WW2 including RBCs. They neaver failed.
Thouhgt it would be fun to bring one back to life. I also have the RBB
but no power supply. I can make one that will do from my junk box.
It would be fun to have a TBL too but I think that would be a bit much.

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment and general going over. The service manual and operating manual are included with the rig....The original SBE mic is too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition. This rig is also capable of 12 VDC operation, though I have not tested that feature.
Price: $140.00 Shipping is additional.

In article <394DF705.C1D3F900@mindspring.com>, Will <wcwhite@mindspring.com> writes:

>One other question (and thanks to those who have replied): what is the >difference between the 520, the 520S, and 520SE versions?

Hello Will,

While my experience with them is limited, I would favor the 520 over the 101. There are actually many versions of the 101, and some of the early ones had some odd problems.

The 520 has an AGC off position, which not many rigs have. It's very useful on CW. Also uses the common 6146 final, rather than the sweep tubes in the 101 (but there is a mod for the 101 to use 6146s)

TS-520: 80-10 meters, white dial, early version. Good, but not the best.

TS-520S: 160-10 meters, gray dial, hookup for DG-5 digital readout

TS-520SE: 160-10 meters, no provision for DC operation. Late model, somewhat less expensive.

There is also a very rare version with the digital readout built-in.

I'd look for a clean 520S or SE. Main points would be condition, CW filter, and whether it had the DG-5.

As to rising prices, I've noticed an odd effect over the past 33 years as a ham. It seems that when a rig is current, its value is pretty high. Then as it gets older, its price slowly drops until it reaches a minimum at age 20-30 years. After that, it becomes an "antique" or "collectible" and its value rises again - often beyond its purchase price!

About a decade ago I saw a mint condition 75A4 with all the filters at a hamfest for $250 - and it wasn't selling. Today that same receiver would get several times that - even off eBay!

Thanks to all that responded to my post. I got a good idea from you replies of what the equipment might be worth. I'm going to try to get a look at them in the next week and find out exactly what the family wants to do with them. as soon as I have seen them and have an idea what they want to do I will post it. Again I thank all of you for your replies.

943. WTB Globe Scout Knobs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-22 00:00:00 UTC
From: Lee Bahr <w5drc@earthlink.net>
Message-ID: <3951A1FC.91EFBD01@earthlink.net>
Source record: 64861

I'm in great need!! I've got a good looking WRL Globe Scout 66. The only thing really wrong with it are the three small knobs. The knobs are not the correct ones. I think all the WRL Globe Scouts used the same 3 small knobs with an arrow on them. If anyone could help me out, I would greatly appreciate it.
As a side note, I had a Globe Scout 40A as a kid with the round meter. My Globe Scout 66 has a plastic square meter. If any kind sole could come up with a Globe Scout 40A or at least one with a round meter, I would love to add it to my original station's collection. Please contact me if anyone could help.
Lee Bahr w0vt Houston

Source record: 64864
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

I am not familiar with that unit, but the caps may work similar to other swr bridges and are to adjusted while connected to a good dummy load for zero or minimum reflected power. Then the resistors are adjusted for the correct power. You may need to reverse the antenna and load coax (feed power in backwards from normal) to adjust the power range of the reverse (reflected) power.

Most of the AM activity is between 29.0 and 29.1 mhz. I often
call CQ on 29.020 MHZ. Hope to hear you on!

73, Chuck (W3FJJ)

Subject: Spouses V. BA's

My spouse keeps asking when I am going to bring the boatanchor
(SX-110) downstairs and hook it up to the stereo system so she
can listen to shortwave during the day....

Scott W4PA

Oh, to have a spouse like that! My second wife regarded any piece
of gear that didn't get HBO or chat rooms TOTALLY useless I used to have a line running
from the ham
shack to the family room going from the patch bay to the "AUX"
input of the stereo. *I* liked it, anyway.....

John WB9OFG

Date: Fri, 16 Jun 2000 13:18:31 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Spouses vs. Boatanchors.......

I guess I'm lucky with regards to my wife's tolerance of my
ham radio addiction. As long as I keep the gear either in
my hamshack or neatly stored in the garage, and keep it out
of the rest of the house, she says nothing about it at all.
Those limitations also keep me from accumulating too much
gear at any given time (which, as you know, is WAY too easy
to do!).

From: Bob Weiss
Subject: Vacuum tubes?

Graphite anodes have a higher heat capacity, and resist damage from temporary overloads better than metal would. The graphite is often treated with other materials (zirconium) to act as a "getter" to absorb stray gas molecules. Graphite also tends to be more dimensionally stable than metal when operated at the red-hot temperatures common in internal-anode transmitting tubes. Metal anodes tend to melt or warp if severely overheated.

From: tontoe2001@aol.com (Tontoe2001)
Subject: Wtd: R1051B - G, any model but must be mint, clean, & cheap

I used radio shack bulbs and they work fine and have been in there for about
200hours. Use real long needle nose pliers and spend a little time and they go
in. Put some coax seal around them so they stick in place and are easy to
change again. No panel pulling at all. Set up the wires so you have a bus bar
somewhere behind the panel for the next time you do it...have fun...

Date: 16 Jun 00 17:51:03 GMT
From: Doug_Hensley@GENERALHEALTH.ORG (Doug Hensley)
Subject: Wtk: Is N0ALO still around ?

Does anyone know if Lynn Brock is still doing panels? Has anyone had anything
done in the last 30 - 60 days ?

Thanks

From: "Ross, Allan [WDLN2:2M56:EXCH]" <alross@americasm01.nt.com>
Message-ID: <39525369.A0FD340F@americasm01.nt.com>
Source record: 64875

Hello fellow boat anchor users,

I am trying to repair my T-599D, which suffered a "meltdown" in the Bias Control circuit board when a final tube developed a screen grid to control grid short. I need two high voltage transistors, made originally by Hitachi. They are part numbers 2SC856 and 2SC857. RF Parts does not list these types. Pacific Coast listed them but could no longer supply them. So if anyone out there knows where these parts (or functional equivalents) might be available, I would very much appreciate hearing from you.

Thanks and 73,

Al VE3DMR home e-mail; ve3dmr@rac.ca

Hello--

Can anyone use a batch of 7984 tubes? Two NOS/boxed (1 GE, 1 Dumont)
and five unboxed/pulls (all have shiny getters-- one looks a little
pale).
$12.00 buys the batch of seven, plus $4.00 priority mail postage (U.S.).

The following magazines are available-- all are in G+ to VG condition
(contents intact, but obviously read and appreciated) except as noted:

Ham Radio; $1.00 each
April 81
June 83
July 83
August 83
September 83
October 83
November 83
January 84
March 84
March 90 missing its front cover
May 90

Add $2.25 for book-rate postage (U.S.) for any quantity of the
magazines.

73,
Brad AA1IP

I've tried that, and it doesn't work the way a standard SWR
bridge would work (at least in my expectations).
Do you own one of these units? Can you look at the
adjustable caps on the SWR board and see if the wire
connecting them is soldered to the input wire from the transmitter?

Allen

I have a nearly complete (no control boxes) Collins TCS radio set for sale. The RX is gray and the TX is black. So I suppose you could say that they don't match. They work though and I have the AC power supply and interconnecting cables. I understand the AC power supply is fairly rare, as dynamotor power supplies were the usual set-up. I don't want to even consider shipping this set. It is just too heavy and to much work to properly pack them. So if you want the set you'll have to pick it up in San Luis Obispo. E-mail me at n6kb@juno.com if you're interested and want to make an offer.

i have a complete [not working] gonset sidewinder 2 meter tranciever. its all there and the power-supply seems to work as it powers up the rig.....but it does nothing. oh the lights come on but no receive or transmit. there are a couple of tubes in there, maybe there bad, i dont know. this is a 144 to 148 mhz ssb, am, and cw tranceiver. the complete manual is included with this set. if your handy and can trouble shoot this thing it would make a very nice vintage set-up. if your familiar with the rig you know it's not very large but it does weigh about 25 pounds so packing and shipping will cost around $20.00 if anyone is interested i will take $40.00 and that will include the shipping any where in the lower 48 states. thanks in advance & 73.....george

I have an old Lewyt corp. United States Air Force Signal Generator model # TS-452B/U could someone please help me out and tell me where i may find info on this of if any of you can tell me about it.Any help would be appreciated. Please email me at sms36@home.com or post msg here. Sorry it this is not the right place to post this info.

982. WTB WRL Globe Scout

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-23 00:00:00 UTC
From: Lee Bahr <w5drc@earthlink.net>
Message-ID: <3952EB46.2CACECB9@earthlink.net>
Source record: 64900

I was trying to refurbish one and now maybe two WRL Globe Scouts. The quest is growing and too lengthy to explain. I had a model 40A as a kid and can get one needing silk screening now from another ham. I have a model 66 and it is missing the 3 small knobs and also needs silk screening. I maybe can buy a clunker model 65 with burned up meter, front panel holes with rusty cabinet. I'm not sure about a reasonable price on this one. I'd like to get a 40A going as it was my original rig when I bought one new as a kid in 1954. I'd like to get the correct knobs on my model 66.
Does anyone have a Globe Scout that would get me to where I want to be? I can handle restoration and repair, if I can get the needed parts.
Thanks for your interest.
Lee Bahr w0vt

Hello. I acquired an FT-101-E at a hamfest this weekend and have had a couple of problems tuning it up.

From what I've read, this is due to the fact that I'm missing the accessory plug. If anyone could send me
details on how to build a replacement, I'd appreciate it very much.

Thanks a lot, and 73's
Justin Seger

Subject: FS: SRA-15 ANTENNA COUPLER 6-18 MHZ, 500W CW 50 OHM

We have several CU-421/SRA-15 manually controlled shipboard antenna couplers that can be used as is or for parts. The are very conservatively rated at 500 watts CW. My guess they will handle much more. They use a pie circuit.

They contain one of each of the following major components.
10 to 300 uuf, 15KV Vacuum Variable Capacitor with drive. Jennings UCS300
50-5000 uuf, 2000VAC Air variable Capacitor Approx. size: 10" L X 6" W
RF coil 6 turn with variable loop
Meter
directional coupler.

These are unused priced at $350.00 FOB Somis
Supplied with a schematic and a copy of the parts list.
for more details please contact me directly.

Subject: FT-101 vs. TS-520?

While not strictly speaking BAs, which of these two (Yaesu FT-101 series
and Kenwood TS-520 series) "hybrid" rigs has the better overall

receiver? Which is the better CW rig? They appear to be roughly comparable in features, price, and age. What are the notable differences?

Subject: How About Keeping A Lid On Personal Attacks

Surely, some who have read some of the ethnic slurs and name calling on this reflector have thought perhaps about what this reflector and group is supposed to be about. Surely this group was not formed with the intention of providing a forum of hateful commentary. Unfortunately there are some who subscribe to this group that need to remember that this forum is about old radios and old radio related junk that most of the subscribers would like to read about. When scanning this list, it saddens me to think that intelligent ham radio operators or those interested in old radio equipment would stoop to abusing the rest of us with directed hateful comments.

It is a much smaller world than you may think, so the next time that you have a personal attack agenda that you want to unload on someone, please do the rest of us a favor and get lost on another reflector, or even better, if you have an axe to grind with someone on this reflector, use your intelligence and find out the persons address or phone number and grind your axe directly with him, not with us.

Some of the messages that are like this kind of remind me of what some of the ham bands have turned into in the last 30 years with cursing, name calling, whistles, irritating noise makers and the like. Back in the days of boat-anchors when I was first a ham, the ham bands were completely free of this sort of thing . . no longer . . and now on a boat-anchor users group that people subscribe to for old radio data and information, the majority of us have to be subjected to this sort of tripe. Yes, we can pull the plug, unsubscribe and move on, but that is not why we subscribed to this group in the first place. It is the sorry personal attacks that need to be eliminated so for the majority of us on this group, please keep your personal attacks to yourself or on another forum. Be grown up, talk directly with the individual who you have a problem with or better still, find him and look him eyeball to eyeball and see if you can say the same thing directly to him face to face instead of hiding behind a keyboard.

Sorry for the bandwidth, but thought this needed to be said.

Perhaps we should all get back to using the ARRL amateurs code of conduct??

One] An amateur is a gentlemen. He never knowingly uses the hobby in
such a way as to lesson the pleasure of others.

Two] The amateur is loyal

Three] The amateur is progressive

Four] The amateur is friendly

Five] The amateur is balanced

For the full details try looking inside an ARRL handbook.

Is it time to bring back the Woof Houng ??

ABBOTT model TR-4 two meter transceiver from 1946. This was one of the first 2 meter rigs manufactured after WW2. It is a modulated oscillator type. It is in good physical condition and complete except that the outer cabinet is missing. It has not been tested. You will need a power supply. Price $35 plus s & h from Schenectady, NY

From: Bis_Wichy@webtv.net
Message-ID: <1915-3953BE52-32@storefull-163.iap.bryant.webtv.net>
Source record: 64923

Several companies had owned the Hallicrafters name. Last ham rig was produced in 1972 -73.

The name was then sold. Saw some Jap Radios and one Jap CB with the Hallicrafters name.

Several individuals bought the name in the hopes of starting a business but all failed and went bankrupt. No one seems to know who the names owner is now...

Not that it matters - except for a few hams and SWLs, no one under 30 seems to remember the Hallicrafters brand (or admits to knowing it)

Pity - they made some fantastic radios at prices normal folks could afford...

FS FT-101B.. $ 275.00...This is a very nice unit, with a
seriel number in the 315,000-s, making it a later B model...it is in
very nice condition, and I will gladly send jpg-s to anyone seriously
interested..this unit works great, and includes the original manual..
I am assuming that most of you know the details of this radio, as it
certainly is one of the best built radios of the 70-s, or for that
matter, probably still is the best built(sturdiest) radio around...the
weight of this radio in my estimation makes it to dangerous to ship
without the original carton, so this is a pickup in the Long Island ,
NYC area....if you care to discuss other arrangements, please remove
the (ns) from my address or click on bobco@i-2000.com
and drop me an e-mail.....Bob on Long Island

>From: Steve Fried k2pts@home.com

I don't frequent this group to often for chat just read. But, I saw this post & had to read it.

You guys are just a riot. I can;t beleive so of you actually have to make excuses just to bring in a radio.

Some of you guys ideas are just laughable. I'm glad I'm a radio collector. I have 2 boatanchors myself. Along with several other radios.

Steve I have to correct you on one thing. In the bible GOD said wife's submit to your husbands. Not women be submisstive to men. That had nothing to do with boatanchors. Or radios let along TV's and such.

Nice try. But, us woman aren't stupid.

WE buy, restore, sell & collect radios, TV's & appliances. So, I know what room means in the house. I make sure my husband tells me ahead of time he's getting something & how much room it will take up anywhere in the house or garage.

So, we can make room for it before he or I buy the item. It helps to plan ahead. My husband works with me on this & we watch out buget just in case it's to much to soon.

Building shelves in your garage & house helps out alot. It's true there no such thing as to much stuff as long as you have a place to put it.

Plus, keep stuff does help fix other stuff later. Also have sales every once in awhile helps as well. Looking through your stuff & deciding what you might need to keep & what has sat around for several years that needs to go helps the wife stay off your back as well.

Finding people that are looking for that part on line on radio buy, sell, trade helps it get gone quicker.

So, there are ways to make the wife happy. Just use common since. We do and it makes a great marriage in such a hobby.

Sincerely Paula Wood
Ft. Worth Texas. PS. Keep on Collecting Collectors.

I have too many ten Tec power supplies and need to sell two. Selling at a loss to move them.

1. 262G Power supply for the Triton IV (540) blew the fuse..it lights but no voltage $50 with manual/schematic.
This has the VOX circuits and they are OK.

2. 252M Power Supply with cable for Omni and manual/schematic. This has a ten tec speaker and amp meter
and works. $80

Will sell both for $110. Send me $120 and will ship CONUS. Reply by e-mail only.

I have a TS520S that is truly NIB, it has not been touched or even used, which can be seen by looking at the final section as all components are very shiny and new, as is everything else inside and out, like it was made yesterday! It also has two filter installed, a ssb and cw Kenwood factory. I was wondering what the true collector value would be, not what a everyday hamfest price would be. Any collectors out there?

Thanks for any info...Curt

1015. Collins TCS for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-23 00:00:00 UTC
From: n6kb@fix.net
Message-ID: <uLV55.13$Kq2.4473@news.callamer.com>
Source record: 64933

I got a complete set (no control boxes, so maybe it's not really complete) I have TX, RX, and AC Power supply. E-mail n6kb@juno.com

1016. Old tubes and surplus

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-24 00:00:00 UTC
From: Phil Witt <w4imm@mindspring.com>
Message-ID: <1np9ls0d4stf187daab44a2onps9atmqlo@4ax.com>
Source record: 64794

My son probably wouldn't post this but I will. He has accumulated a ton of really good surplus equipment and WWII vintage tubes, which he is beginning to auction on eBay. If I had any room I would be bidding on some of this stuff. And if he had any room he wouldn't be selling it. He doesn't seem to like the idea of posting FA posts so you might want to look in on this URL from time-to-time.

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=braddy

Hate this is spam but hope some people will appreciate it.

1017. Collins 212Z-1 Remote Amplifiers for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-24 00:00:00 UTC
From: Chris <ck5@ix.netcom.com>
Message-ID: <39550D78.125D@ix.netcom.com>
Source record: 64795
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $395 each plus shipping.
73 Chris VE3NGW/W4 Florida

1018. WTB Heathkit DX-100

Newsgroup: rec.radio.amateur.boatanchors

Looking for DX-100 not DX-100B. Condition more important than price.
Prefer local pickup, around Houston, Dallas, Austin, San Antonio, etc.,
but am flexible on shipping.

Paul W5NTQ

1019. WTB:BC-375 AT Schematic

Newsgroup: rec.radio.amateur.boatanchors

From: Dan Bryden <bryden@deltanet.com>
Message-ID: <3954EE0D.6FA3FAE1@deltanet.com>
Source record: 64797

I need just the schematic for the HF tuner portion of the BC-375 Radio.
If someone could Xerox the manual pages or if you have an extra manual.
Glad to pay for your trouble. I also have the LF antenna tuner module
for this radio which is complete and in good condition if some one needs
it for their restoration. Dan WA6PXO

From: David Ausley <dausley@hiwaay.net>
Subject: FS: Heathkit HW-101

A friend of mine asked me to help him find out the value and help sell
his son's old HW-101, Manual, Matching speaker, Matching AC supply, and
Turner P"Plus 3" desk mic. No Mods. The rig has been in storage for
years and looks great! A couple of small scratches on the top cover,
other than that, it looks brand new. Haven't tried it on transmit, but
receive works ok with exception of some noisy pots and wafer switches.
Great for collector wanting one that would be easily restored to mint
condx. Asking $200 + shipping. (Any ideas if that's close to the going
price???)

Email offers or comments to: dausley@hiwaay.net

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Jim,

Welcome to eBay ....

What happened is pretty typical on eBay. Somebody sits there doing nothing right up to the last second and then puts in his/her bid. They hit the send button and it's registered before the auction ends, but after the point you can do anything about it. If you have a cable modem you can get a half dozen bids in in the last 60 seconds. I have seen several radios go from the <$800 region up to the >$2300 sell price in the last 60 seconds of the auction with a half dozen people putting in bids. None of them bid on the item previously and none of their bids went in before the last 60 seconds ....

At the point the auction is over you would think that it's over. Well, maybe yes, maybe no. The seller may have another of the same item (or maybe another warehouse full ....). The high bidder may drop out (refuse to pay). The top six high bidders may drop out. Either the seller or the other bidder(s) may be in touch with you. What you do at that point is up to you. eBay obviously wants the deal to only go through them .....

A somewhat more civilized way to buy stuff is right here on this news group.

Enjoy!

Bob

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Bob,

I used to collect Archtop Jazz Guitars until the market went absolutely nuts. Great. Now I suppose the same thing applys to older amateur radio items? All I want to do is try to get back stuff that I had as a teenager, buying it with my great uncle at Henry Radio in L.A. in 1965 and 1966. What exactly constitutes ham radios that are now worth a fortune? Collins and Heathkits? My problem is that I don't find the new Japanese stuff that interesting. Yes I know that the old stuff is just that, but for some reason that is what still fascinates me in this modern world of cable modems and computers! Jim

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Jim,

I couldn't agree with you more.
Be careful, too, with eBay as it seems as though the
bidding period goes through to the END OF THE MINUTE (i.e. "Auction ends at 15:35 PDT" means that bidding is accepted until 15:35:59!). I've lost out on this one.
No doubt, it is interesting to browse around on eBay but I am finding myself more and more going back to the old-fashioned way. At least it seems like the integrity of value exists as well as fewer hucksters and scammers.

Write or find a bidding script.
Typically they sync your clock with the ebay clock and if good
keep tabs on the propagation delays and attempt to make the last bid.
http://www.php.net/
or
http://www.perl.org/
or
just use shell scripts
if you want to write your own.

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Jim:
Would have bid higher if you had the time? Then bid that high to begin
with. Ebay lets you put in a maximum bid, but only uses it if it's needed.
THE BEST way to use Ebay is to figure out the most you're willing to pay and
then bid that. If you lose then, well you didn't want to pay that much
anyway. And if the price doesn't go that high, Ebay will only use as much
of you bid as is needed to win.
Brian Denley

It is called sniping. The object is to try and capture the bid in the last few seconds before anyone else has a chance to up their own bid. However if the last second bid is below the max of the previous bidder then the system will bid on behalf of the previous bidder and they retain the high bid and now the sniper does not have time to reconsider and enter another bid, so as a sniper you have to figure the very max you will pay and then enter the bid as close to the end of auction as possible. If you wish to snipe, to give you the best chance do this; have the auction up on your browser and size the screen so it covers half the monitor. Bring up another browser and size it so it is on the other half of the monitor. On the second screen, have your max bid entered in the box and ready to submit. Keep refreshing the other screen to watch the auction count down. Be aware of the few seconds delay it may take to refresh the screen and when you have 10-15 seconds to go hit enter on the other screen to submit your bid. The faster connection you have the closer you can get to the last seconds. Make sure you bid is the max you are willing to pay. If you capture the high bid then hopefully no one else has time to reconsider and bid again.
Or get one of the programs that will monitor the auction end time and automatically submit your bid for you in the last few seconds.

Subject: How Did He Do IT With Only 20 Seconds To Spare?

Here is a better way. Wait until the last minute. Keep hitting reload on your browser until
the Ebay time is 1 min to go then place your maximum bid. The person on the other end will not have time to respond as it will take you 30 to 45 seconds to enter in your bid and password. I know this is cutting it close, but it has worked for me when I just had to have it.

Randy.

Ebay. A great place to sell, a lousy place to buy for the most part.

Subject: How Did He Do IT With Only 20 Seconds To Spare?

That is eBay's theory of how proxy bidding should work, drawn, loosely,
from how proxy bidding works in the live auction world. The problem with
this scenario is that while you may be able to figure out what the most
you are willing to pay on an item is, you of course wouldn't mind paying
a lot less, if you can. Therefore, you put in a somewhat lower bid than
you are willing to pay, and hope no one outbids you. Then you wait, and
watch. This is how it is done at Sotheby's and Christie's in New York (I
have attended a number of auctions there, just as a spectator sport,
when they allow it). The proxies glued to cell phones are seeking last
minute instructions from their clients. The process works fairly well,
and fairly at least, for all concerned. The system works because
everyone is given the time and fair warning. This isn't so on eBay,
unless you or your own *live* proxy is present to the end, and even
there slow or faulty internet access can spell success or failure. The
best strategy I know of for buying things off of eBay is to bid low and
often. Put in a bid that is 10-15% less than you are really willing to
pay for a lot, and move on. For most items, the opportunity will return
shortly. Just play the averages, and in a short time, though not
instantly you will have the rig you want at a price you can more than
live with. If you go to www.aade.com and check out the digest of prices
paid for ham gear on eBay over the past two years, you will see that
there is a huge range for any item, especially for the more common and
heavily traded things. Patience will reward you.

Subject: Spouses vs. Boatanchors.....

2 simple rules:

1. Sneak equipment in. If ever caught, tell XYL it is only temporary
- that you are "fixing it" for someone.
2. WHENEVER YOU REMOVE A PIECE OF BA GEAR make sure she sees it going
out. And make a big deal out of it. You do not have to be disposing
of it, just let it ride in the trunk for a week or so then apply rule

#1.

Eventually she will get the idea of how this thing works.

Hi,

I do most of those things and get most of those comments.

The wifes golf buggy was dying, she was pushing it up hills,
a new battery was $70, I found one at a hamfest, ex computer
no break supply, $5, works fine.

I make a fuss of each item that leaves the house.

I gave her a vintage domestic radio for christmas.

Here are the tidbits of info I have on my "master card file" --

TS-452/U FM Microvoltmeter/Scope/Signal Generator
manual is TM 11-2695
also try USAF T.O. 33A1-8-89-12 (sorry, don't have either here)

covers 5 to 108 MHz in 6 bands
115VAC, single-phase, 50 to 1600Hz input power
metal carry case
90 pounds
originally cost govt. $475
In Oct. 1963 E.C.Hayden surplus house sold them for $75

Source record: 64749

FS FT-101B.. $ 275.00...This is a very nice unit, with a
seriel number in the 315,000-s, making it a later B model...it is in
very nice condition, and I will gladly send jpg-s to anyone seriously
interested..this unit works great, and includes the original manual..
I am assuming that most of you know the details of this radio, as it
certainly is one of the best built radios of the 70-s, or for that
matter, probably still is the best built(sturdiest) radio around...the
weight of this radio in my estimation makes it to dangerous to ship
without the original carton, so this is a pickup in the Long Island ,
NYC area....if you care to discuss other arrangements, please remove
the (ns) from my address or click on bobco@i-2000.com
and drop me an e-mail.....Bob on Long Island

For Sale: Excellent condition General Electric 120 V/60hz Variable Auto Transformers. 12 amp (approximately 1.4 kW). Open frame construction for behind the panel mounting. 1/4 inch shaft approximately 4 inch long. Terminal Barrier strip on side of casting frame for all connections. Removed from a test fixture. Fairly compact given the wattage. Approximately 6" by 5" excluding shaft and base mounting ears. $35 each plus UPS
from zip 95827

tnx for the read

Bob, KE6F

1065. FLDX/FRDX400 Alignment Data

Do you need the AN/ARC-5 rack or the SCR-274N rack for
your transmitters? They have different connectors.
If your transmitters are BC-4xx, you need a 274N rack.

Your correct reply does not represent the pro-gun
control people's thinking. They claim guns are
designed to hurt people - see Leonard Martin's
post. I've heard that argument time and time again.
The same people who are vehemently opposed
to gun ownership by ordinary people never say
we ("ordinary people") should not own cars. Yet
far more people are killed/injured by cars. If saving
lives was the true motivation, I would think that the
pro-gun-control people would be as vigorous in seeking
a solution to automobile related death/injury as they
are in seeking gun control. But I want to hear from
those who claim that a gun " is an object expressly
designed to injure people" on this point. Their "logic"
escapes me.

Hi Gang,

I have for sale a Kenwood TS-120 HF Transceiver. You can see a picture at:

http://members.home.net/ke3ok/My_Photos/000417-003.jpg

It covers the 80, 40, 20, 15 and 10 meter bands. It works great and would make a great mobile rig. The front panel is in great shape but the cabinet has scratches. It comes with the mobile mounting bracket, users manual and a copy of the shop manual. $250 plus shipping from 50315. Payment by US Postal money order only. No COD's. Personal checks will be returned un-cashed. Thanks and 73,

Al

Hi Gang,

I have for sale a very nice Hallicrafters SX-110. You can see a
picture of it at:

http://members.home.net/ke3ok/My_Photos/000314-018.jpg

It is in great shape and everything is there. It covers .54 to 34 MHZ
and works on all bands. There is a sticker on the top of the cabinet
that could be easily removed. As you can see from the picture there is
a small bend in the edge of the cabinet in the lower left corner that
could be straightened. Other than those two small problems it is in
great shape. I'm asking $125 plus shipping and packing from 50315.
Payment by US Postal money order only. No COD's. Personal checks will
be returned un-cashed. Thanks and 73,

Al

You are welcome to download a free copy of the manual from the
BoatAnchor Manual Archive. While you are there check out the several
hundred other manuals that are available for downloading. If you see
that you have a manual that isn't in the BAMA collection, perhaps you
would be willing to scan it and upload it so that others might have
access to it.

Subject: Circuit board goo?

Scott:

If I understand your problem correclty, that "goo" is solder flux, it is intended to mix with the solder and the joint creating good solder flow. There are chemicals like Carbon tet that can remove it, but you accomplish nothing by doing this and expose yourself to unessesary chemicals. So leave it be.

That stuff you are seeing is just flux residue from the solder.
Unless the flux is from an acid core solder it will do no harm.
Soldering flux is in fact a mild acid that, when heated, cleans
the impurities off of the soldering surface.

There are a lot of chemicals that will remove the flux residue
but you are better off leaving it as is. Radio Shack sells some
circuit board cleaner that will do the job, but it's pretty
weak stuff, since the EPA got on everyone's case about the other
chemicals.

A short story is in order here.

Once upon a time, a friend of mine had a microcomputer to assemble
and solder. He didn't like the looks of the brown goo left by
the solder flux so he obtained some solder that had no flux (Yes,
you can by solder with out a flux core). He then proceeded to
assemble and solder the microcomputer. When he was done he applied
power but nothing happened. Not even one LED segment tried to
light up.

He brought it over to my house so that I could check it out.
When I started looking around, with a scope, I could see some
dignals but lots of things were missing, like grounds, vcc,
etc.. Then he told me about the solder he used.

I didn't have the time right then so I asked him to leave the
board with me and I would get it working. When he left, I
proceeded to re-solder the entire board, but this time with
a flux core solder. When I got done re-soldering it there was
lots of brown goo on the board, but when it was powered up,
it worked perfectly. The lack of flux, when the board was
originally soldered, made for hundreds of cold solder joints.
I did remove the brown goo, for my friend, but it wasn't necessary.

Martin

Yep should bring a coupla hundred dollars.

Four places to look at realized prices at URL:
http://ac6v.com/pageswap.html

You will get a lot more for the equipment if you have it all checked out as
fully functional and that it meets specs + the cosmetic condition and photos
if you sell on-line.

Swap pages for selling at URL:
http://ac6v.com/pageswap.html#swap

Subject: FT-101 vs. TS-520?

Hi Will.....
I remember reading the review of both those rigs from QST in 1975 (or '74..forget)
I finally went with the Kenwood, and would still get a 520 if they were both available to me. I dunno, I think it is more solid, and reliable. The price has jumped a bit lately, cuz some of the nut-jobs suddenly think the 520 has something to do with Collins!

After the original 520, some changes were made to reduce cost/increase
profit.
I believe the DC-DC converter became an option and perhaps the ability to
turn off the heaters went away with the SE version. My 520 replaced a Heath
HW-101, and went with me to field days, and never gave me a speck of
problems. A great rig!
Regards....Dave

> Regards....Dave

The 520 was and still is a nice rig. I purchased one in 1974 right after
they were announced. My choice was between a used Collins KWM 2 without
the power supplies and the new 520 for about the same amount of money. I
chose the 520 largely because it was new instead of used and had the 117
AC supply and the DC to DC converter built into it. These would have
been extra purchases with the KWM2.

I kept the 520 for 6 years running it mobile and portable a lot and it
did everything I ever asked of it and nothing ever broke. After I traded
it off for a pair of Kenwood 599D twins, I had the opportunity to get a

FT101E at a good price which was also a nice rig and had the bonus of the 160 meter band. The 101E was a better rig than the early 101 and 101B models and put out a bit more power that the 520, but in my opinion it was less user friendly and the design ergonomics were not as good as the 520's. I also liked Kenwood's choice of 6146Bs for the final amplifier as opposed to the sweep tube Yaesu finals.

Like you I can not believe the prices being paid for an original 520. I saw one on EBAY recently that was close to $400. I don't know if this is nostalgia or maybe related to that fact that due to the licensing changes there are more hams needing HF equipment. I recently found a 520s at a hamfest for $200 and it still does a good job on today's bands, but I don't think I would have paid $400 for it. I noticed that Yaesu 101 prices are starting to climb also.

From: "PB"
Subject: How Did He Do IT With Only 20 Seconds To Spare?

Jim
Do a search on ebay for the word snipe and set the price range between 8 and 40$ you will get back more than a 1/2 dozen programs for sniping auctions.
Snipe programs can enter your bid in the last 10 to 30 seconds and some can be set to increment your bid by a small amount in the last 5 to 10 seconds all without you even bring at the computer.
The more people that are bidding on a auction the more people it attracks. I would never place a bid letting everyone know that I wanted an item until the last few seconds.
By placing a bid during the auction, you are loudly proclaiming to other potential bidders, "Hey, everybody -- I want this item and I want it bad!" This gives other bidders plenty of time to re-think their own maximum bid, and to decide that they may be willing to pay an extra $5 or $10 dollars for the item. So the bidding goes up and up!

Good luck bidding
Port

> would be great I will pay just let me know how much.

Matt,

I don't have the manual, but here is some info from my "master card file"
that might be of interest to you... or someone else...

manual for SRR-13A is NAVSHIPS 92211
manual for SRR-13 is NAVSHIPS 91875A

unit works from 2 to 32 Mc (MHz) on cw, am and fsk
includes receiver R-441A
115VAC input
includes crystal calibrator
uses sub-miniature type tubes
important to have cabinet, as external connections are difficult otherwise
100 pounds
originally cost govt. $2400 each (in 1950s $$$)
in Oct. 1974 Edsall Surplus sold them for $175, with manual.

Greetings All

I realize this is slightly off-topic, but none of my tube gear was ready in time. Just participated in Field Day for the first time since 1956. Lots has changed, but the comraderie and fun mixed with a certain frantic energy are still there. Most encouraging were some young faces and their expressions as they made contacts in their first contest.

Anyone that thinks Amateur Radio is dying should try participating in this event, you'll get a whole different view. I served as gopher, generator gasser, beam rotator, roof leak fixer in the worst rain, and operator and logger. Looking forward to next year.

Source record: 64769
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I am trying to design a 6 meter linear. 6W is really tough to compete with. I settled on using 6146, several people have recommended this and I have received no comments on a solid state option. My current stumbling block is the -50V 1st Grid bias supply. Most of the time the grid bias is set the floating the cathode above ground. But 50V is a bit much. Kenwood uses a separate bias supply and I believe Heathkit does also. If I had a 12V filament supply I could use a voltage quadrupler, but the the supply is 6.3V and X8 is a bit much. I would like to not install a second transformer for this. Has anyone used a DC-DC converter (5V to 50V) to obtain a bias reference. This would be similar to Kenwood generating 28V in the TS-700's for the finals.

Many thanks in advance.

As far as the solid state option goes, one of our local hams (former radio service provider) mentioned once that quite a few no-tune hf solid state amps would work fine on 6. If you can find a cb'er with one get it away from him and back in ham hands. Those are often equipped with a low input setting which would match your six watt drive well.

As far as working with 6 watts goes, several years ago we had a radio at field day that put out 8 watts. Using a 3el beam we were able to work all over the western US from TX. When six is open you can do wonders with low power.
thanks, John.

I assume you're referring to the TS-830. I'm not aware of any 830s with
a gold case and gold trim on the control knobs. There were some with
gold labelling (TS-830) below the tuning knob.

Someone correct me if I am mistaken.

Yes indeed that is where you see it all (Field Day). And don't forget
about all the CW activity. Not bad for a dead mode.

Hello Johny, how you been? what time will you be arriving at Shelby? I haven`t decided yet ,possibly about Wed . I`ll be looking for you .. on the diode bias for the SB 220, series about 10 diodes rated at 400v @ 3 amps Radio Shack 1N5404 ..this will give you about 6 volts of bias .. you can tap the string to set idleing current but 6v should be all OK for pair 3-500s... I use this all along , you can get a good deal on Zeners at K2AW silicon alley adv in QST..

Field Day 2000!!!

Excellent CW activity including the Novice portions and good operators too!!!!! I ran my trusty Heath HW-8 with a lantern battery and about 1 watt output (at the most...hi). Used my old McElroy bug too.....Lots of fun!! Antenna is a simple zepp in the attic!

There was so much activity I need to build another CW filter to add to the audio filter in the rig!

CW is in no way fading out :-) I plan on doing my part and more to keep it that way!

Don't for get QRP too, lots of fun!

This is an extremely clean JOHNSON MATCHBOX - the smaller version that will handle up to 275 Watts. This is the perfect tuner for tuning open wire line or a single random-length wire antenna. It is in exceptionally nice condition cosmetically and it has not been modified as so many have been. There is no SWR meter. The knobs are not the original ones but are very nice sturdy DAKAWARE knobs that look and feel fine. I will be glad to e-mail anyone interested a picture that shows how nice this tuner is.

I am asking $110.00 plus UPS for this fine tuner. Please reply by e-mail if interested.

Cordially,

Michael Crestohl

Dennis,

Just take the voltage off one side of the high voltage winding of the transformer you are using for the plate and screen supply. Usa a 1N4007 or similar diode and feed the AC into the Cathode so that you get a negative voltage out. With the proper voltage divider and filtering you will be in business.

I think it great that you are interested in building. It seems that this is becoming increasingly rare these days. The 6146 will give you an easy 50 watts out on six meters.

I am in need of a manual on the Sunair GSE924 Exciter that I can buy,
copy or trade.
I have other Sunair manuals and need this one to round out my
collection.
I also have several Sunair GSL1900A 1 kw RF Amplifiers with their power
supply, connectors and manual.
If any one can assist me please respond directly.
I have recently updated our web site starting with HF Radio sets. a
great deal of info is now available for only a click.

1121. KWM2A Disaster

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-27 00:00:00 UTC
From: Leith Jennings <leejen@paradise.net.nz>
Message-ID: <962083621.354225@shelley.paradise.net.nz>
Source record: 64696

Hi all
I have just received a KWM2A from upstate NY. It was packaged in the CC-2 carrying case and securely packaged in a box. It must have been dropped and the case opened and the radio bounced around in the case on it's face for 14,000K. Hindsight is a wonderful thing and if the CC-2 had been tied or taped shut, the severe damage wouldn't have happened. However.... it's not a perfect world and !

I need help in locating the following parts for my basket case KWM2-A.....

1. A meter complete or a meter housing (The meter guts appears to be undamaged but the case is smashed)2. A main dial escutcheon plate (black phenolic with KWM-2A engraved on it)
3. A main tuning knob complete with finger inset.
4. A PA tuning knob.
5. The thin escutcheon plate that covers the band switching card.

I am pretty sure that I can remove and straighten the front panel.

Any help would be appreciated.

I have bought a Drake TR-4XC in Germany, connected to a dummy load and my daiwa wattmeter i measure 120W RF power on 80 meters , and about 100 W on 10 meters in CW. Is it regular or do you think that i have to plan to replace the final tubes?
Another question, do you suggest to mount a little fan to vent the rf stages?

bye

Your tubes are working well.
A little lower output on 10 is normal, even with new tubes.
As long as you have room around the rig for air to circulate,
they should be fine. Adding a fan just packs dust into the
RF area, eventually leading to arc-overs when the dust
gets too deep in the tuning caps. You could use a filtered
fan, but it really isn't needed.
Kind Regards,
Dave S. AB5S

FOR SALE
Replies sent to merz.ds@mellon.com will get faster response.

Military Navy Receiver Type RDR. Made by RCA with big RCA meatball logo on the front panel. This looks like a 10-channel VHF receiver. In cabinet with handles on sides and lid that screws-on. Cabinet has a lot of scuffs and scrapes. But the front panel is very good or better. I think this is unused. With original power cable. Must weigh 60 pounds. I'm guessing 1950's vintage. Very classy boatanchor. $70 I have JPG photo of an identical radio and some specs in a TIF file if anyone wants to see those.
Communications Equipment Company RHZ receiver. This is a fixed-frequency HF receiver designed for airport frequency monitoring. Crystal-controlled. Tuned to either 3105 kc or 3117 kc. Retunable to any nearby frequency with procedure given in manual. Will go to 80 meters with no coil mods and 160 meters with minor coil mods. This is a 19" rackmount radio, 5" high with simple black wrinkle front panel. Front panel is excellent. The cover has some scratches--some deep. Tube lineup is 80, 6V6, 4-6K7, 6K8, 6SJ7, 6H6 and 6SL7GT. With original manual: $50. Heavy.
Swan 14-X DC power supply module. Plugs into Swan 117X power supply and permits operation from 12VDC. One small rust spot around positive connection. Otherwise looks good. Untested. Unmodified. $25
Ampex 350 tape deck. Classic recording and radio station deck that used 1/4" magnetic tape and accomodates 15" or 7" reels. The 350 features excellent audio specs even 25 years later. The 350 model was available with many different head and electronics configurations including provision for using 1/2" tape. But this one is as basic as you can get. It's set up for glorious full-track monaural at either 7-1/2IPS or 3-3/4IPS. The record/play amp is a single solid-state Ampex unit model 4020251-05. Both deck and rec/play amp are 19" rackmount and take up 21" of rack space together. The deck and amp look very good or better and work very well. Comes with a homebrew remote control on a 25' cable. This thing is capable of marvelously musical recordings. But I just used it for off-air fooling around. With manual copy. $120. This is heavy and will cost $50-$60 to ship. JPG photos available on request to merz.ds@mellon.com
T-19/ARC-5 command set transmitter. WWII-era TX used in Navy aircraft. Covers 2-4MC. Requires 28vdc. This one is ham-modified with an SO-239 antenna connector and a 1/4" phone jack on the font panel. It is missing the final tubes and the final tube cover. The rear connector has been changed to a 5-pin tube socket. As-is. $18. For $10 more , I can include a pair of 1625 tubes.
T-22/ARC-5 command set transmitter. WWII-era TX used in Navy aircraft.

Covers 7-9.1MC. Requires 28vdc. 100% original except it is missing the crystal. Dirty. Has a couple paint chips. With all tubes. Nice. $44
R-23/ARC-5 command set receiver. WWII-era RX used in Navy aircraft. Covers 190-550kc. Requires 28vdc dynamotor which is not included. This is the one with the 3 antenna connections marked L, L and A, plus the antenna switch marked A--L. Appears to be all original except for terminal strip mounted on dynamotor studs on rear. This was done so as to be easily removed. But there's solder on the dynamotor pins. No unoriginal holes. Good paint. With original FT-230 dummy box on front panel. Nice. $34
R-23A/ARC-5 command set receiver. Korean-war-era RX used in Navy aircraft. Covers 190-550kc. Requires 28vdc dynamotor. This is the one with the 3 antenna connections marked L, L and A, plus the antenna switch marked A--L. Appears to be all original except that the 2 front panel studs used to hold the radio into a rack have been removed. Missing FT-230. Requires 28V dynamotor which is not included. Stamps on front panel say "27-OH 6 1954"and an unreadable logo in a pair of wings with the mark "A-15" below them. $34
BC-454B command set receiver. Part of the Army command set rig SCR-274N. Used in Army aircraft. Bare aluminum case (unlike ARC-5 radios which are black wrinkle). Covers 3-6MC. All original. Very dirty with lots of little dents in the case (not on the front panel). With original FT-230. One clasp on the tube cover is broken. Easily restored. Made by Western Electric. $38
Lysco Model 129 Mobile transmitter for 10 and 11 meters. 1950-vintage mobile AM TX that is tiny. Used 3 6AG7 tubes. Requires 350VDC and 6.3V. Some chips on paint but excellent overall condition. Pilot lamp has been changed to unoriginal lamp using original hole--easily returned to original if you don't like it (though it looks fine and is tough to spot). With manual copy. Neato. $40

Thanks.

1140. Beware of Dick Burke

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-27 00:00:00 UTC
From: richcom@earthlink.net
Message-ID: <395d3657.13186675@news.earthlink.net>
Source record: 64715

He goes under two emails: n1rsp@qsl.net & toby@gis.net

I replied to a post regarding two laptops. Dick told me they had two batteries and no power cords. He told me they did not have built in mouses but would supply a mouse for one. I said fine for $85. He would only accept Cashier's Check. Everything was his way.

After my cc was in the mail, he emails me the next day, Sunday, telling me, oops, sorry only one battery. But I'm throwing in the mouse. Well, the mouse was already in the original deal. So now for my money I'm only getting one battery where I was purchasing TWO.

Now it's not a deal anymore. So I quickly emailed him back and told him that I did not want the deal anymore and to please send back my cashiers check when it arrived.

To verify it, I phoned him on Monday, because NOW he's ignoring my emails. His wife rudely spoke to me and acted stupid. She didn't know where he was or when she would see him. That was the second hint that I was dealing with unscrupulous people.

What a pair! They deserve each other.

So I phoned again that evening and the phone was busy and still no emails.

The next day, he decides to tell me that my check was immediately deposited and my computers were in the mail. WOW, isn't that something, he takes my money and sends me what he wants, which is a lesser deal than agreed upon.

His emails became very foul and abusive. So I am now dealing with a trashy mouthed person. I'm out the $85 but I hope this is a warning to others before dealing with such garbage.

If anyone wants to see his nasty emails. Let me know, I'll send them to you.

I was a gentleman through the whole deal. Something that he can't say

about himself.

So BEWARE of trashy, crooked, lying DICK BURKE.

The moral of the story is: he misrepresented his items, took the money and ran!

He decided to change the deal and I am stuck with it. Is that fair to

anyone out there? You decide.

I need a couple of 1000 or 2000 mmf 30 kv doorknob style capacitors.
They were used in early color TV sets with metal picture tubes. Anyone
have any?

Thanks

Steve McVoy

Who is the manufacturer, are these 3RP1As, and is the face round or flat?
(It does make a difference)

1157. WANTED: Transmitter info

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-27 00:00:00 UTC
From: Gary Knight <gknight7@gte.net>
Message-ID: <75U55.93$I23.6786@dfiatx1-snr1.gtei.net>
Source record: 64791

Call me crazy ("you're CRAZY") but I want to operate separates. That's the way it was in the old days, and now that I have my ticket back after a few intervening decades, I'd like to pick up where I left off. Have a Drake R8B with which I'm well impressed -- very fine receiver (especially those 5 touch-of-a-button filters, even if they are LCs). But where are the transmitters?

Question: When were the last transmitter manufactured -- date, manufacturer, model number. And any info, comments, recommendations, etc. on any of same. And other than swaps or eBay, any particular sources for acquiring them?

Prefer direct e-mail, but post to newsgroup if you like.

Thanks,

Gary
KD5KQW (excellent excuse for a vanity call, no?)

National main tunining or band switch knob. It is a approx. 2-3/8 inches in diameter and fluted on the edge. I am restoring a WW2 RAO receiver but it looks like National used this knob on a several models ie. NC-100xa, NC-45, NC-200 and probably many more. I found this this bit of history thrown out on the street on yard clean up day. It had a bad power transformer and had been partially junked out. It is turning into real project! Thank you for taking the time to read this.
Skip Tyson, K6YRZ

Most of the AM activity is between 29.0 and 29.1 mhz. I often
call CQ on 29.020 MHZ. Hope to hear you on!

Usually the calling frequency for AM on 10 meters is 29.00mcs but it is not a
working frequency.

Subject: 10M AM Calling Frequency??

I've heard 29.000 used as the calling freq. with working freqs up to 29.200 but
most activity in the first 100 khz.

Too bad the band has not opened a lot recently.

Try the following. Great web site for the 19 set. It shows what's for sale
and what is needed. Also notes the 2 WS 19 nets, times and frequencies.

From: Brad Thompson
Subject: 7984s, back issues Ham Radio mag, anyobe?

Hello--

Can anyone use a batch of 7984 tubes? Two NOS/boxed (1 GE, 1 Dumont)
and five unboxed/pulls (all have shiny getters-- one looks a little
pale).
$12.00 buys the batch of seven, plus $4.00 priority mail postage (U.S.).

The following magazines are available-- all are in G+ to VG condition
(contents intact, but obviously read and appreciated) except as noted:

Ham Radio; $1.00 each
April 81
June 83
July 83
August 83
September 83
October 83
November 83
January 84
March 84
March 90 missing its front cover
May 90

Add $2.25 for book-rate postage (U.S.) for any quantity of the
magazines.

73,
Brad AA1IP

Do you need the AN/ARC-5 rack or the SCR-274N rack for
your transmitters? They have different connectors.
If your transmitters are BC-4xx, you need a 274N rack.

FOR SALE
Replies sent to merz.ds@mellon.com will get faster response.

Military Navy Receiver Type RDR. Made by RCA with big RCA meatball logo
on the front panel. This looks like a 10-channel VHF receiver. In
cabinet with handles on sides and lid that screws-on. Cabinet has a
lot of scuffs and scrapes. But the front panel is very good or
better. I think this is unused. With original power cable. Must
weigh 60 pounds. I'm guessing 1950's vintage. Very classy
boatanchor. $70 I have JPG photo of an identical radio and some
specs in a TIF file if anyone wants to see those.
Communications Equipment Company RHZ receiver. This is a fixed-
frequency HF receiver designed for airport frequency monitoring.
Crystal-controlled. Tuned to either 3105 kc or 3117 kc. Retunable to
any nearby frequency with procedure given in manual. Will go to 80
meters with no coil mods and 160 meters with minor coil mods. This
is a 19" rackmount radio, 5" high with simple black wrinkle front
panel. Front panel is excellent. The cover has some scratches--some
deep. Tube lineup is 80, 6V6, 4-6K7, 6K8, 6SJ7, 6H6 and 6SL7GT. With
original manual: $50. Heavy.
Swan 14-X DC power supply module. Plugs into Swan 117X power supply and
permits operation from 12VDC. One small rust spot around positive
connection. Otherwise looks good. Untested. Unmodified. $25
Ampex 350 tape deck. Classic recording and radio station deck that used
1/4" magnetic tape and accomodates 15" or 7" reels. The 350 features
excellent audio specs even 25 years later. The 350 model was
available with many different head and electronics configurations

including provision for using 1/2" tape. But this one is as basic as you can get. It's set up for glorious full-track monaural at either 7-1/2IPS or 3-3/4IPS. The record/play amp is a single solid-state Ampex unit model 4020251-05. Both deck and rec/play amp are 19" rackmount and take up 21" of rack space together. The deck and amp look very good or better and work very well. Comes with a homebrew remote control on a 25' cable. This thing is capable of marvelously musical recordings. But I just used it for off-air fooling around. With manual copy. $120. This is heavy and will cost $50-$60 to ship. JPG photos available on request to merz.ds@mellon.com

T-19/ARC-5 command set transmitter. WWII-era TX used in Navy aircraft. Covers 2-4MC. Requires 28vdc. This one is ham-modified with an SO-239 antenna connector and a 1/4" phone jack on the font panel. It is missing the final tubes and the final tube cover. The rear connector has been changed to a 5-pin tube socket. As-is. $18. For $10 more , I can include a pair of 1625 tubes.

T-22/ARC-5 command set transmitter. WWII-era TX used in Navy aircraft. Covers 7-9.1MC. Requires 28vdc. 100% original except it is missing the crystal. Dirty. Has a couple paint chips. With all tubes. Nice. $44

R-23/ARC-5 command set receiver. WWII-era RX used in Navy aircraft. Covers 190-550kc. Requires 28vdc dynamotor which is not included. This is the one with the 3 antenna connections marked L, L and A, plus the antenna switch marked A--L. Appears to be all original except for terminal strip mounted on dynamotor studs on rear. This was done so as to be easily removed. But there's solder on the dynamotor pins. No unoriginal holes. Good paint. With original FT-230 dummy box on front panel. Nice. $34

R-23A/ARC-5 command set receiver. Korean-war-era RX used in Navy aircraft. Covers 190-550kc. Requires 28vdc dynamotor. This is the one with the 3 antenna connections marked L, L and A, plus the antenna switch marked A--L. Appears to be all original except that the 2 front panel studs used to hold the radio into a rack have been removed. Missing FT-230. Requires 28V dynamotor which is not included. Stamps on front panel say "27-OH 6 1954"and an unreadable logo in a pair of wings with the mark "A-15" below them. $34

BC-454B command set receiver. Part of the Army command set rig SCR-274N. Used in Army aircraft. Bare aluminum case (unlike ARC-5 radios which are black wrinkle). Covers 3-6MC. All original. Very dirty with lots of little dents in the case (not on the front panel). With original FT-230. One clasp on the tube cover is broken. Easily restored. Made by Western Electric. $38

Lysco Model 129 Mobile transmitter for 10 and 11 meters. 1950-vintage mobile AM TX that is tiny. Used 3 6AG7 tubes. Requires 350VDC and 6.3V. Some chips on paint but excellent overall condition. Pilot lamp has been changed to unoriginal lamp using original hole--easily returned to original if you don't like it (though it looks fine and is tough to spot). With manual copy. Neato. $40

Thanks.

From: richcom@earthlink.net (richcom)
Subject: Beware of Dick Burke

He goes under two emails: n1rsp@qsl.net & toby@gis.net

I replied to a post regarding two laptops. Dick told me they had two batteries and no power cords. He told me they did not have built in mouses but would supply a mouse for one. I said fine for $85. He would only accept Cashier's Check. Everything was his way.

After my cc was in the mail, he emails me the next day, Sunday, telling me, oops, sorry only one battery. But I'm throwing in the mouse. Well, the mouse was already in the original deal. So now for my money I'm only getting one battery where I was purchasing TWO.

Now it's not a deal anymore. So I quickly emailed him back and told him that I did not want the deal anymore and to please send back my cashiers check when it arrived.

To verify it, I phoned him on Monday, because NOW he's ignoring my emails. His wife rudely spoke to me and acted stupid. She didn't know where he was or when she would see him. That was the second hint that I was dealing with unscrupulous people.

What a pair! They deserve each other.

So I phoned again that evening and the phone was busy and still no emails.

The next day, he decides to tell me that my check was immediately deposited and my computers were in the mail. WOW, isn't that something, he takes my money and sends me what he wants, which is a lesser deal than agreed upon.

His emails became very foul and abusive. So I am now dealing with a trashy mouthed person. I'm out the $85 but I hope this is a warning to others before dealing with such garbage.

If anyone wants to see his nasty emails. Let me know, I'll send them to you.

I was a gentleman through the whole deal. Something that he can't say

about himself.

So BEWARE of trashy, crooked, lying DICK BURKE.

The moral of the story is: he misrepresented his items, took the money and ran!

He decided to change the deal and I am stuck with it. Is that fair to

anyone out there? You decide.

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and
also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $395 each plus shipping.

From: n6kb@fix.net (Ken Brown)
Subject: Collins TCS For Sale

I have a nearly complete (no control boxes) Collins TCS radio set for sale. The RX is gray and the TX is black. So I suppose you could say that they don't match. They work though and I have the AC power supply and interconnecting cables. I understand the AC power supply is fairly rare, as dynamotor power supplies were the usual set-up. I don't want to even consider shipping this set. It is just too heavy and to much work to properly pack them. So if you want the set you'll have to pick it up in San Luis Obispo. E-mail me at n6kb@juno.com if you're interested and want to make an offer.

Subject: FA: Collins PM-2 AC Power Supply for KWM-2/2A Item #363726724

Collins PM-2 "Lightweight" A-C Power Supply for the KWM-2/2A Transceiver in Good working condition. The original owner made some cutouts in the rear chassis cover (what was he thinking?). I recently acquired it with an a KWM-2 that I am restoring and will be powering with a 516F-2. Included is an original manual that I got with the unit.
It is heavy for shipping at about 14 lbs. Buyer pays for a heavy corrugated box and bubble wrap ($2.50) plus actual shipping for FedEx 3 day or USPS (I do not use UPS here, too much damage). U.S. sales only please.

Subject: Field Day

Greetings All

I realize this is slightly off-topic, but none of my tube gear was ready in time. Just participated in Field Day for the first time since 1956. Lots has changed, but the comraderie and fun mixed with a certain frantic energy are still there. Most encouraging were some young faces and their expressions as they made contacts in their first contest.

Anyone that thinks Amateur Radio is dying should try participating in this event, you'll get a whole different view. I served as gopher, generator gasser, beam rotator, roof leak fixer in the worst rain, and operator and logger. Looking forward to next year.

Yes indeed that is where you see it all (Field Day). And don't forget
about all the CW activity. Not bad for a dead mode.

Subject: Field Day

Field Day 2000!!!

Excellent CW activity including the Novice portions and good operators too!!!!!
I ran my trusty Heath HW-8 with a lantern battery and about 1 watt output (at
the most...hi). Used my old McElroy bug too.....Lots of fun!! Antenna is a
simple zepp in the attic!

There was so much activity I need to build another CW filter to add to the
audio filter in the rig!

CW is in no way fading out :-) I plan on doing my part and more to keep it that
way!

Don't for get QRP too, lots of fun!

Subject: for sale, GONSET: SIDEWINDER ssb am cw

i have a complete [not working] gonset sidewinder 2 meter tranciever. its all
there and the power-supply seems to work as it powers up the rig.....but it
does nothing. oh the lights come on but no receive or transmit. there are a
couple of tubes in there, maybe there bad, i dont know. this is a 144 to 148
mhz ssb, am, and cw tranceiver. the complete manual is included with this set.
if your handy and can trouble shoot this thing it would make a very nice
vintage set-up. if your familiar with the rig you know it's not very large but
it does weigh about 25 pounds so packing and shipping will cost around $20.00
if anyone is interested i will take $40.00 and that will include the shipping
any where in the lower 48 states. thanks in advance & 73.....george

Hi George,
I'll take the sidewinder if still available AND the front panel is in nice shape.
I live in N.C. Let me know on how you would like payment.

From: mc@REMOVE.sover.net (Michael Crestohl)
Subject: FS: Johnson 275 Watt MATCHBOX

This is an extremely clean JOHNSON MATCHBOX - the smaller version that will handle up to 275 Watts. This is the perfect tuner for tuning open wire line or a single random-length wire antenna. It is in exceptionally nice condition cosmetically and it has not been modified as so many have been. There is no SWR meter. The knobs are not the original ones but are very nice sturdy DAKAWARE knobs that look and feel fine. I will be glad to e-mail anyone interested a picture that shows how nice this tuner is.

I am asking $110.00 plus UPS for this fine tuner. Please reply by e-mail if interested.
